# ES-1 Executive Summary

This executive summary highlights the key components of the 2050 Long-Range Transportation Plan for Troup County, Georgia. This summary provides an overview of the chapters covered in the plan, including key maps and figures that summarize major components of the plan such as agency and stakeholder involvement, existing and future conditions analyses, identified projects, and funding opportunities and next steps.

### ES-1.1 Plan Purpose

The *Troup County Long-Range Transportation Plan* identifies projects based on existing and forecasted future conditions of the transportation network through the year 2050. Freight is an important element of the plan, and freight travel patterns were evaluated, including effects on downtown LaGrange. Identified projects reflect the anticipated growth in population and employment within the county, particularly growth related to freight-related land use, such as manufacturing and distribution.

## ES-1.2 Agency Involvement

The plan was developed with robust input from a variety of stakeholder agencies. The plan was led by the Project Management Team (PMT), comprised of participants from GDOT, Troup County, the City of LaGrange, and the consulting team. The Advisory Committee (AC) encompassed key stakeholders who provided guidance and feedback at three key milestones throughout the process. An example of an Advisory Committee meeting workshop is shown in **Figure ES-1**. The AC members include:

- 1. GDOT Office of Planning and District Three
- 2. Troup County
- 3. City of LaGrange
- 4. City of Hogansville
- 5. City of West Point
- 6. Three Rivers Regional Commission
- 7. Downtown LaGrange Development Authority
- 8. West Point Development Authority
- 9. Hogansville Downtown Development Authority
- 10. LaGrange-Troup County Chamber of Commerce
- 11. Troup Transit
- 12. Kia Motors Manufacturing
- 13. Troup County School System
- 14. Georgia Ports Authority

#### **Executive Summary**

Figure ES-1: Example of an Advisory Committee Meeting Workshop

The AC was integral in developing the plan's goals and objectives, which reflect what the plan aims to achieve. The previous (2006) plan's goals were presented and refined based on feedback received during the first AC meeting and to align with the 2021 Georgia's Statewide Strategic Transportation Plan (SSTP) Framework. The updated goals and objectives are shown in **Figure ES-2**.

#### Goals & Objectives were updated based Study Goals and Objectives on Advisory Committee input Promote connectivity and accessibility Address existing and future traffic congestion Maintain and optimize use of existing Maintain existing transportation facilities infrastructure Promote safe and efficient movement of Reduce transportation-related crashes, injuries, and deaths. people and goods Provide for non-vehicular modes, such as **biking**, walking, and transit in relevant locations, as supported by land use patterns and demand. Provide a range of mobility options Align transportation infrastructure with current Improve connectivity and accessibility between major travel destinations and future land use and population and employment concentrations, and freight generators Incorporate green infrastructure, storm water management, and energy Promote the health of people and the natural conservation into transportation projects. Consider the overall social, land environment use compatibility, economic, energy, and environmental impacts of projects.

In addition to the PMT and AC meetings, the planning team also coordinated with teams working on ongoing studies including the Georgia Freight Plan and the LaGrange Bypass Scoping Study. The team also held separate meetings

with the Georgia Ports Authority (GPA) and Kia Motors Manufacturing due to their anticipated growth and expansion plans in the region. These meetings provided valuable insight to better understand the changes within Troup County and the development plans of these entities, which were used to inform the planning process, recommendations, and future infrastructure plans.

# ES-1.3 Demographic Information

The demographic analyses include population, income, employment, and social equity. Troup County is home to several industrial developments, including the forthcoming West Central Inland Port. The county had a population of 69,400 in 2020.<sup>1</sup> Troup County's population was 0.7% of Georgia's total population. There were 30,400 employed residents and a total of 38,300 jobs in Troup County, which is 0.9% of all jobs in the state. Key demographics are summarized in **Figure ES-3**.

Figure ES-3: Existing (2020) Demographics

Manufacturing makes up the largest portion (30%) of employment sectors within Troup County, highlighting the importance of freight transportation in the area. The county's top five employment sectors, comprising of nearly 70% of the county's total employment, are outlined in **Figure ES-4**.

<sup>1</sup> American Community Survey (ACS), 5-Year Estimates (2016-2020) www.arcadis.com

Figure ES-4: Employment Sectors

Past and projected future population and employment growth are shown in **Figure ES-5**. The average annual growth rate for population is 0.78%, and the average annual employment growth is 1.69%. By 2050, Troup County population is expected to reach 86,700 (0.5% of Georgia's projected 2050 population) and employment will reach 64,600 (0.7% of Georgia's projected 2050 employment).

#### **Past and Projected Population & Employment Growth**

Figure ES-5: Past & Projected Population & Employment

#### **Executive Summary**

Troup County includes diverse demographics and socioeconomic conditions. Social equity was assessed based on three data sources: the Federal Justice40 Initiative, Environmental Protection Agency's Environmental Justice Screen (EPA EJScreen), and the Centers for Disease Control and Prevention's Social Vulnerability Index (CDC SVI).

The Justice40 Initiative, authorized under Executive Order 14008 and signed on January 27, 2021, aims to deliver 40% of all benefits of federal investments in sustainable transportation to disadvantaged communities. As the map in **Figure ES-6** shows, 11 of the 18 Census tracts in the county are considered disadvantaged. These Census tracts comprise 61% of the county. The Justice40 disadvantaged areas, under federal initiative, are prioritized for federal spending, including discretionary grants. For some federal funding sources, the federal share could provide up to 100% funding for projects identified in historically disadvantaged communities.

Figure ES-6: Transportation-Disadvantaged Communities

Data Source: USDOT Equitable Transportation Community Explorer, 2023

### ES-1.4 Land Use and Development

Land use is critical in understanding the transportation improvements needed to support future growth and development. The county and city comprehensive plans were reviewed to assess land use and development patterns. Additionally, major planned and potential development sites were identified that could have substantial effects on the transportation system, including Developments of Regional Impact (DRIs) and other planned

www.arcadis.com

developments. The anticipated population and employment associated with planned developments were incorporated into the travel demand model to reflect future travel patterns and volumes more accurately.

### ES-1.5 Review of Existing Studies, Plans, and Documents

All relevant statewide, countywide, and city-level plans were reviewed to explore past recommendations for Troup County's transportation future, including:

- Statewide Plans
  - GDOT 2021 Statewide Strategic Transportation Plan: 2050 Statewide Transportation Plan (SSTP/SWTP)
  - o GDOT Statewide Transportation Improvement Program (STIP FY 2024-2027)
  - o GDOT Statewide Transit Plan (2022)
  - o GDOT Georgia 2050 Rural and Human Services Transportation Plan (2023)
  - GDOT Bicycle Safety Action Plan (2018)
  - o GDOT Pedestrian Safety Action Plan (2018-2022)
  - GDOT Georgia Freight Plan (2023)
  - o GDOT Statewide Air Cargo Study (2022)
- Countywide Plans
  - Troup County Multi-Modal Transportation Study (2006)
  - Troup County Comprehensive Plan (2021-2041)
- Citywide Plans
  - City of Hogansville Comprehensive Plan Update (2021)
  - o City of LaGrange Comprehensive Plan (2021-2041)
  - o City of West Point Comprehensive Plan Update (2021-2040)
  - LaGrange Gateway Corridors Plan (2016)

## ES-1.6 Assessment of Existing Transportation Facilities

The assessment of the current conditions of the transportation system included safety, roadway operating conditions, bridge and pavement, freight, bicycle and pedestrian infrastructure, public transportation, and aviation.

#### **Executive Summary**

#### Safety

The heatmap in **Figure ES-7** shows the distribution of all recorded crashes that occurred not on an interstate. Areas in red have a denser concentration of crashes, while areas in green have a sparser concentration. Of those non-interstate crashes, 0.7% involved a pedestrian, 0.2% involved a bicycle, 1.7% resulted in at least one serious injury, and 0.4% were fatal. The highest densities of non-interstate crashes are in the cities of LaGrange and West Point. Some of the highest crash locations are seen at intersections along US 27, US 29, SR 100, and SR 109.

Figure ES-7: Crash Locations Heatmap

Data Source: GDOT Numetric, 2017-2021

#### **Roadway Operating Conditions**

Level of Service is a measure of roadway traffic congestion on a scale from A (free flow conditions) to F (gridlock) as shown in **Figure ES-8**. It is based on the ratio of traffic volume to roadway capacity (number of travel lanes). While there are some limitations to the use of volume to capacity ratios for assessing traffic congestion, this approach is common in planning studies to provide an approximation of roadway traffic congestion. In Troup County, most roadways operate at LOS C or better. However, there are some areas of higher congestion, as indicated in the 2020 existing travel demand model and in stakeholder input, such as I-85, US 27/Hamilton Road, US 29/Vernon Street, SR 219/ Mooty Bridge Road, and SR 109/ Greenville Road/Lafayette Parkway. The typical threshold for an acceptable LOS is D or better in urban areas and LOS C or better in rural areas.

Figure ES-8: 2020 Daily Level of Service

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset)

#### **Bridge & Pavement Conditions**

Maintenance of bridge and pavement conditions is essential to the safe and efficient movement of people and goods. There are 168 bridges in Troup County, as identified by the Federal Highway Administration (FHWA) in its 2023 National Bridge Inventory (NBI). Of these bridges, 96 (57%) are GDOT owned and maintained, 71 (42%) are city or county owned, and one (<1%) is privately owned. **Figure ES-9** shows bridge conditions based on the 2023 NBI data. Three bridges are shown as poor condition in the study area; however, none of them are on state routes or the National Highway System (NHS).

Figure ES-9: Existing Bridge Conditions

Data Source: NBI, 2023

Most roads in the county are in good or fair condition, according to the 2019 federal Highway Performance Monitoring System (HPMS). Road segments with poor pavement conditions are in the City of LaGrange, several locations along I-85, Lower Big Springs Road, and Stovall Road.

#### **Executive Summary**

#### Freight

Freight is an essential element of the transportation system, particularly in Troup County where manufacturing makes up nearly one-third of jobs. There are several manufacturing facilities, warehouses, and distribution centers located within Troup County. Some of the larger facilities are Kia Motors, Walmart Distribution Center, Duracell, Weiler, Milliken, Interface, Sewon, and Badcock. Most of the freight-related land uses are concentrated along the I-85 corridor through LaGrange and West Point. According to Freight Analysis Framework (FAF) Version 5, the highest average daily truck trips occur on I-85, I-185, US-27, SR 109, and SR 219, as shown in **Figure ES-10**.

Figure ES-10: Average Daily Truck Trips in 2022

Data Source: Freight Analysis Framework Version 5

#### **Bicycle & Pedestrian Infrastructure**

Although bicycle and pedestrian travel make up a small portion of transportation in the county, it is important to ensure that safe and adequate facilities are available to those not using a vehicle. The downtown areas in LaGrange, Hogansville, and West Point have sidewalks on at least one side of many but not all streets, and crosswalk markings and pedestrian signals are present at some intersections. Dedicated bicycle lanes are provided along a few roadways such as County Club Road, Youngs Mill Road, and Calumet Center Road in LaGrange. Otherwise, dedicated on-street bicycle facilities are not prevalent across the county. The Thread Trail is a paved urban, multiuse trail that will ultimately form a 30-mile rail network extending beyond the downtown core to surrounding communities and destinations. Several sections are currently open or being constructed, as shown in **Figure ES-11**.

Figure ES-11: The Thread Trail

Data Source: TheThreadTrail.org

#### **Public Transportation**

Troup County offers demand response public transportation service through Troup Transit. This is a program that is offered by Troup County Parks and Recreation and gives priority to elderly individuals as well as individuals with disabilities. **Figure ES-12** shows information relating to Troup Transit's average ridership, vehicles, and expenses between FY 2019 and FY 2021 from the National Transit Database (NTD).

Figure ES-12: Troup Transit Facts, FY 2019-2021 Averages

Data Source: National Transit Database, FY 2019-2021

#### **Executive Summary**

#### Aviation

There is one publicly operated airport in Troup County, which is the LaGrange-Callaway Airport. The airport is located three miles from the heart of the City of LaGrange (**Figure ES-13**). The airport currently serves the needs of general and business aviation users and operates two runways and forty hangars throughout its concourse. In 2021, the airport had 15,100 aircraft operations, with 99% as general aviation and 1% as military aviation.

Figure ES-13: Airport

## **ES-1.7** Future Conditions and Potential Improvements

The future conditions analysis focuses on opportunities for improvements throughout the transportation system. One of the key components is the future travel demand model analysis. This analysis takes into account the future population and employment forecasts and associated vehicular trips on the roadway network to project future roadway operating conditions if no additional roadway projects are constructed (beyond those already planned for construction within the next three years). Two future baseline years were evaluated: 2035 and 2050, as shown in **Figure ES-14** and **Figure ES-15**.

Figure ES-14: 2035 Baseline Level of Service, Daily

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), with socioeconomic data updated based on stakeholder input

Figure ES-15: 2050 Baseline Level of Service, Daily

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), with socioeconomic data updated based on stakeholder input

# ES-1.8 Identified Projects

The result of the planning process is a list of identified transportation projects based on the review of previous and existing plans, analysis of existing conditions, stakeholder input, and assessment of potential improvements based on the expected future conditions. **Figure ES-16** provides a summary of the identified projects.

Figure ES-16: Summary of Identified Projects

#### **Executive Summary**

The map of all identified projects (**Figure ES-17**) shows a concentration of projects along state routes in and around the City of LaGrange, City of Hogansville, and City of West Point. Capacity projects provide increased access through the county and between each of the cities, while intersection and bicycle or pedestrian projects are located in areas of high-density land use, such as downtown LaGrange.

Figure ES-17: All Identified Projects

# ES-1.9 Project Evaluation

The project evaluation framework uses qualitative and quantitative measures to demonstrate how well projects align with the plan's stated goals and objectives and demonstrates each project's need and validity for funding and project implementation. **Table ES-1** summarizes the plan goals and the associated evaluation measures, and their applicability to each project type.

| Goal   | Objective   | Evaluation Measure  | Capacity | Intersection | Bridge | Bike/Ped | Freight | Railroad | Transit | Study |
|--|---|---|----------|--------------|--------|----------|---------|----------|---------|-------|
| Promote<br>connectivity and<br>accessibility                                     | Address existing and future traffic congestion  | Project reduces congestion or<br>improves bridges on the<br>roadway network   | Y        | Y            | Y      | Y        | N       | Y        | Y       | Y     |
|  |   | Project improves freight<br>movement on national or state<br>freight routes   | Y        | Y            | Y      | N        | Y       | Y        | N       | Y     |
| Maintain and<br>optimize use of<br>existing<br>infrastructure                    | Maintain existing transportation facilities   | Project improves existing transportation facilities   | Y        | Y            | Y      | Y        | Y       | Y        | Y       | Y     |
| Promote safe and<br>efficient<br>movement of<br>people and goods                 | Reduce transportation-<br>related crashes, injuries,<br>and deaths  | Project is expected to reduce<br>crashes, improve infrastructure<br>safety at an intersection or<br>along a corridor, or increase<br>efficiency of movement through<br>transit. | Y        | Y            | Y      | Y        | Y       | Y        | Y       | Y     |
| Provide a range<br>of mobility options   | Provide for non-vehicular<br>modes, such as biking,<br>walking, and transit in<br>relevant locations, as<br>supported by land use<br>patterns and demand        | Project includes or enables<br>bicycle, pedestrian, and/or<br>transit improvements in or near<br>an activity center   | Y        | N            | N      | Y        | N       | N        | Y       | Y     |
|  |   | Project provides access and<br>connections to existing or<br>planned trails   | N        | N            | N      | Y        | N       | Ν        | N       | Y     |
| Align<br>transportation<br>infrastructure with<br>current and future<br>land use | Improve connectivity and<br>accessibility between<br>major travel destinations<br>and population and<br>employment<br>concentrations, and<br>freight generators | Project improves connectivity to<br>key activity centers, including<br>freight-related land uses  | Y        | Y            | N      | Y        | Y       | Y        | Y       | Y     |
| Promote the<br>health of people<br>and the natural<br>environment                | Incorporate green<br>infrastructure, storm<br>water management, and<br>energy conservation into<br>transportation projects                                      | Project incorporates green infrastructure or sustainability   | Y        | Y            | Y      | Y        | Y       | Y        | Y       | Y     |
|  | Consider the overall<br>social, land use<br>compatibility, economic,<br>energy, and<br>environmental impact of<br>projects                                      | Project preserves the County's<br>natural areas   | Y        | N            | N      | Ν        | Y       | Y        | Ν       | Y     |
|  |   | Project minimizes air quality<br>impacts of transportation  | Y        | Y            | N      | Y        | Y       | Y        | Y       | Y     |

# **ES-1.10** Environmental Screening

A desktop environmental screening was performed to determine each project's proximity to natural (e.g., wetlands), cultural (e.g., National Register of Historic Places [NRHP] eligible or listed properties), and social (e.g., community resources) environmental resources using a 500-foot buffer. The purpose of this analysis was to determine the potential complexity of the environmental clearance process for each identified project. An example of the analysis performed for each project is shown in **Figure ES-18**.

Figure ES-18: Project C-10 Environmental Screening

Of the approximately 97 projects that were screened for environmental resources, 90 of those are within a Justice40 Disadvantaged Community U.S. Census Bureau Census tract and/or a U.S. Census Bureau block group that was identified as having higher low-income populations than Troup County and the State of Georgia. Additional desktop research and windshield surveys would be required for programmed projects located within these Census tracts and/or block groups to identify potential Environmental Justice (EJ) communities. If EJ communities are identified within a project area, the decision-making process may include coordination with community leaders, community engagement through public involvement, and an evaluation of the project's potential to impacts to these communities. The evaluation should consider how the communities are affected by changes to access, displacements or significant right-of-way (ROW) takes, alterations to traffic patterns, increased community isolation, impacts to community cohesion, or other issues of community concern and controversy. Efforts to avoid and

minimize impacts to Environmental Justice communities must be considered as part of the federally required National Environmental Policy Act (NEPA) process.

# ES-1.11 Funding

Troup County has historically received funding from federal, state, and local-level agencies to finance roadway, transit, and active-transportation-related projects. The funding sources can be applied to identified projects as appropriate based on the criteria set for each funding program. Most of the funding for transportation projects in Troup County is from federal funding provided through GDOT, often with a percentage match required from local sources. Many of the identified projects are eligible for federal discretionary grants, as well.

#### **Federal Funding**

Federal funding comes primarily from FHWA and Federal Transit Administration (FTA) formula funds, which are apportioned at the state and regional levels. The current federal transportation funding authorization legislation is the Infrastructure Investment and Jobs Act (IIJA), also known as the Bipartisan Infrastructure Law (BIL), which provides funding for federal fiscal years 2022 through 2026. In addition to formula funds, the BIL also includes several discretionary grant programs that applicants such as cities, state DOTs, and metropolitan planning organizations (MPOs) can request through a competitive application process.

#### State Funding

GDOT facilitates the allocation of funding received from most federal funding programs and is responsible for statewide distribution to all congressional districts for use in federal, state, and local level projects. The funding plan is outlined in the STIP document that is updated every 4 years. The FY 2024 – 2027 STIP indicates that there is \$1.6 billion allocated for state highway projects, of which \$1.35 billion is put towards federal matching, statewide. There are several sources of state funding, including the motor fuels state tax and special diesel fuel tax. The fuel taxes can only be used for roadway and bridge projects, so other project types can be financed through other sources and funding programs.<sup>2</sup> GDOT also provides funding for transit through the Transit Trust Fund Program (TTFP) which can be used for any transit related project that will help support or expand the network.<sup>3</sup>

#### Local Funding

Cities and counties fund projects from a variety of sources, but the primary locally generated sources or "own source" funds come from sources such as property and sales tax revenues. The Special Purpose Local Option Sales Tax (SPLOST) is a primary local funding source for transportation projects. Troup County's current SPLOST (SPLOST V) is for the six-year period beginning January 1, 2019 through 2024 and is expected to generate approximately \$70 million dollars. Troup County SPLOST funds are an essential source of locally controlled funding for transportation projects and can provide the required local match to state and federal funds and to leverage those larger funding sources, advancing projects more quickly. Troup County also has two Tax Allocation Districts (TADs) – the Gateway TAD and the Mill Creek TAD that generate revenue for those areas.<sup>4</sup>

## **ES-1.12** Conclusions

The *Troup County Long-Range Transportation Plan* should serve as the foundation for Troup County's transportation planning efforts and a starting point for addressing transportation opportunities. It should be reviewed and updated periodically to incorporate the latest data and to ensure that the plan's assumptions and projects effectively address the county's transportation opportunities.

# **1** Introduction

The *Troup County Long-Range Transportation Plan* is a long-range planning study to identify future transportation investments within the county. The plan was developed through coordination among Troup County, the cities of LaGrange, Hogansville, and West Point, the Georgia Department of Transportation (GDOT), a stakeholder Advisory Committee, and a consulting team comprised of Arcadis and Modern Mobility Partners. This report documents the planning process, demographic data, existing and future operating conditions for the transportation system, multi-modal transportation projects, environmental screening of projects, and a project funding summary.

# 1.1 Plan Purpose

The purpose of the *Troup County Long-Range Transportation Plan* is to identify potential projects based on existing and forecasted future opportunities for the transportation network through the year 2050. The plan will serve as the Long-Range Transportation Plan (LRTP) for the county, including the cities of Hogansville, LaGrange, and West Point. Freight is an important element of the plan, and freight travel patterns were evaluated, including effects on downtown LaGrange, and identified projects reflect the anticipated growth in population and employment within the county, particularly as it relates to freight-related land use, such as manufacturing and distribution.

## 1.2 Study Area Description

The study area, shown in **Figure 1-1**, includes all of Troup County, which covers approximately 414 square miles in west central Georgia. The county includes three incorporated municipalities: the City of LaGrange, City of West Point, and City of Hogansville, all of which are located along I-85. The county is southwest of Atlanta, north of Columbus, and shares its western border with Alabama. It was established in 1826 after the United States acquired the land from the Creek Nation. West Point Lake extends through much of the western and northwest part of the county.

Figure 1-1: Study Area Map

### 1.3 Planning Process

There are several steps to the planning process, as outlined in the process diagram in **Figure 1-2**. Stakeholder coordination among GDOT, Troup County, the cities, and other stakeholders occurred throughout the process and is described in more detail in **Chapter 2 Agency Involvement**. The planning process began with an assessment of exiting transportation conditions, such as analyses of safety, roadway operations, freight patterns, transit, bicycle, and pedestrian facilities. Next, the plans' goals and objectives were identified, and future conditions of the transportation system were forecasted. A list of draft projects was prepared, and projects went through environmental screening and project evaluation. Planning-level cost estimates were identified for each project, and the project list was finalized with input from the stakeholders. Upon completion of the plan, the next steps are to continue coordination among stakeholders and with local, regional, and statewide plans and implement projects.

#### Chapter 1 – Introduction

Figure 1-2: Planning Process Overview

\* Project implementation is subject to funding availability.

# 2 Agency Involvement

Agency involvement occurred throughout the planning process to gain valuable insight into the local perspectives within the county. The plan was led by the Project Management Team (PMT), comprised of participants from GDOT, Troup County, the City of LaGrange, and the consulting team. Additionally, a larger stakeholder Advisory Committee (AC) was established to provide guidance and feedback at key milestones throughout the process. Other meetings were held to coordinate with key stakeholders and ongoing initiatives.

# 2.1 Project Management Team and Advisory Committee

The PMT group met frequently throughout the planning process to guide the development of the plan. The group discussed plan progress and upcoming milestones. This group reviewed all draft projects and materials prior to distribution to the AC.

In addition to the PMT, stakeholder agencies were involved in the planning process through participation in the AC. The AC included representatives from the following agencies:

- 1. GDOT Office of Planning and District Three
- 2. Troup County
- 3. City of LaGrange
- 4. City of Hogansville
- 5. City of West Point
- 6. Three Rivers Regional Commission
- 7. Downtown LaGrange Development Authority
- 8. West Point Development Authority
- 9. Hogansville Downtown Development Authority
- 10. LaGrange-Troup County Chamber of Commerce
- 11. Troup Transit
- 12. Kia Motors Manufacturing
- 13. Troup County School System
- 14. Georgia Ports Authority
- 15. Troup Strategy Center

# 2.2 Advisory Committee Meetings

There were three AC meetings during the planning process, as described below. The dates and locations are shown in **Table 2-1**.

|                     | <b>•</b> ••• |         | ~       |        |
|---------------------|--------------|---------|---------|--------|
| Table 2-1: Advisory | / Committee  | Meeting | Summary | l able |

| Meeting                                      | Date              | Location   |
|--|-------------------|--|
| Stakeholder Advisory Committee<br>Meeting #1 | April 17, 2023    | Troup County Agricultural<br>Education Center, 2168 Pegasus<br>Parkway, LaGrange |
| Stakeholder Advisory Committee<br>Meeting #2 | September 8, 2023 | Troup County Fire Administration<br>Building, 2495 Hamilton Road,<br>LaGrange    |
| Stakeholder Advisory Committee<br>Meeting #3 | January 19, 2024  | Troup County Fire Administration<br>Building, 2495 Hamilton Road,<br>LaGrange    |

#### 2.2.1 Advisory Committee Meeting #1

The first AC meeting was held on April 17, 2023, and served as an introduction to the planning process (**Figure 2-1**). The presentation to stakeholders focused on explaining the purpose of the plan, providing an overview of existing demographic and transportation conditions, and seeking feedback from the stakeholders regarding draft plan goals and objectives. A live polling tool was used, in which attendees provided feedback on locations of traffic congestion, relevance of each of six draft goals, suggestions for revisions to the draft goals, relevance of draft objectives, feedback on the draft objectives, and what works well versus what could be improved in terms of transportation in Troup County. The poll results revealed that most of the draft goals and objectives were still relevant, although the goal of "Accommodating mobility without the use of automobiles" was less relevant than the rest (**Figure 2-2**). Similarly, most draft objectives were still relevant, scoring at least 3 on a scale of 1-5, except for "Provide for non-vehicular modes, such as biking, walking, and transit," which scored 2.8 out of 5.

Figure 2-1: Advisory Committee Meeting #1

Figure 2-2: Live Polling Responses to Draft Goals during Advisory Committee Meeting #1

Figure 2-3: Live Polling Responses to Draft Objectives during Advisory Committee Meeting #1

### 2.2.2 Advisory Committee Meeting #2

During the second Advisory Committee meeting, held on September 8, 2023, the presentation included the updated goals and objectives (based on feedback from the first AC meeting), a summary of the environmental screening process, the modeled future traffic conditions, and a summary of how the draft projects were developed. The presentation was followed by a workshop session, during which participants provided feedback about the draft projects shown on the maps provided. Ultimately, that feedback was then used to refine and finalize the project list. **Figure 2-4** depicts the workshop session during the second AC meeting.

Figure 2-4: Workshop Session during Advisory Committee Meeting #2

#### 2.2.3 Advisory Committee Meeting #3

At the third, and final, meeting on January 19, 2024, the maps and list of identified projects were presented. The meeting included a presentation summarizing the planning process, final list of projects, and next steps. **Figure 2-5** depicts the presentation portion of the meeting. Following the presentation, stakeholders viewed the projects shown on display boards in an open house format.

Figure 2-5: Presentation during Advisory Committee Meeting #3

# 2.3 Other Coordination Meetings

Additional outreach occurred to coordinate with ongoing studies and key stakeholders:

- **Georgia Freight Plan** This plan concluded in March 2023, during the *Troup County Long-Range Transportation Plan*. Analysis and findings from the freight plan, such as top counties for origin and destination of manufacturing tonnage, freight-intensive land uses, the importance of US 27 as an alternate route to I-85 between Tennessee and Florida, and truck parking locations were incorporated into this plan.
- LaGrange Bypass Scoping Study This study (PI 0016838) occurred concurrently with the *Troup County* Long-Range Transportation Plan and evaluated the possibility of a truck-only facility. The scoping study team provided frequent updates throughout the planning process. Ultimately, the scoping study did not determine a need for a truck-only facility due to low truck volumes and the public's desire for a solution applicable to all traffic types. Therefore, that was not included in this plan's final project list.
- **Georgia Ports Authority** The PMT met with the Georgia Ports Authority on May 22, 2023, to gain understanding of the timing and scale of the forthcoming West Central Inland Port. Based on the location and assumptions about freight tonnage and jobs associated with the facility, the travel demand model was updated to account for trips to and from the port. This provided for a more accurate and useful future model, as the port is likely to affect travel demand and volumes.
- Kia Motors Manufacturing The PMT met with a representative from Kia on July 11, 2023. During the meeting, topics of discussion included access to and from the Kia manufacturing facility in West Point, employee and freight access issues, and potential future needs and solutions. The potential opportunities are incorporated in Chapter 7 Future Conditions and Potential Improvements.
- **GDOT Offices** Identified projects were reviewed during meetings and email coordination with GDOT's Offices of Utilities, Bridge Design & Maintenance, and Traffic Operations. Ongoing coordination occurred between GDOT Planning and District Three throughout the process via the PMT.
- **Cities** Toward the end of the planning process, one-on-one meetings were held with the mayors of West Point (November 13, 2023) and Hogansville (November 14, 2023). The purpose of the meetings was to

review and ensure support for the identified projects. The City of LaGrange was involved throughout the process as a member of the PMT.

## 2.4 Goals and Objectives

The *Troup County Long-Range Transportation Plan* goals and objectives align with statewide goals from Governor Brian Kemp and GDOT and were further refined to reflect what the plan plans aim to achieve. The plan goals and objectives were developed based on input from the PMT and AC stakeholders. The previous (2006) plan's goals were presented and refined based on feedback received during the first AC meeting. The updated goals and objectives are shown in **Figure 2-6**.

Figure 2-6: Goals & Objectives

The goals and objectives, and the plan itself, also align with Georgia's Statewide Strategic Transportation Plan (SSTP) Framework, shown in **Figure 2-7**. The plan has a freight focus and is located in an emerging metro/rural part of the state. It advances the SSTP through more detailed investments described in the plan, and identification of projects that align with the SSTP investment strategies (foundational, catalytic, and innovation investments).

Lastly, the planning process included partnerships with stakeholders, including Troup County, the cities, and businesses.

Figure 2-7: Georgia Statewide Strategic Transportation Plan Framework (2021)

# **3 Demographic Information**

The demographic analysis includes population, income, employment, and social equity. Troup County is home to several industrial developments, including the forthcoming West Central Inland Port. As the County continues to grow, the characteristics of the residents and workers provide an understanding of the current communities and help inform future transportation investment opportunities.

The demographic data were obtained from the most recent available U.S. Census Bureau's 2020 American Community Survey (ACS), the 2019 Longitudinal Employer-Household Dynamics (LEHD), and the Georgia Statewide Travel Demand Model (GSTDM) (2015/2050 GSTDM Dataset, with updated socioeconomic data based on input from the county and cities related to upcoming developments). The county had a population of 69,400 based upon 2020 ACS 5-Year Estimates. In 2020, Troup County's population was 0.7% of Georgia's total population. There were 30,400 employed residents and a total of 38,300 jobs in Troup County, which is 0.9% of all jobs in the state. The 2020 median household income was \$46,800, nearly 25% less than the median household income for the state, \$61,200. Further demographics are summarized in **Figure 3-1**.

Figure 3-1: Existing Demographics

Data Source: American Community Survey (ACS), 5-Year Estimates (2016-2020); Longitudinal Employer-Household Dynamics (LEHD), 2019

# 3.1 Population

Past and projected future population growth patterns, presented in the following sections, are essential in understanding and planning for the future transportation system and for developing the socioeconomic inputs for the travel demand model.

### 3.1.1 Existing Population

The City of LaGrange has the highest population density with some areas having up to 5,000 people per square mile. Otherwise, the county is primarily rural, with less than 500 people per square mile in areas outside LaGrange, visualized in **Figure 3-2.** Population data was obtained from GDOT's Statewide Travel Demand Model (GSTDM).

Figure 3-2: Population Density

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021

### 3.1.2 Historic Population Growth

Historically, Troup County experienced moderate population growth, with an average increase of 9% each decade since 1980, as shown in **Figure 3-3**. Troup County's total population growth between 1980 to 2020 was 19,400 new residents, an increase of 39% over the 40-year period. For comparison, the population of Georgia increased by 96% over the same period.

#### WWW.arcadis.com Troup County Long-Range Transportation Plan

Figure 3-3: Troup County Historic Population Growth

Data Source: U.S. Census Bureau, 1980-2020

### 3.1.3 Future Population Projection

The future population and employment forecasts presented here are consistent with those used in the GSTDM, which is used to model the future transportation system for this plan.

Troup County's population is projected to increase about .78% per year through 2050, as shown in **Figure 3-4**. Overall, from 2020 to 2050 the population is projected to increase 25%. This rate of population growth is similar to past population growth, as the county saw about 25% population growth over the 30-year period from 1990 to 2020.

Figure 3-4: Troup County Future Population Growth

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021 and stakeholder input.

**Figure 3-5** shows the forecasted population density for Troup County in 2050. The highest population density areas are located around the eastern and southwestern sides of LaGrange and Hogansville. The population is set to grow the most in the cities, particularly in and around LaGrange. Most rural areas are not expected to experience significant population growth. **Figure 3-6** shows the forecasted change in population from 2020 to 2050 with highest growth expected in the cities and along I-85.

Figure 3-5: Future Population

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021 and stakeholder input.

Figure 3-6: Forecasted Population Growth (2020-2050)

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021 and stakeholder input.

# 3.2 Employment

It is essential to understand the employment dynamics within Troup County in the development of a transportation plan. The types of jobs available, the locations people work, and future employment trends play a fundamental role in shaping the transportation network within the county.

### 3.2.1 Existing Employment

As of 2020, employment is most concentrated in the cities – LaGrange in the center of the county, and West Point in the southwest, as shown in **Figure 3-7**. According to the GSTDM (2020) there are approximately 36,000 jobs in the county. Major employers include Interface Flooring Systems, Milliken, Walmart, WellStar Health System, and the Hyundai and Kia Assembly plants.

Figure 3-7: Employment Density

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021.

Based on 2020 Longitudinal Employer-Household Dynamics (LEHD) data from the U.S. Census, the majority (57%) of workers employed in Troup County reside outside of the county. Forty-three percent (43%) of people who work in Troup County also live in the county, and 47% of employed residents of Troup County work outside the county, as shown in **Figure 3-8**.

### Inflow/Outflow Job Counts in 2020

Figure 3-8: Troup County Job Flow

Data Source: LEHD, 2020

The county's top five employment sectors, comprising of nearly 70% of the county's total employment, are outlined in **Figure 3-9**.

### **Employment Sectors**

Data Source: North American Industry Classification System (NAICS) Industry Sector, 2020.

### 3.2.2 Future Employment Projection

Employment is expected to continue to grow, largely associated with the automotive and other manufacturing activities in the area. Between 2020 and 2050, Troup County is forecast to gain approximately 28,600 jobs, according to the GSTDM, shown in **Figure 3-10**.

### Projected Employment Growth (2020-2050)

**Figure 3-11** shows the projected employment density in Troup County in the year 2050. The areas with the highest employment density are in LaGrange and West Point, especially near the existing Kia manufacturing plant. There is also predicted to be increased employment growth southwest of LaGrange due to the establishment of several manufacturing and logistics facilities in the area. The projected growth accounts for anticipated growth at Kia and other major existing and planned employment areas, including the planned inland port facility, which is expected to spur additional job growth in the area.

Figure 3-10: Employment Growth (Number of Jobs) (2020-2050)

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021 and stakeholder input.

Figure 3-11: Projected Employment Density (2050)

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021 and stakeholder input.

In terms of employment growth, the areas forecast to grow the most are in LaGrange, particularly between West Lukken Industrial Dr and Pegasus Parkway and along SR 109, as well as near the Kia plant in West Point.

Figure 3-12: Forecasted Employment Growth (2020-2050)

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021 and stakeholder input

### 3.3 Future Socioeconomic Growth Projections

The future socioeconomic (SE) growth projections are based on the 2050 GSTDM data that has been developed with input from both GDOT and individual stakeholders of this plan. In addition to the previously programmed growth in the model, the SE data have incorporated planned growth from Developments of Regional Impact (DRIs) and entitled projects identified by Troup County stakeholders. A full list of the DRIs is listed in **Section 4.2 Developments of Regional Impact**. Past and projected future population and employment growth are shown in **Figure 3-13**. The average annual growth rate for population is 0.78%, and the average annual employment growth is 1.69%. By 2050, Troup County population is expected to reach 86,700 and employment will reach 64,600, according to projected growth.

## **Past and Projected Population & Employment Growth**

Figure 3-13: Past & Projected Population & Employment

Data Source: Data Source: U.S Census Bureau 2000-2020, U.S. Bureau of Labor Statistics; Future Years GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), based on Georgia Office of Planning and Budget, 2021 and stakeholder input.

# 3.4 Social Equity

Troup County includes diverse demographics and socioeconomic conditions. The following section evaluates environmental justice factors, incorporating federal government or agency initiatives and metrics to identify communities with potential environmental justice concerns. The following tools were used:

- Federal Justice40 Initiative
- Environmental Protection Agency's Environmental Justice Screen (EPA EJScreen)
- Centers for Disease Control and Prevention's Social Vulnerability Index (CDC SVI)

### 3.4.1 Justice40

The Justice40 Initiative, authorized under Executive Order 14008 and signed on January 27, 2021, aims to deliver 40% of all benefits of federal investments in sustainable transportation to disadvantaged communities.<sup>5</sup> Following

the Executive Order, the U.S. Department of Transportation (USDOT) developed the Equitable Transportation Community (ETC) Explorer. The ETC Explorers uses 2020 Census tract data to explore the cumulative burdens communities experience, as a result of underinvestment in transportation, in the following five components:

- Transportation Insecurity
- Climate and Disaster Risk Burden
- Environmental Burden
- Health Vulnerability
- Social Vulnerability

Forty indicators were used to develop the five components, and the tool provides the ability to understand a tract's disadvantage for each component, and as a whole. Tracts that score over the 65<sup>th</sup> percentile for each component are considered disadvantaged in that component. Percentiles are a way to compare the Census tract to all other tracts in the state. For example, if a tract is in the 76<sup>th</sup> state percentile for the environmental component, this means that the residents of the tract experience greater environmental burdens than 76% of all of tracts in the state. Disadvantaged Census tracts in Troup County are shown in **Figure 3-14**. As the map shows, 11 of the 18 Census tracts in the county are considered overall disadvantaged. These tracts comprise 61% of the county.

Of these 11 tracts, six were above the 80<sup>th</sup> percentile for transportation insecurity. Transportation insecurity occurs when people are unable to get where they need to go in order to meet the needs of their daily life regularly, reliably, and safely. A growing body of research indicates that transportation insecurity is a significant factor in persistent poverty.<sup>6</sup> Three elements factor into the transportation insecurity component: transportation access, transportation cost burden, and transportation safety. Residents in these tracts experience longer commute times, difficulty traveling to where they want to go, spend a large percentage of household income on transportation, and experience higher levels of traffic fatalities. As a result, these factors may influence transportation decision-making. For example, households with greater transportation cost burden may limit trip-making to essential needs. Furthermore, lower-income households rely on other means of travel than private automobiles, at a higher rate.<sup>7</sup>

The Justice40 disadvantaged areas, under federal initiative, are prioritized for federal spending, including discretionary grants. As such, projects identified in these areas offer additional grant opportunities or flexible match requirements. To implement the Justice40 initiative the USDOT has specified covered funding programs that align with similar goals and will emphasize impact to historically disadvantaged communities. Some example programs are the Carbon Reduction Program (CRP), Rebuilding American Infrastructure with Sustainability and Equity (RAISE), Safe Streets 4 All (SS4A), Strengthening Mobility and Revolutionizing Transportation Grants Program (SMART). RAISE discretionary program is one example where the federal government could provide 100% funding for projects identified in historically disadvantaged communities.<sup>8</sup>

Data Source: USDOT Equitable Transportation Community Explorer, 2023

### 3.4.2 EJScreen

The EPA's environmental justice mapping and screening tool, EJScreen, identifies areas with EJ populations, which include people of color, people with low incomes, populations exposed to potential environmental quality issues, and other environmental and demographic indicators that may indicate environmental and health risks. There are twelve EJ indicators, which combine the demographic indicators with an environmental factor.<sup>9</sup>

Key findings of the study area's EJScreen report are shown in **Figure 3-15**. EJScreen compares a community (Troup County) to the rest of the state and nation using percentiles. The percentile indicates what percentage of the state of Georgia or U.S. population has an equal or lower value, meaning less potential for risk or exposure, compared to Troup County. Relative to the state of Georgia, the county is above the 60th percentile for most EJ indices, indicating that the county's population has a higher susceptibility to these risks than 60% of all Georgians. The lowest performing indices, or highest percentiles are found in Air Toxics. Troup County has an Air Toxics Respiratory Hazard Index that is higher than 67% of the state of Georgia and higher than 80% of the U.S., indicating a greater risk for adverse health effects.

<sup>&</sup>lt;sup>9</sup> US Environmental Protection Agency, EJScreen: Environmental Justice Screening and Mapping Tool, <u>https://www.epa.gov/ejscreen/what-ejscreen</u>

www.arcadis.com

#### Figure 3-15: EJScreen Indexes

Data Source: EPA EJScreen, 2022

In addition to environmental quality indicators, EJScreen uses low-income as a socioeconomic indicator that factors into susceptibility to environmental pollution. The percentage of each Troup County Census tract that is low income, defined as having an income below the federal poverty threshold, is shown in **Figure 3-16**. The areas with relatively higher percentages of low-income population are primarily in the central LaGrange area near Downtown.

Figure 3-16: Low-Income Population

Data Source: American Community Survey (ACS) 5-Year Estimates (2016-2020)

### 3.4.3 Social Vulnerability Index

The Center for Disease Control and Prevention (CDC) and the Agency for Toxic Substances and Disease Registry (ATSDR) provides databases to help planners and public officials to identify and map communities that will most likely need support before, during, and after a hazardous event. This dataset includes the Social Vulnerability Index (SVI),<sup>10</sup> which identifies populations who are especially at risk in public health emergencies. These populations are identified based on factors like socioeconomic status, household composition, minority status, transportation, and others shown in **Figure 3-17**. The areas with higher SVI values correspond with the Justice40 disadvantaged communities, EJ areas, and low-income areas.

<sup>&</sup>lt;sup>10</sup> Centers for Disease Control and Prevention, CDC/ATSDR Social Vulnerability Index (SVI), <u>https://www.atsdr.cdc.gov/placeandhealth/svi/at-a-glance\_svi.html</u>

Figure 3-17: Social Vulnerability Index

Data Source: CDC/ASTDR, 2020

# 4 Land Use and Development

Land use is critical in understanding the transportation improvements needed to support future growth and development. The county and city comprehensive plans were reviewed to assess land use and development patterns. Additionally, major planned and potential development sites were identified that could have substantial effects on the transportation system. As previously mentioned, the anticipated population and employment associated with planned development were incorporated into the travel demand model to more accurately reflect future travel patterns and volumes.

### 4.1 Land Use & Character Areas

Unincorporated Troup County, City of LaGrange, City of Hogansville, and City of West Point identify Character Areas in their respective comprehensive plans. Character Areas are specific geographic areas within a community that have distinct characteristics, have the potential to evolve into a unique area when provided specific and intentional guidance, or require special attention due to unique development issues.<sup>11</sup> Recommended land uses are defined for each Character Area. **Figure 4-1**, **Figure 4-2**, **Figure 4-3**, and **Figure 4-4** show the Character Areas for unincorporated Troup County, Hogansville, LaGrange, and West Point.

Unincorporated Troup County consists of Agricultural and Agricultural Residential, with Suburban and Urban Character Areas surrounding the cities. There are some areas of Commercial and Industrial along major corridors near LaGrange. Surrounding West Point Lake is Conservation and Lakeside Residential.

<sup>&</sup>lt;sup>11</sup> Georgia Department of Community Affairs, Discovering and Planning Your Community Character: A Guidebook for Citizens and Local Planners, <u>https://www.dca.ga.gov/sites/default/files/characterareaguide.pdf</u> www.arcadis.com Troup County Long-Range Transportation Plan

Figure 4-1: Unincorporated Troup County Character Areas

Image Source: Troup County CTP, 2021

In the City of Hogansville, the character areas include Downtown, Commercial (along US 29/Hogansville Rd), West End, Industrial (along the east side of US 29/Hogansville Rd), Residential, Village, Public Lands, Lake Jimmy Jackson, and Interstate.

Image Source: Hogansville Comprehensive Plan Update, 2021

Character areas in LaGrange's city core and major corridors include Downtown, Activity Center, Commercial Development, Commercial Redevelopment, Traditional Neighborhood Stable, and Traditional Neighborhood Redevelopment. The surrounding areas include Developing Neighborhood, Parks, and Industrial.

Figure 4-3: LaGrange Character Areas

Image Source: LaGrange Comprehensive Plan, 2021

#### Chapter 4 - Land Use and Development

In West Point, the downtown core includes Historic Downtown, Redevelopment Corridor, Traditional Residential, and Recreation/Green Space, surrounded by Established Residential. Along the interstate is a large swath of Industrial, which is where the Kia Motors Manufacturing is located, as well as Developing Commercial. As employment opportunities, institutions such as Point University, and overall activity within West Point continue to increase, so will the demand for additional retail and hotel capacity. Adjacent to Industrial and Developing Commercial areas are Developing Residential, intended to provide housing to support the growth of the county.

Figure 4-4: West Point Character Areas

Image Source: West Point Comprehensive Pla Update, 2020

# 4.2 Developments of Regional Impact

There were 14 Developments of Regional Impact (DRIs) in Troup County submitted from 2017 to 2023, as shown in **Figure 4-5** and **Table 4-1**. Most developments are mixed-use or industrial projects. One development is currently under construction, Creekview Vista, a mixed-use development consisting of multifamily apartments, townhomes, and retail.<sup>12</sup> Across all 14 DRIs, over 4,000,000 square feet of retail and 6,200 units of housing would be developed.<sup>13</sup> These sites were accounted for in the future growth projections for the travel demand model used in this plan to forecast future traffic conditions. Submittal of a DRI application does not guarantee that the proposed development will be built, but knowing where major developments are proposed is still useful in the planning process.

## 4.3 Entitled Developments

As the largest city in the County, developments in LaGrange have the potential to impact travel patterns throughout Troup County. There were over 40 entitled projects in LaGrange as of April 2023, as shown in **Figure 4-6**. Entitled projects have obtained all the jurisdictional legal approvals for their development plans. In total, these entitled projects will create 2,500 units of multi-family housing, 1,100 townhomes, 900 single-family homes, and 30 commercial units.

Figure 4-6: Entitled Projects in LaGrange

Image Source: City of LaGrange, 2023

# 4.4 GRAD Sites

Georgia lists industrial certified sites that are ready for fast-track construction projects in the Georgia Ready for Accelerated Development (GRAD) Program. These sites have met the program's due diligence standards, which include Phase I environmental assessment, preliminary geotechnical investigation, cultural and endangered species investigation, zoning designation, utility service assessment, and wetlands and stream delineation.<sup>14</sup> As of October 2023, there were no GRAD sites within Troup County.

## 4.5 Georgia SiteSelector Certified Sites

As of October 2023, there were 16 certified sites in Troup County on the Georgia SiteSelector map, as shown in **Figure 4-7** and **Table 4-2**.<sup>15</sup> These are locations that are available for development. Most are located around LaGrange, and there are also sites along I-85 in West Point and Hogansville.

# 5 Review of Existing Studies, Plans, and Documents

In the creation of this *Troup County Long-Range Transportation Plan*, various statewide, countywide, and city-level plans were reviewed to explore past recommendations for Troup County's transportation future.

This section notes key highlights from the following plans:

- Statewide Plans
  - o GDOT 2021 Statewide Strategic Transportation Plan: 2050 Statewide Transportation Plan
  - Statewide Transportation Improvement Program (STIP FY 2024-2027)
  - o GDOT Statewide Transit Plan (2022)
  - o GDOT Georgia 2050 Rural and Human Services Transportation Plan (2023)
  - GDOT Bicycle Safety Action Plan (2018)
  - o GDOT Pedestrian Safety Action Plan (2018-2022)
  - GDOT Georgia Freight Plan (2023)
  - GDOT Statewide Air Cargo Study (2022)
- Countywide Plans
  - Troup County Multi-Modal Transportation Study (2006)
  - Troup County Comprehensive Plan (2021-2041)
- Citywide Plans
  - City of Hogansville Comprehensive Plan Update (2021)
  - City of LaGrange Comprehensive Plan (2021-2041)
  - City of West Point Comprehensive Plan Update (2021-2040)
  - LaGrange Gateway Corridors Plan (2016)

# 5.1 Statewide Plans

### 5.1.1 GDOT 2021 Statewide Strategic Transportation Plan: 2050 Statewide Transportation Plan

The 2021 Statewide Strategic Transportation Plan: 2050 Statewide Transportation Plan<sup>16</sup> combines GDOT's investment strategies with its long-range comprehensive transportation plan. Highlights from this plan include emphasis on performance-based planning approaches, investment in support of economic development opportunities, and focus on freight operations improvement and rural development. Initiatives to collaborate with other agencies and public-private partnership are discussed, as are ways to incorporate new federal planning requirements.

The plan includes three investments categories:

- 1. Statewide freight and logistics
- 2. People mobility in metro Atlanta
- 3. People mobility in emerging metros and rural Georgia

The plan included the following investment strategies:

1. Foundational investments - taking care of our existing transportation system

<sup>16</sup> Georgia Department of Transportation, 2021. <u>https://www.dot.ga.gov/InvestSmart/SSTP/GDOT\_FINAL\_2021SSTP.pdf</u> <u>www.arcadis.com</u> Troup County Long-Range Transportation Plan

- 2. Catalytic investments growing Georgia's economy
- 3. Innovation investment preparing for transportation demands of the future.

The investment categories that are applicable to the Troup County Transportation Plan are Statewide Freight and Logistics and People Mobility in Emerging Metros and Rural Georgia. Examples of specific strategies under the Foundational, Catalytic, Innovation strategy framework are shown in **Table 5-1**.

| Investment Strategy  | Statewide Freight and Logistics   | People Mobility in Emerging Metros and Rural Georgia  |  |
|--|---|---|--|
| Foundational Investments<br>Taking care of our<br>existing transportation<br>system        | <ul> <li>» Commercial motor vehicle and rail<br/>safety</li> <li>» Asset management for key freight<br/>corridors including truck routes and<br/>GDOT-owned rail corridors</li> <li>» New Freight Operations Lump Sum</li> </ul>  | <ul> <li>» Highway and rail safety</li> <li>» Asset management, especially<br/>bridges in freight-intensive areas</li> <li>» ITS and regional traffic operations<br/>and incident management</li> <li>» New Rural Development Lump Sun<br/>Program</li> </ul> |  |
|  | Program   | » Emergency response, including evacuation routing  |  |
| <u>Catalytic Investments</u><br>Strategic expansion to<br>support economic<br>development  | <ul> <li>» Major Mobility Investment Program,<br/>including truck only lanes in Central<br/>Georgia and Savannah area<br/>connections</li> <li>» Options to address freight bottlenecks</li> <li>» Intermodal connections based on<br/>freight demand</li> <li>» Connectivity to Georgia Ready for<br/>Accelerated Development (GRAD) sites<br/>and other industrial and agricultural<br/>sites</li> <li>» Rail capacity projects on GDOT-<br/>owned corridors</li> </ul> | <ul> <li>» Strategic capital investments in rural corridors</li> <li>» Strategic capacity investments in emerging metro areas</li> <li>» Enhanced connectivity to GRAD sites and other industrial and agricultural sites</li> </ul>                           |  |
| Innovation Investments<br>Positioning Georgia's<br>transportation system for<br>the future | <ul> <li>» Real-time information sharing</li> <li>» Freight vehicle technologies</li> <li>» Freight corridor technologies</li> <li>» Supply chain management systems</li> </ul>   | <ul> <li>» Rural broadband infrastructure for<br/>transportation technologies</li> <li>» Preparing for connected and<br/>automated vehicles</li> <li>» Integrated corridor management, to<br/>maximize use of existing rights-of-way</li> </ul>               |  |

### Table 5-1: SSTP Investment Strategies

Governor Brian Kemp's vision is the driving factor for the plan's goal areas. The Governor has outlined four strategic goals, and GDOT has identified the following supporting priorities:

- 1. Make Georgia # 1 for small business
  - a. Expand Georgia's role as a world-renowned hub for global commerce
  - b. Develop a skilled workforce to meet current and future opportunities across the industry spectrum
  - c. Ensure taxpayers can easily navigate and find necessary information through government interfaces
- 2. Reform State Government
  - a. Maximize taxpayer value with conservative budgeting
  - b. Expand public-private partnerships and leverage technology to best utilize limited State resources
- 3. Strengthen rural Georgia
  - a. Increase rural broadband access for economic growth
  - b. Deploy regional strike teams to areas with economic challenges or lessening populations to collaborate with local leaders and seek opportunities for growth
- 4. Put Georgians first
  - a. Improve transportation safety and security

# 5.1.2 Statewide Transportation Improvement Program (STIP FY 2024-2027)

The *Statewide Transportation Improvement Program* outlines federally funded and fiscally constrained transportation investment projects that support Georgia's strategic transportation goals and policies. The STIP provides details on project schedules and projected phases of work that are subject to change. The STIP represents the first four years of the 2050 long-range SSTP. This document addresses compliance with federal law, transportation performance management, public involvement, funding sources and types, freight development, innovative technology and initiatives, and impact on air quality. Strategies for implementation and details on how these topics will be addressed in the proposed investment projects are discussed. The STIP provides a summary of project costs for Troup County, which excludes lump sum projects, and totals over \$2.2 million. The FY 2024-2027 STIP lists four projects in Troup County, as shown in **Table 5-2.**<sup>17</sup>

| PI Number | Year | Work Type  | Project Description                                      | Total Project Cost |
|-----------|------|------------|--|--------------------|
| T007354   | 2024 | Intermodal | FY 2024-TROUP COUNTY-SEC.5311-<br>CAPITAL AND OPERATIONS | \$518,750          |
| T008256   | 2025 | Intermodal | FY 2025-TROUP COUNTY-SEC.5311-<br>CAPITAL AND OPERATIONS | \$564,008          |
| T008258   | 2026 | Intermodal | FY 2026-TROUP COUNTY-SEC.5311-<br>CAPITAL AND OPERATIONS | \$564,008          |
| T008259   | 2027 | Intermodal | FY 2027-TROUP COUNTY-SEC.5311-<br>CAPITAL AND OPERATIONS | \$564,008          |

### Table 5-2: FY 2021-2024 STIP Projects

### 5.1.3 GDOT Statewide Transit Plan (2022)

The *Statewide Transit Plan*<sup>18</sup> (SWTRP) assigns context to the current state of transit in Georgia, and outlines plans for the future of transit on the 2050 horizon. Considering GDOT's goal of following a multimodal approach to transportation, connectivity and accessibility are at the forefront of developing the goals and objectives of the 2022 SWTRP.

The plan identifies five goals aligned with Governor Kemp's Strategic Goals and GDOT Focus Areas:

- 1. Provide a safe and sustainable public transit network
- 2. Optimize public transit programs to best meet public transit systems and travelers' needs
- 3. Ensure public transit coverage across the state to support mobility and access for all
- 4. Connect rural transit to regional and urban centers
- 5. Leverage technology and innovation to support public transit ridership and performance

Based on these five goals and corresponding objectives, 20 performance measures were developed to assess the progress towards reaching these goals. The plan discusses the counties that are served by transit, which make up 13 counties in the Atlanta region and fall within the Georgia Regional Transit Authority (GRTA) boundary. Troup County lies just outside of this region, as it is served through rural transit. There are no multimodal transit centers in Troup County, but there are intercity bus stations. Like many rural counties, Troup does not have a Transit Development Plan (TDP), and in order to remedy this, the SWTRP Needs Assessment Report outlined near-term strategies for developing TDPs in counties that do not have one. The first step proposed is creating a guidebook for TDP development to show agencies and communities what standards, considerations, and components they should follow, as well as best practices. Additionally, considering the development of regional TDPs instead of single-county TDPs could be useful for many of these rural counties. A progress check was conducted on this near-term strategy, and in November 2021, GDOT published a TDP guidebook for regional agencies to begin developing regionally focused TDPs that still account for local transportation issues on a county level.<sup>19</sup>

### 5.1.4 Georgia 2050 Rural and Human Services Transportation Plan (2023)

GDOT, in partnership with the Department of Human Services (DHS) and the Department of Community Health (DCH), developed the *Georgia 2050 Rural and Human Services Transportation*<sup>20</sup> (RHST) Plan. RHST provides mobility services for the benefit of persons with disabilities, older adults, and persons without a vehicle. RHST includes services provided by public transit operators, human service agencies, private transportation providers, and private nonprofit agencies.

The RHST plan outlines recommendations to guide and advance the coordination of RHST throughout the state. Six goals were developed for the plan for improving the coordination and optimizing of Georgia's RHST System:

- 1. Provide coordinated and efficient rural and human services transportation
- 2. Provide a safe and sustainable RHST network
- 3. Optimize RHST programs to best meet RHST systems' and travelers' needs
- 4. Ensure RHST coverage across the state to support mobility and access for RHST users

<sup>&</sup>lt;sup>18</sup> Georgia Department of Transportation, 2022. *Statewide Transit Plan.* 

https://www.dot.ga.gov/InvestSmart/Transit/Documents/TransitPlan/SWTRP%202022%20Implementation%20Report.pdf

<sup>&</sup>lt;sup>19</sup> Georgia Department of Transportation, 2021. *Transit Development Plan Guidebook*. <u>https://transit-development-plan-tdp-guidebook-gdot.hub.arcgis.com/</u>

<sup>&</sup>lt;sup>20</sup> State of Georgia, 2023. Georgia 2050 Rural and Human Services Transportation Plan. <u>https://rhst-gdot.hub.arcgis.com/</u>

- 5. Connect rural transportation to regional and urban centers
- 6. Leverage technology and innovation to support RHST ridership and performance

The RHST Needs Assessment provides further information on the Troup Transit system. Troup Transit's demandresponse service provided 32,249 annual trips in 2019. Demand-response transit is available in all neighboring Georgia counties except for Harris County. The Needs Analysis determined that the highest levels of transit demand are within the northeastern and southwestern regions of the county, as shown in **Figure 5-1**.

Figure 5-1: Transit Need Areas

Source: GA 2050 RHST Plan

For the county, the Needs Assessment recommends the development of a Transit Asset Management Program (TAMP), gaining support for General Transit Feed Specification (GTFS) and National Transit Database (NTD) development, and obtaining resources for regular maintenance of transit vehicles. In addition, based on a

WWW.arcadis.com Troup County Long-Range Transportation Plan community rider survey, the highest priorities for improvements included connecting different parts of communities, cities, and providing access to jobs and healthcare. Some of the identified RHST technologies priorities included converting transit vehicles to electric or lower-emission vehicles, partnering with ride-hailing companies, and viewing real-time arrival information through a smartphone application, website, and/or text messaging service.

The plan's recommendations were developed after completing the Needs Assessment and other stakeholder and public engagement. Over 80 recommendations were developed. The five recommendations that were most aligned with the plan goals were:

- Create connections to activity centers
- Expand capacity of rural systems
- Adopt flexible service for micro transit services
- Connect rural areas with areas of high development
- Leverage intercity and long-distance transportation services

### 5.1.5 GDOT Bicycle Safety Action Plan (2018)

The *Bicycle Safety Action Plan*<sup>21</sup> provides guidance on the current state of bicycle safety in Georgia, including when and where crashes occur, how to evaluate data when making decisions, and what level of funding and investment is required to develop active solutions for bicycle safety. The plan identifies priority locations with opportunities for improvement to focus the resources and funding. The plan states the goal of zero deaths through creating safe environments for bicycling and strives to reduce bicyclist crashes and injuries.

The plan identifies four objectives and supporting strategies. The objectives are:

- Gather data that helps optimize selection of safety improvements
- Systematically and reliably incorporate proven bicyclist safety countermeasures during the design process
- Train and engage partners on strategies that will increase bicyclist safety
- Establish and allocate funding streams needed to achieve all strategies

Other statewide plans, regional plans, school and campus plans, city or countywide plans, and trails and parks plans are referenced for more information. Troup County is not among the top ten list of Georgia cities and jurisdictions with most bicycle collisions for the 2005-2015 timeframe. The plan still provides good guidance for application in the foreseeable future. On a state level, there is focus on developing strategies to count bicycles and calculate rates of collisions, as well as tracking the existing state of cycling infrastructure. From this data, safety audits and procedures can be developed to determine where safety improvement efforts and performance measures should be concentrated. The results will indicate where funding can be obtained and allocated. Prioritization of projects will direct engagement of internal and external stakeholders, whether that is through training workshops on safe street design or ensuring the public is educated on cycling safety. On a local level, the emphasis is on education of the public, especially roadway users, and strengthening the voice of advocacy organizations to strengthen the community and increase resource availability for ensuring safety.

<sup>21</sup> Georgia Department of Transportation, 2018. *Bicycle Safety Action Plan.* http://dlg.galileo.usg.edu/ggpd/docs/2018/ga/t700/\_pm1/2018/b5/elec\_p\_btext.con/1.pdf www.arcadis.com

### 5.1.6 GDOT Pedestrian Safety Action Plan (2018-2022)

The *Pedestrian Safety Action Plan*<sup>22</sup> provides guidance to GDOT, Georgia Department of Public Health, and other safety-related agencies and advocates on the current state of pedestrian safety, investment strategies for developing safety solutions, targeting locations with opportunity for improvement with resources and funding, and promoting safe environments for living healthy and active lifestyles.

The Federal Highway Administration (FHWA) and the *Georgia Strategic Highway Safety Plan* identified their vision zero goal for pedestrian fatalities in the next 20 to 30 years, after achieving an 80% reduction in pedestrian and bicycle fatalities in the next 15 years. Target guidelines were developed for what the goal and projected fatalities might be from 2018 to 2022. Eleven strategies were prioritized under five categories:

### Data

1. Collect, map, and publish data on pedestrian safety, the walking environment, pedestrian crashes, and safety risks.

### **Transportation Planning and Policy**

- 2. Incorporate pedestrian safety strategies, treatments and performance measures into state transportation plans, policies, and design guides.
- 3. Incorporate pedestrian safety strategies and performance measures into regional and local plans.

### **Transportation Infrastructure Projects**

- 4. Assess new construction and maintenance projects on state routes for opportunities to incorporate pedestrian safety elements early in the process.
- 5. Use crash data and annual road safety audits to identify roads with ongoing pedestrian issues. Collaborate with regional and local governments to prioritize selection and implementation of safety improvements on those roads.
- 6. Proactively identify and mitigate systemic pedestrian safety hazards on Georgia roads.

### Education, Enforcement, and Outreach

- 7. Create and distribute educational material to promote safety for pedestrians.
- 8. Provide annual trainings on pedestrian safety that target transportation and public health professionals, law enforcement officers, elected officials, and community advocates.
- 9. Increase outreach and education on pedestrian safety for state, regional, and local agencies and facilitate collaboration between them.

### Funding

- 10. Allocate target level of Highway Safety Improvement Program (HSIP), 402, 405h, regional, and local funds to pedestrian safety projects.
- 11. Align fund expenditures on pedestrian safety projects and programs with focus designations, data on pedestrian crash and fatality factors, and proven countermeasures.

Each strategy also identifies key tasks and action items which were accompanied by the responsible party and timeframe. The policies and programs of different jurisdictions (education, law enforcement, engineering, transportation, and land use planning) were outlined to understand what information is currently available. Funding opportunities from the 402 State Highway Safety Program (HSIP) Metropolitan Planning Organizations (MPOs) and

http://dlg.galileo.usg.edu/ggpd/docs/2018/ga/t700/\_pm1/2018/p4/elec\_p\_btext.con/1.pdf

www.arcadis.com

<sup>&</sup>lt;sup>22</sup> Georgia Department of Transportation, 2018. *Pedestrian Safety Action Plan.* 

Troup County Long-Range Transportation Plan

Regional Commissions, and local funding options were discussed. Based on the locations where most of the pedestrian crashes, injuries, or fatalities were reported from 2011-2015, the Pedestrian Safety Action Plan (PSAP) identified 12 Focus Counties. Within these 12 counties, over half of them occurred in a city. There were seven cities identified outside of the Focus Counties, and one of them being LaGrange, which had one of the highest injury rates at 85%. From 2011 to 2015, Troup County recorded 129 pedestrian-involved crashes total.

### 5.1.7 Georgia Freight Plan (2023)

The *Georgia Freight Plan*<sup>23</sup> is a BIL-compliant Freight Plan that provides a comprehensive assessment of the freight activities and ongoing activities in the state of Georgia. Policies and strategies from previous and existing documents were reviewed and integrated into this plan to determine how freight projects and investments should be prioritized. Specific goals for addressing freight-related opportunities were developed based on Governor Kemp's State Strategic goals and the goals outlined by the National Freight Highway Program. Some of these goals include:

- 1. Updating current freight infrastructure and operations and improve safety and performance
- 2. Reducing cost and time of goods delivery while increasing the resilience of supply chains
- 3. Expanding the use of existing and new data to support freight logistics
- 4. Improve connectivity and capacity within revenue streams based on return on investment (ROI) analysis
- 5. Support site development and Georgia Port Authority's inland ports
- 6. Support manufacturing, agriculture, and distribution
- 7. Environmental stewardship and maintaining equitable policies

This freight plan focuses on the major freight corridors and ports that are vital to growing and maintaining the state's economy. There are two interstates that pass through Troup County, I-85 and I-185, that serve as major corridors for freight movement. Additionally, the US-27, I-85, and I-185 running through Troup County are part of Georgia's designated freight corridors, and the latter two are a part of the Primary Highway Freight System which means they are identified as being two of the most critical highway portions in the National Highway System. For Troup County, freight is an integral part of the transportation network, and working towards the goals mentioned above will benefit the economic growth and development of the county.

# 5.1.8 Statewide Air Cargo Study (2022)

The *Statewide Air Cargo Study*<sup>24</sup> is a study developed in 2021 to identify the current state of the air cargo industry in Georgia and determine how to meet future air cargo demand. Outlined in the study are five objectives:

- 1. Providing a general understanding of the air cargo industry
- 2. Identifying current air cargo operators and scheduled air cargo services in Georgia
- 3. Determining how air cargo activity may increase
- 4. Evaluating facilities at selected airports with air cargo operators to identify needed improvements
- 5. Estimating investment to accommodate future air cargo activity

There are airports with scheduled air cargo flights as well as ad hoc or on-demand air cargo activity. In Troup County, the LaGrange-Callaway (LGC) airport manages 1 to 3 ad hoc operations per month, and at a county level, there are a number of automotive manufacturing, aerospace manufacturing, and distribution centers. The ad hoc

<sup>24</sup> Georgia Department of Transportation, 2022. Statewide Air Cargo Study.

https://www.dot.ga.gov/InvestSmart/Aviation/Documents/AirCargo/TechnicalReport\_AirCargoStudy.pdf

<sup>&</sup>lt;sup>23</sup> Georgia Department of Transportation, 2023. *Georgia Freight Plan.* <u>https://www.dot.ga.gov/GDOT/Pages/Freight.aspx</u>

www.arcadis.com

Troup County Long-Range Transportation Plan

support from the LaGrange-Callaway airport is critical to the Kia assembly plant for the transport of automobile parts and tool shipments. Additionally, LGC supports other air cargo operators, and it was included in an evaluation of airports across Georgia of the range of attributes available to serve an integrated express carrier. LGC LaGrange ranked in the medium range for its attributes to serve an integrated express carrier.<sup>24</sup>

# 5.2 Countywide Plans

### 5.2.1 Troup County Multi-Modal Transportation Study (2006)

The *Troup County Multi-Modal Transportation Study*<sup>25</sup> was initiated to develop a long-term 2035 horizon Multi-Modal Transportation Plan, in collaboration with the City of LaGrange and GDOT. The study focuses on Troup County and its three incorporated municipalities to analyze the commercial and population growth of the area, specifically along the I-85 corridor, to determine how communities are impacted by the economic conditions and growth patterns. Public engagement activities, including open house workshops and study advisory group meetings, were conducted to include the local community in the decision-making process. Demographic data, land use patterns, and existing transportation facilities were reviewed to determine what level of development is required.

The study reports key findings from their data analysis on the different modes of travel and developed goals and objectives for the future. The initial analysis of bicycle and pedestrian systems showed that sidewalks were present only in town centers and they were discontinuous. The study recommended pedestrian and bicycle infrastructure and safety projects in areas of Troup County that were lacking, such as LaGrange, West Point, and Hogansville. In terms of transit, coordination with transit operators including Georgia Regional Transportation Authority (GRTA), Metropolitan Atlanta Rapid Transit Authority (MARTA), and the Metropolitan Transit System (METRA) in Muscogee County were suggested, as well as vanpool and Park and Ride lots. Bridges that fell below a rating of 75 were recommended for improvement and prioritized. Roadway widening projects, connectivity improvements, and right of way (ROW) protection corridor projects were prioritized following the evaluation process. Intersections were selected as prioritized projects based on Average Annual Daily Traffic (AADT) and crash occurrences, especially those resulting in fatalities. Funding sources through Federal Title I Apportionments, and State Tax based funding were identified, as well as local Special Purpose Local Option Sales Tax (SPLOST) funds. The result from this study was a LRTP that was developed following the Transportation Efficiency Act for the 21st Century (TEA-21), and the Safe, Accountable, Flexible, Efficient, Transportation Equity Act (SAFETEA-LU).

### 5.2.2 Troup County Comprehensive Plan (2021-2041)

The *Troup County Comprehensive Plan*<sup>26</sup> provides goals, guidance and policy standards for the future growth and development of the county. The plan also evaluates existing conditions of the country to identify areas for improvement, opportunities, and implementation strategies. The study identified a lack of efficient east-west traffic flow and the opportunities for more public transportation or expanded Troup Transit services. Thus, the plan's goal for transportation is, "a multi-modal transportation system that provides adequate access and connectivity for all users."

Three policies and subsequent implementation strategies were developed to support this goal:

• Promote connectivity of our road network between employment, residential, and activity areas

https://www.troupcountyga.gov/Content/Documents/planning/TroupCounty-ComprehensivePlan-2021-13.pdf www.arcadis.com

<sup>&</sup>lt;sup>25</sup> Troup County, 2006. *Multi-Modal Transportation Study*.

https://dlg.galileo.usg.edu/ggpd/docs/2006/ga/t700\_pp6/m1/2006/t7/elec\_p\_btext.con/1.pdf <sup>26</sup> Troup County, 2021. *Comprehensive Plan.* 

Troup County Long-Range Transportation Plan

- Use the 2006 Multi-Modal Transportation Study Complete Streets policy to determine where pedestrian and bike accessibility is feasible and require road connectivity between activity nodes
- Protect gateway corridors from potential negative and visual impact of development
  - o Implement and update the gateway corridor plan as well as the sign ordinance
  - Support initiatives that can assist in public transportation improvements
    - Apply for grants that maintain and expand Troup Transit operations, conduct a feasibility study for fixed route transit, and determine best options for improving road connectivity to major employers

During the planning process, the Ray was identified as a unique opportunity for sustainable development and growth. As shown in **Figure 5-2**, the Ray is an 18-mile stretch of I-85 from LaGrange to West Point that serves as a living lab for innovative transportation technologies. These technologies include solar-powered vehicle charging, solar-paved highways, tire safety check stations, and environmental features such as bioswales and pollinator gardens.

Figure 5-2: The Ray

Source: https://omniair.org/news/allie-headlines-v2x-workshop/

# 5.3 Citywide Plans

#### 5.3.1 City of Hogansville Comprehensive Plan Update (2021)

The City of Hogansville Comprehensive Plan<sup>27</sup> provides policy guidance for the city's future growth and development. Transportation opportunities for improvement include increasing multi-modal accessibility, public transportation options, wayfinding, lighting, and truck parking. The Interstate Character Area, I-85 at Exit 28, serves as a major gateway to the city. Recommended development patterns for this area include enhancing appearance with appropriate signage, landscaping, and lighting, retrofitting existing strip development, and limiting curb cuts. The 2021-2026 Community Work Program developed for the plan includes the following transportation projects:

- Design, construct and install roundabouts and lights at I-85 entrances and exits •
- Construct new and improve existing sidewalks citywide
- Road repair, stormwater repairs at Pine Street
- Streetscape project for sidewalk from Collier St to former Fred's store •

#### 5.3.2 City of LaGrange Comprehensive Plan (2021-2041)

The City of LaGrange Comprehensive Plan<sup>28</sup> provides goals, guidance, and policy standards for the future growth and development of the city. Gaps in the current transportation system identified in the plan include lack of eastwest connectivity, lack of multi-modal facilities, and the need to increase transit options. The transportation goal of the Comprehensive Plan is to "maximize transportation network efficiency, options and alternatives." Several policies will support the goal, including utilizing Complete Street design, increasing bicycle and pedestrian infrastructure, promoting The Ray, and supporting The Thread through implementation of a master plan.

The Thread, shown in Figure 5-3, is identified as a major opportunity for the city. The Thread, a multi-use trail throughout the city, is an ongoing project aimed to increase the health and wellbeing of users, as well as provide a mode of transportation for those without a motorized vehicle. The Thread provides pedestrian access to multiple destinations including parks, downtown Lafayette Square, and LaGrange College, with plans to expand to West Georgia Medical Center, Great Wolf Lodge, and West Georgia Technical College Other goals of The Thread include stimulating adjacent property values and increasing the city's appeal to a younger demographic to promote employment and commercial activities.

The Comprehensive Plan identifies the following transportation projects in its 2021-2025 Community Work Program:

- North Lafayette Square Streetscape Project •
- The Thread •
- City Street Repaying Work
- Hamilton Road Widening Project
- Construct and Inland Port in the Georgia International Business Park (GIBP)
- Implement the URWays Workforce Transportation Model (ride-share service)
- Complete Entrance Road and Intersection into Callaway South Property off Pegasus Parkway

Troup County Long-Range Transportation Plan

Figure 5-3: The Thread

Source: The Thread City of LaGrange Trail System Master Plan

### 5.3.3 City of West Point Comprehensive Plan Update (2021-2040)

The *City of West Point Comprehensive Plan 2021-2040*<sup>29</sup> assesses current conditions of the city and provides guidance for future growth and development. Identified areas for improvement include pedestrian and bicycle facilities in certain areas of the city and the need for multi-modal transportation options. As such, the goal of transportation is to "enhance and create efficient transportation options that increase mobility and access including employment, goods and services, healthcare and recreation." Like the Comprehensive plans of LaGrange and Hogansville, policies to improve transportation include exploring Complete Street concepts and increasing pedestrian and bicycle connectivity. Additional policies include promoting compact mixed-use development and improving safety along railroad intersections.

Areas around the two I-85 interchanges in West Point are classified as "Developing Commercial" Character Areas. Serving as an entryway to Georgia, the areas along I-85 at SR 18 have the potential for future growth. In addition, due to the presence of the nearby Kia Motors Manufacturing facility and Point University, the city anticipates demand for additional retail and hotel capacity in this Character Area.

One transportation-related project was identified in the five-year Community Work Program, which was to establish and maintain good communications with the Ray C. Anderson Foundation or "The Ray" I-85 Corridor.

### 5.3.4 LaGrange Gateway Corridors Plan (2016)

The LaGrange Gateway Corridors plan focuses on enhancing access to the major corridors of Lafayette Parkway (SR 109), Hamilton Road (US 27) and Whitesville Road (SR 219), while strategically and sustainably planning for the city's future growth. The plan includes several detailed recommendations and renderings for the three corridors, that emphasize landscaping, pedestrian connectivity and other alternative modes, and developing a sense of character for the corridors.<sup>30</sup>

https://www.dca.ga.gov/sites/default/files/westpointcomprehensiveplanupdate2021-2040adopted.pdf <sup>30</sup> City of LaGrange, 2016. *LaGrange Gateway Corridors Plan*. http://www.lagrange-

ga.org/Content/Templates/documents/community-development/lagrange-gateway-corridors-plan-final.pdf www.arcadis.com

<sup>&</sup>lt;sup>29</sup> City of West Point, 2021. City of West Point Comprehensive Plan.

On Lafayette Parkway, recommendations from I-85 to South Davis Road include removing the dedicated turn lanes to create a five-lane road with two travel lanes in each direction and a center turn lane, and a median where feasible. A sidewalk and 12' multiuse path are also proposed, as shown in **Figure 5-4**.

Figure 5-4: Recommendations for Lafayette Parkway from I-85 to South David Road

Recommendations for Lafayette Parkway from South Davis Road to downtown include removal of the turn lane and reducing travel lane widths to control speed and create a large median, shown in **Figure 5-5**. For the downtown portion of the corridor, recommendations include the addition of street furniture that features several amenities for various users including benches, bicycle racks, and ornamental lamp posts, shown in **Figure 5-6**.

Figure 5-5: Recommendations for Lafayette Parkway from South David Road to Downtown

Figure 5-6: Recommendations for Lafayette Parkway in Downtown

Although there is a proposed GDOT project to widen Hamilton Road from two to four lanes, recommendations for the road in the Gateway Corridors Plan build upon this proposal. The recommendation retains the four travel lanes, but exchanges the center turn lane for a planted median. In addition, it proposes wider, 8-foot sidewalks outside of the public right-of-way, illustrated in **Figure 5-7**.

Figure 5-7: Recommendations for Hamiton Road from I-85 to Whitesville Road

Recommendations are similar for Whitesville Road. As illustrated in **Figure 5-8**, two travel lanes with a landscaped median and a 12-foot multiuse trail are recommended from Pegasus Parkway to Lukken Industrial Drive.

Figure 5-8: Recommendations for Whitesville Road from Pegasus Parkway to Lukken Industrial Drive

Recommendations for the portion of Whitesville Road from Lukken Industrial Drive to the bridge prior to reaching downtown include 13-foot sidewalks with decorative lighting and signage, with a long-term option to remove the center turn lane for the introduction of two dedicated bicycle lanes, shown in **Figure 5-9**.

Figure 5-9: Recommendations for Whitesville Road from Pegasus Parkway to Bridge

# 6 Assessment of Existing Transportation Facilities

The following sections describe the current conditions of the transportation system, including safety, roadway operating conditions, bridge and pavement, freight, bicycle and pedestrian infrastructure, public transportation, and aviation. Existing conditions data was collected from a variety of sources, as described in the following sections.

# 6.1 Safety and Crashes

According to GDOT's crash reporting database (Numetric), 15,418 roadway crashes were reported in Troup County between 2017-2021.<sup>31</sup> **Table 6-1** shows a summary of crash statistics for each year, broken down by crash severity, roadway users, and manner of collision. Year-over-year crash trends for the county are fairly consistent with national trends, with the annual number of crashes being relatively steady from 2018 to 2020 followed by a sharp increase from 2020 to 2021. The two most frequent crash types over the study period were Rear End (4,480) and Not a Collision With a Motor Vehicle (4,409). Such a high frequency of the latter crash type is a particular concern, as crashes involving stationary objects, buildings, or non-vehicle road users, such as bicyclists and pedestrians, are more likely to cause serious injury or death for those involved.<sup>32</sup> **Table 6-2** summarizes the number of fatalities and serious injuries on roadway crashes over the study period, broken down by roadway user. The number of fatalities and serious injuries on roadways increased each year in the study period, with a more than 100% increase from 2017 to 2021.

| Crashes in Troup County             | 2017  | 2018  | 2019  | 2020  | 2021  | Total  |  |  |
|-------------------------------------|-------|-------|-------|-------|-------|--------|--|--|
| Number of Crashes Total             | 3,132 | 2,997 | 2,967 | 2,981 | 3,341 | 15,418 |  |  |
| Number of Crashes by Severity       |       |       |       |       |       |        |  |  |
| (K) Fatal Injury                    | 16    | 13    | 8     | 12    | 19    | 68     |  |  |
| (A) Suspected Serious Injury        | 32    | 48    | 61    | 63    | 67    | 271    |  |  |
| (B) Suspected Minor/Visible Injury  | 282   | 273   | 219   | 238   | 253   | 1,265  |  |  |
| (C) Possible Injury / Complaint     | 553   | 454   | 497   | 461   | 483   | 2,448  |  |  |
| (O) No Injury /Property Damage Only | 2,234 | 2,183 | 2,153 | 2,169 | 2,466 | 11,205 |  |  |
| Unknown / Unreported                | 15    | 26    | 29    | 38    | 53    | 161    |  |  |
| Total                               | 3,132 | 2,997 | 2,967 | 2,981 | 3,341 | 15,418 |  |  |
| Number of Crashes by Road User      |       |       |       |       |       |        |  |  |
| Pedestrian-Related Crashes          | 21    | 18    | 22    | 16    | 19    | 96     |  |  |
| Bicycle-Related Crashes             | 5     | 6     | 8     | 4     | 8     | 31     |  |  |
| Truck-Related Crashes               | 133   | 123   | 125   | 96    | 115   | 592    |  |  |

| Bicycle Serious Injuries                           | 1    | 1    | 0    | 2    | 0    | 4     |  |
| Motorist/Non-VRU Serious Injuries                  | 59   | 67   | 103  | 102  | 141  | 472   |  |
| Total  | 64   | 72   | 107  | 107  | 145  | 495   |  |

Crashes were reported across the county on interstates, state highways, and local roads. **Figure 6-1** is a heatmap showing the distribution of all recorded crashes that occurred not on an interstate. Areas in red have a more dense concentration of crashes, while areas in green have a more sparse concentration. Of those non-interstate crashes, 0.7% involved a pedestrian, 0.2% involved a bicycle, 1.7% resulted in at least one serious injury, and 0.4% were fatal. The highest densities of non-interstate crashes are in the cities of LaGrange and West Point. Some of the highest crash locations are seen at intersections along US 27, US 29, SR 100, and SR 109.

Figure 6-1: Crash Locations Heatmap

Data Source: GDOT Numetric, 2017-2021

**Figure 6-2** shows crashes involving commercial trucks are most concentrated along I-85 and US 219, while **Figure 6-3** and **Figure 6-4** show crashes involving pedestrians and bicycles, also referred to as Vulnerable Road Users (VRUs), are most concentrated in downtown LaGrange. Severe injury and fatal crashes are relatively evenly distributed across the network, shown in **Figure 6-5** and **Figure 6-6**, with a clustering of severe-injury crashes in LaGrange.

# 6.2 Roadway Operating Conditions

There are many ways to assess roadway operating conditions. One of the most common ways to describe traffic congestion is Level of Service (LOS), which assigns a letter to various congestion levels. Level of Service refers to alphabetical representations of roadway volume-to-capacity ratios that can describe traffic performance on a road or corridor segment. LOS levels range from A to F with levels A-C representing the most optimal traffic conditions. Similarly, it is useful to compare the amount of time it takes to make a trip during congested times and during non-congested, or "free flow" conditions. Speed is another important measure of roadway operation conditions, and origin-decision analysis reveals where people typically travel to and from.

The GSTDM is a travel demand model used to replicate the travel demand on transportation networks within a study area. The model uses a four-step transportation planning process which includes trip generation, trip distribution, mode choice, and trip assignment. The output consists of **daily volumes and level of service** for road segments in the study area. The model uses daily LOS, representing average volumes throughout the day; however, congestion tends to be higher during peak travel times on weekday mornings and afternoon and lower during off-peak travel times. Additionally, the GSTDM model can be used to forecast future demand on

transportation networks based on different SE data assumptions and can be used for identifying transportation network deficiencies and prioritizing transportation projects.

### 6.2.1 Level of Service

Level of Service is a measure of roadway traffic congestion on a scale from A (free flow conditions) to F (gridlock) as shown in **Figure 6-7**. It is based on the ratio of traffic volume to roadway capacity (number of travel lanes). While there are some limitations to the use of volume to capacity ratios for assessing traffic congestion, this approach is common in planning studies to provide an approximation of roadway traffic congestion. In Troup County, most roadways operate at LOS C or better as shown in **Figure 6-8**. However, there are some areas of higher congestion as indicated in the 2020 baseline travel demand model and in stakeholder input. Congested segments are listed in **Table 6-3**. The typical threshold for an acceptable LOS is D or better in urban areas and C or better in rural areas.

# 6.2.2 Congested vs Free-Flow Travel Time

Another way to look at roadway traffic congestion is to compare how long it takes on average to travel a roadway segment during congested times and during non-congested time when traffic is flowing freely. This comparison is also called travel time index and is expressed as a ratio in **Figure 6-9**. A value of 1.0 indicates little to no congestion meaning it takes the same amount of time to travel that road segment no matter what time of day, while a value of 2.0 indicates that it would take twice as long during congested periods. The map shows similar areas of congestion as in the 2020 LOS map.

Figure 6-9: Comparison of Congested vs Free Flow Travel Time, 2020

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset)

There are higher congestion time ratios located in downtown LaGrange along SR 27 and SR 109 that show congestion ratios greater than 2.0. Otherwise, the rest of Troup County show congestion ratios under 1.5.

### 6.2.3 Speed

Like LOS and travel time, speed is an indicator of roadway travel conditions and congestion. Speed data was obtained from the Regional Integrated Transportation Information System (RITIS) and is shown for roadways where the data is available. **Figure 6-10** shows the PM Peak Time (4:00 – 8:00 PM) speeds on major roads in Troup County. Slower speeds mostly occur in the downtown LaGrange area on US 27 with the highest congestion and lowest speeds on SR 109 connecting to I-85. On I-85, speeds reduce substantially only for the northbound direction during the PM peak. PM peak is a useful measure because it represents the most congested time of day.

Figure 6-10: PM Peak-Period Speed

Data Source: RITIS

The Off-Peak (10:00 AM - 2:00 PM) speed map in **Figure 6-11** shows a similar story to the peak speed map. One difference is that speeds on I-85 are higher during off-peak periods. Also, there is a north-bound segment of US 27 traveling away from LaGrange that gets slower during off-peak periods. For context, the maximum driving speeds for Georgia are 30 mph in urban districts, 35 mph on unpaved county roads, and 70 mph on rural interstates. The lower speeds in LaGrange do not necessarily indicate congestion, as speed limits are lower in the city. This analysis of congested and off-peak speed shows a similar pattern to the other measures of roadway congestion.

Figure 6-11: Off-Peak Speed

Data Source: RITIS

# 6.3 Traffic Signals

There are a total of 80 traffic signals in Troup County. Of these 80, 13 are maintained by the City of LaGrange, 10 are maintained by the City of West Point, and 57 are maintained by GDOT. While some of the signals might be maintained by local agencies, 81% of all the signals are owned by GDOT. Specifically, as indicated in yellow in **Figure 6-12**, GDOT owns eight signals in the City of LaGrange. The clustering of traffic signals towards the city center aligns with the lower speeds in the area (as shown in **Figure 6-12**).

Figure 6-12: Troup County Traffic Signal Locations, Categorized by Maintaining Agency

Data Source: SigOps GDOT, 2023

# 6.4 Bridge and Pavement Conditions

Maintenance of bridge and pavement conditions is essential to the safe and efficient movement of people and goods. The following is a summary of existing bridge and pavement conditions in Troup County.

### 6.4.1 Bridge Conditions

There are 168 bridges in Troup County, as identified by the Federal Highway Administration in its 2023 National Bridge Inventory (NBI). Of these bridges, 96 (57%) are GDOT owned and maintained, 71 (42%) are city or county owned, and one (<1%) is privately owned. **Figure 6-13** shows all bridges in the county and their current condition using the good/fair/poor designation required in the federal transportation performance measures (TPMs). Fortyone percent (41%) of the bridges are on the National Highway System (NHS). NHS bridges are critical because they are on roadways that have been identified as important to the nation's economy, defense, and mobility. NHS bridges may be eligible for certain federal funds for replacement when they have reached the end of their lifecycle. Seventy-four percent (74%) of the bridges are in good condition and 24% are in fair condition. There are three bridges in poor condition in the study area; however, none of them are on the NHS.

It should be noted that this is the most recent available NBI data but bridge improvements have been made since their assessment, so some bridges shown as poor or fair condition may be in good condition now.

Figure 6-13: Existing Bridge Conditions

Data Source: NBI, 2023

Table 6-4 shows the location and age of bridges in poor condition in the county, as of 2023.

Table 6-4: Bridges in Poor Condition

| Road               | Feature             | Year Built |
|--------------------|---------------------|------------|
| Thompson Road      | Polecat Creek       | 1965       |
| Mobley Bridge Road | Yellow Jacket Creek | 1950       |
| Glenn Road         | Whitewater Creek    | 1965       |

Data Source: NBI, 2023

# 6.4.2 Pavement Conditions

Pavement conditions of road segments, as of 2019, are shown in **Figure 6-14** according to the good/fair/poor designation required in the federal TPMs. These designations are based on International Roughness Index (IRI),
which evaluates the road surface roughness. A higher IRI value indicates poorer pavement condition. The road segments with poor pavement conditions concentrate in the City of LaGrange, several locations on I-85, Lower Big Springs Road, and Stovall Road. A few roads have a long segment where the current pavement condition is fair, including SR 18, SR 54, SR 100, Lower Big Springs Road, Stovall Road, Big Springs Mountville Road, Wares Cross Road, Cameron Mill Road, Whitaker Road, and Rock Mills Road. It should be noted that the pavement condition data is from an assessment performed in 2019 and pavement conditions could have since changed.

Figure 6-14: Current Pavement Conditions

Data Source: Highway Performance Monitoring System, 2019

## 6.5 Freight

Freight is an essential element of the transportation system, particularly in Troup County where manufacturing makes up nearly one-third of jobs.

The *Georgia Freight Plan* (2023) includes a truck freight network made up of roadways that serve large volumes of trucks. There are four Statewide Designated Freight Corridors going through the county, including I-85, I-185, US 27, and SR 109, as shown in **Figure 6-15**.

Figure 6-15: Georgia Statewide Designated Freight Corridors

Data Sources: GDOT, Georgia Freight Plan, Georgia Statewide Designated Freight Corridors, 2023

### 6.5.1 Freight-Related Land Use and Activity

There are several manufacturing facilities, warehouses, and distribution centers located within Troup County. Some of the larger facilities are Kia Motors, Walmart Distribution Center, Duracell, Weiler, Milliken, Interface, Sewon, and Badcock. Most of the freight-related land uses are concentrated along the I-85 corridor through LaGrange and West Point. **Figure 6-16** shows the locations of freight-related land uses within the county.

Figure 6-16: Freight-Related Land Use

Data Source: Georgia Power SelectGeorgia Existing Industrial Buildings, Google Earth

### 6.5.2 Truck Freight Activity and Commodities

According to Transearch commodity data, Troup County had 1,539,000 tons of goods shipped out and 1,418,000 tons of goods shipped into the county in 2019. The top three commodity types originating from Troup County were Machinery (38.7%), Bulk/Secondary/Intermodal (12.5%), and Textile (12.2%). The top three commodity types terminating within Troup County were Mining (24.0%), Waste (13.2%), and Bulk/Secondary/Intermodal (11.8%).

The Freight Analysis Framework (FAF) is provided by the Bureau of Transportation Statistics (BTS) and Federal Highway Administration (FHWA) and uses 2017 Commodity Flow Survey (CFS) and international trade data. The current version is FAF 5, with a base year of 2017 and forecast year through 2050. According to FAF Version 5, as illustrated in **Figure 6-17**, the annual tonnage being transported by truck on I-85 was estimated to be over 10,000 tons, followed by I-185 with estimated tonnage between 5,000 and 10,000 tons and US 27 with estimated tonnage between 2,000 and 5,000 tons.

Figure 6-17: Annual Freight Tonnage in 2022

Data Source: Freight Analysis Framework Version 5

FAF 5 average daily truck traffic data shows higher truck volumes on interstates, US routes, and state routes, including I-85, I-185, US 27, US 29, SR 109, and SR 219, as shown in **Figure 6-18**. I-85 is the only corridor in the county with estimated average daily truck trips of over 1,000, having over 2,000 daily truck trips in some sections.

Figure 6-18: Average Daily Truck Trips in 2022

Data Source: Freight Analysis Framework Version 5

### 6.5.3 Freight Origin-Destination Analysis

Most truck trips that begin in Troup County go outside the county. Less than 2% stay within the county, 31% go to the rest of Georgia, 10% go to Alabama, 6% go to Texas, and 4-5% go to Tennessee and Florida each. The remaining 42% travel elsewhere to other states. The destination counties and states are shown in **Figure 6-19**.

## **Truck Destinations**

Figure 6-19: Truck Destinations from Troup County

Data Source: Transearch, 2019

Origins and destinations of truck trips were generated by applying conversion factors from the Transearch manual to the truck freight tonnage going to other counties and states. **Table 6-5** shows the tons per truck per commodity group. This approach provides an estimate and does not reflect actual truck trips but is used for the purpose of comparison.

| Commodity Group                      | Tons per Truck |
|--------------------------------------|----------------|
| Agriculture products                 | 16.91          |
| Non-metallic mining                  | 24.31          |
| Food and Tobacco products            | 22.93          |
| Textile and apparel products         | 20.05          |
| Lumber, wood, and furniture products | 24.40          |
| Paper and printing products          | 23.18          |
| Chemical products                    | 20.85          |
| Petroleum and coal products          | 24.16          |

| Commodity Group   | Tons per Truck |
|---|----------------|
| Rubber, plastic, and leather products                       | 11.94          |
| Clay, stone, glass and concrete products                    | 16.24          |
| Primary metal products                                      | 24.90          |
| Fabricated metal products                                   | 17.97          |
| Machinery and transportation equipment                      | 14.36          |
| Instruments, and miscellaneous manufacturing products       | 16.21          |
| Waste and scrap materials                                   | 23.92          |
| Mail and miscellaneous freight shipments                    | 20.56          |
| Waste hazardous substances and hazardous materials          | 23.92          |
| Bulk movement, secondary, intermodal, and warehouse traffic | 17.06          |

According to Transearch freight volume data, the Georgia counties that receive the greatest freight volume from Troup County are mostly located in the metro Atlanta area and Savannah (Chatham County), as shown in **Figure 6-20**. **Figure 6-21** shows the origin counties for freight tonnage going to Troup County in 2019.

Figure 6-20: Freight Tonnage with Origin in Troup County

Data Source: Transearch, 2019

Figure 6-21: Freight Tonnage with Destination in Troup County

Data Source: Transearch, 2019

Of Georgia's 159 counties, Troup County is ranked 18<sup>th</sup> in origin and destination of manufacturing tonnage. The maps in **Figure 6-22** show the origins and to destination in each Georgia county by manufacturing tons.

Figure 6-22: Top Origin (Left) and Destination (Right) Counties for Manufacturing Tonnage in GA.

Data Source: GDOT State Freight Plan Update (2023) using FAF 5 Data

#### 6.5.4 Truck Parking

As shown in **Figure 6-23**, there are two public truck parking facilities located at weigh stations near I-85 Exit 23 with total truck parking spaces of 40, and six private truck parking locations throughout the county with total truck parking spaces of 212, along I-85 and SR 219. Based on recent analysis of truck parking, GDOT has reviewed and assessed truck parking across the state to identify potential strategies for increasing truck parking availability, such as additional truck parking capacity at rest areas, welcome centers and/or weigh stations through expansion on existing state-owned ROW or the repurposing or restriping of existing car parking spaces to serve trucks.

Figure 6-23: Truck Parking Locations in Troup County

Data Source: GDOT Truck Parking Analysis (2021)

### 6.5.5 Railroad Facilities

There are two freight rail lines crossing the study area, totaling 61 miles of tracks, one running from east to west over West Point Lake connecting Alabama and Georgia, the other one running from northeast to southwest paralleling US 29 that connects to the railroad hubs in Atlanta and Greenville. The two rail lines intersect in LaGrange. Both railroads are operated by CSX. **Figure 6-24** shows the railroad network within Troup County.

At-grade railroad crossing data was acquired from Federal Railroad Administration (FRA) Grade Crossing Inventory System (GCIS). There are 76 at-grade railroad crossings in Troup County, as shown in **Figure 6-24**. The total daily number of daylight (6:00 AM – 6:00 PM) through trains are as many as 34, and the total daily number of nighttime (6:00 PM – 6:00 AM) through trains are up to 14.

Out of the 76 at-grade railroad crossings, only two have advance warning systems in place, nine have flashing lights, and 32 have roadway gate arms installed. All the railroad crossings are equipped with at least one safety device, including pavement marking, stop/yield sign, flashing light, and/or gate arm. The crossings may become a cause for safety concerns in the coming years with the increase in freight movements.

Figure 6-24: Railroad Lines and At-Grade Railroad Crossings

Data Source: Federal Railroad Administration, 2021

### 6.5.6 Inland Port

The Georgia Ports Authority plans to construct an inland port facility in Troup County. The inland port is presented in both the Troup County and the City of LaGrange Comprehensive Plans. The Troup County Comprehensive Plan identifies an inland port as a potential opportunity for the county to support economic development. The port project is still in the early concept stage. It is planned to be located on a 200-acre parcel between I-85 and I-185, east of Callaway Church Road and north of the CSX rail line. The total volume of freight is estimated to be 100,000 rail lifts annually, largely supporting the automotive industry. There are similar inland ports around the state in northwest Georgia and a new facility soon to be under construction in northeast Georgia.<sup>33</sup>

## 6.6 Bicycle and Pedestrian Infrastructure

Although bicycle and pedestrian travel make up a small portion of transportation in the county, it is important to ensure that safe and adequate facilities are available to those not using a vehicle. Much of the county is rural and would not be expected to need an extensive bicycle and pedestrian network for non-recreational travel purposes.

<sup>&</sup>lt;sup>33</sup> Georgia Ports Authority, <u>https://gaports.com/facilities/inland-ports/</u> www.arcadis.com Troup County Long-Range Transportation Plan

Rather, these facilities are provided in areas where bicyclists and pedestrians would be expected, such as the cities' downtowns.

### 6.6.1 Pedestrian Facilities

The downtown areas in LaGrange, Hogansville, and West Point have sidewalks on at least one side of many but not all streets, and crosswalk markings and pedestrian signals are present at some intersections. There are some gaps in the sidewalk network where additional facilities would be beneficial, especially near community resources like schools, parks, churches, libraries, and grocery stores.

### 6.6.2 Bicycle Facilities

Dedicated bicycle lanes are provided along a few roadways such as County Club Road, Youngs Mill Road, and Calumet Center Road in LaGrange. Otherwise, dedicated on-street bicycle facilities are not prevalent across the county.

#### 6.6.3 Trails

The Thread Trail is a paved urban, multiuse trail. The sections that are currently open are in and around Downtown LaGrange connecting Granger Park, West Haralson Street, Broad Street, County Club Road, Church Street, North Lewis Street, Bull Street, Pierce Street, and through LaGrange College. The trail is part of a 30-mile planned trail network extending beyond the downtown core to surrounding communities and destinations.<sup>34</sup> **Table 6-6** and **Figure 6-25** show the segments that make up the Thread Trail System. Additionally, there are several unpaved trails in the parks and natural areas surrounding West Point Lake.

| Trail Segment                         | From   | То   |
|---------------------------------------|--|--|
| Granger Park Trail                    | West Haralson Street   | Smith Street   |
| Country Club Road Trail               | Roundabout on the north side of LaGrange College at Broad Street | Southwest side of Country Club Road<br>north of Hollis Hand Elementary School<br>at the new connector road |
| Vernon Woods Drive Extension<br>Trail | Country Club Road  | Vernon Street and Vernon Woods Drive<br>Intersection   |

Data Source: TheThreadTrail.org

# 6.7 Public Transportation

Troup County offers demand response public transportation service through Troup Transit. This is a program that is offered by Troup County Parks and Recreation and gives priority to elderly individuals as well as individuals with disabilities. Currently, Troup Transit operates between 7:00 AM and 4:00 PM for five days of the week. The service costs \$2.00 for a one-way trip and requires a call from users 24 and 48 hours in advance. **Figure 6-26** shows information relating to Troup Transit's average ridership, vehicles, and expenses between FY 2019 and FY 2021 from the National Transit Database.

#### Troup Transit (2019 through 2021)

Figure 6-26: Troup Transit Facts, FY 2019-2021 Averages.

Data Source: National Transit Database, FY 2019-2021.

## 6.8 Aviation

There is one publicly operated airport in Troup County, which is the LaGrange-Callaway Airport. The airport is located three miles from the heart of the City of LaGrange, which can be seen in **Figure 6-27**. The airport currently serves the needs of general and business aviation users and operates two runways and forty hangars throughout its concourse. In 2021, the airport had 15,100 aircraft operations, with 99% as general aviation and 1% as military aviation.

Figure 6-27: Airport

# 7 Future Conditions and Potential Improvements

This chapter describes anticipated future conditions related to the transportation system and the process for identifying potential improvements, such as transportation infrastructure projects. A complete list, map, and summary of the final projects is provided in **Chapter 8 Identified Projects**.

## 7.1 Safety Improvements at Crash Hotspots

This section summarizes safety issues in the county based on an assessment of crash data presented in **Section 6.1 Safety and Crashes** and makes suggestions towards the types of projects and policies that could be implemented to address those issues. Additionally, with forecasted increases in population and employment throughout the county, and the associated increase in people and vehicles on the roadways, road safety cannot be expected to improve without targeted investments in safety-related projects. Evaluation of high-crash locations from historical data helps to identify priority locations for such improvements.

Within Troup County, there were 15,418 crashes, 495 serious injuries, and 78 fatalities reported between 2017 and 2021 from GDOT's Numetric crash database. High-crash intersections and corridors are shown in **Figure 7-1**. The subsequent sections assess high-crash intersections and corridors.

Figure 7-1: High-Crash Locations

Data Source: GDOT Numetric 2017-2021

### 7.1.1 High-Crash Intersections

GDOT Numetric's intersection analysis tool was used to analyze crash data and to identify high-crash intersections. A threshold of 50 crashes over the 5-year period was selected to represent high-crash intersections. **Table 7-1** below lists intersections above this threshold in order by crash rate, which measures the number of crashes occurring for every million vehicles entering the intersection. All intersections listed here, except for SR 219/Whiteville Road & Pegasus Parkway, are located within the city limits of LaGrange.

| Intersection   | Crash Rate<br>(Per Million<br>Vehicles<br>Entering the<br>Intersection) | # of<br>Crashes<br>(2017-2021) | Control Type |
|--|---|--------------------------------|--------------|
| SR 109/Lafayette Parkway @ South Davis Road          | 5.24  | 346                            | Signalized   |
| SR 219 @ Pegasus Parkway                             | 4.01  | 100                            | Signalized   |
| SR 14/Hogansville Road @ South Davis Road            | 3.07  | 96                             | Signalized   |
| SR 109/Lafayette Parkway @ Horace King Street        | 3.01  | 121                            | Signalized   |
| US 29/Vernon Rd/Greenville Road @ N Greenwood Street | 2.98  | 275                            | Signalized   |
| US 27/SR 219 @ Whitesville Street                    | 2.79  | 118                            | Signalized   |
| SR 109 @ Calumet Center Road                         | 2.30  | 80                             | Signalized   |
| US 29 @ Bull Street/W Lafayette Square               | 2.18  | 178                            | Signalized   |
| US 29 @ Buena Vista Avenue                           | 2.04  | 59                             | Unsignalized |
| US 29 @ Young Miller Road                            | 2.00  | 98                             | Signalized   |
| US 29 @ Roanoke Road                                 | 1.74  | 69                             | Signalized   |
| SR 219/Mooty Bridge Road @ N Greenwood Street        | 1.67  | 55                             | Unsignalized |
| SR 219 @ Lukken Industrial Drive W                   | 1.36  | 50                             | Signalized   |

Table 7-1: High Crash Intersection (2017-2021)

In March of 2022, GDOT conducted a Road Safety Audit (RSA) on SR 109/Lafayette Pkwy from Pine Circle to Callaway Church Rd.<sup>35</sup> The RSA produced improvement recommendations to address safety concerns along the corridor, including a recommended intersection re-configuration and signalization project at SR 109 & Chick-Fil-A Driveway near Patillo Rd. That project is included in the project list in **Chapter 8 Identified Projects**. Other recommendations from the RSA are already in progress.

The intersection at SR 109/Lafayette & South Davis Road was studied in detail as part of a GDOT RSA, and improvements for the intersection are included within PI 0014079: SR 14 Spur/S. Davis Road widening from SR

<sup>&</sup>lt;sup>35</sup> GDOT (2022), Road Safety Audit – Final Report: SR 109/Lafayette Pkwy www.arcadis.com Troup County Long-Range Transportation Plan

109/Lafayette Parkway to SR 14/U.S.20/Hogansville Road. Therefore, this plan does not identify additional safety improvements at that location.

Another RSA was conducted in August of 2023 on SR 1/SR 219/US 27/New Franklin Road from Fleming Place to Alton Drive. Several recommendations were made and discussed with the Troup County planning team. Ultimately, two projects were added for intersection improvements at US 27 at Franklin Street and pedestrian crossing improvements on US 27 near Colonial Street/Walmart entrance area. Some areas highlighted in the RSA were located at the termini of existing capacity projects that are anticipated to include the intersections (e.g., US 27 at Mooty Bridge Road and SR 109 at Calloway Church Road).

For the remaining twelve high-crash intersections, a list of potential improvements to address possible safety matters is included in **Chapter 8 Identified Projects**. These intersections should be analyzed further using GDOT's Intersection Control Evaluation (ICE) to understand the exact causes of crashes and identify the most appropriate solutions. The ICE should include an assessment of roadway geometry, lane and signal configurations, and pavement and lighting conditions. FHWA offers the following proven safety countermeasures for consideration:

- Intersection safety improvements
- Install reflective signal backplates to improve signal visibility
- Access management (i.e., limiting driveway access adjacent to intersections)
- Implement dedicated left-turn lanes/protected left-turn phases
- Conduct signal warrant studies at unsignalized intersections
- Roundabout replacement

#### 7.1.2 High-Crash Corridors

Based on the previously presented crash data, five major corridors were identified as part of a high-crash network across Troup County: I-85, US 27, US 29, SR 109, and SR 219. These corridors account for 62.8% of roadway fatalities (49 out of 78), 57.0% of severe injuries (282 out of 495), and 45.5% of all crashes (7,021 out of 15,418) within Troup County from 2017-2021.

This network includes interstate, major arterial, minor arterial, and collector corridors, experiencing a wide range of traffic volumes. These corridors should be further analyzed with RSAs to understand the degree of safety deficiencies and the most appropriate countermeasures to reduce crashes. RSAs should include an assessment of speeding behavior, roadway geometry, access management, and pavement conditions. To narrow the focus and increase programmability of identified projects, opportunities for corridor safety audits were identified for the follow segments:

- US 27/Martha Berry Highway from Davis Road Bypass/N Davis Road to US 29/SR 14/Commerce Drive
- US 27/Martha Berry Highway from US 29/ SR 14/Commerce Drive to I-85 Interchange
- US 27/Hamilton Road from I-185 Interchange to Oak Grove Road
- US 29/West Point Road from Roanoke Road to Lower Glass Bridge Road
- SR 109 from Roanoke Rd to Pine Circle
- SR 219 from Northridge Rd to US 29/SR 109
- SR 219 from US 29/SR 109 to I-85 Interchange

There are several specific potential projects along these corridors, as well. Depending on the implementation timeframes of the projects, it may be beneficial to conduct these RSA studies ahead of those infrastructure projects in order to identify opportunities for safety improvements when developing the specific scope elements for those infrastructure projects.

# 7.2 Improvements to Address Future Roadway Operating Conditions

Future roadway congestion is forecasted using the GSTDM. At the time of the modeling for this plan, the current model was the 2015/2050 GSTDM. The future population and employment growth for the county were updated based on direct input from the cities and county. The updated model reflects higher future population and employment growth than the statewide estimates. In addition to accounting for future growth, the future 2035 and 2050 baseline (also referred to as "no-build") models also reflect any projects that are underway or programmed for construction within the next three years.

### 7.2.1 Future Baseline LOS Conditions

Future LOS forecasts are referred to as baseline (or "no-build") because they do not include any additional transportation improvement projects beyond what has already been built and the projects programmed for construction within the next three years (listed in **Table 7-2**). The future baseline forecasts include additional trips and congestion associated with forecasted population and employment growth. The maps in **Figure 7-2** and **Figure 7-3** show the 2035 and 2050 forecast LOS, based on roadway volume to capacity ratios. These maps help to identify areas that are anticipated to become congested and may benefit from transportation projects to prevent or mitigate congestion. Once projects are identified, the baseline maps are compared to the "build" maps, which include the identified projects, to assess how well the proposed improvements address future congestion. It should be noted that the model only takes into account roadway and transit capacity and interchange projects. However, there are many other project types that can reasonably be expected to provide congestion and other benefits. For example, intersection operational improvements and access management strategies can provide substantial congestion relief but are not reflected in the model.

| Project<br>Ref. No. | Facility                           | Extents   | Existing<br>Configuration  | Improved<br>Configuration | Source             |
|---------------------|------------------------------------|---|----------------------------|---------------------------|--------------------|

Table 7-2: Near-Term Capacity Projects included the Future Baseline Scenarios

**Figure 7-2** shows the baseline LOS map for 2035 in Troup County. LOS F can be found on the northeast portion of I-85 and on a small segment of SR 109 within LaGrange. Additional LOS E segments are found on other parts

#### Chapter 7 – Future Conditions and Potential Improvements

of I-85 and SR 109 outside LaGrange, meaning daily congestion can be found on these road segments. For the most part, rural road segments are showing relatively little congestion with LOS C or better.

Figure 7-2: 2035 Baseline Level of Service, Daily

**Figure 7-3** shows the baseline LOS conditions for the year 2050. In 2050, most of the LOS C or better becomes more congested to LOS D, and LOS D similarly becomes more congested into LOS E. The segments of I-85 and SR 109 continue to operate at LOS F. Daily congestion increases overall, but especially in areas of LaGrange, Hogansville, and US 27.

Figure 7-3: 2050 Baseline Level of Service, Daily

Data Source: GDOT Georgia Statewide Travel Demand Model, (2015/2050 GSTDM Dataset), with socioeconomic data updated based on stakeholder input

### 7.2.2 Congestion-Related Projects

Projects were identified to address existing and future traffic congestion and associated operational issues. In some cases, roadway widening to add more travel lanes or new roadways were determined to be necessary to accommodate future growth projections. In other cases, operational improvements such as access management, turn-lanes, or signal improvements were identified. Due to the costs and impacts of roadway widening and new roads, all options were considered before identifying the selected solution. The identified projects list, including congestion-related projects, is provided in **Chapter 8 Identified Projects**.

## 7.3 Bridge Improvements

Within Troup County, there are 170 bridges. Of these, 57% are owned and maintained by GDOT, 42% are owned by the city or county, and <1% is privately owned. As mentioned in **Section 6.4.1 Bridge Conditions**, three bridges were noted as being in poor condition as of 2023 National Bridge Inventory data, but one (Thompson Road at Polecat Creek) was recently improved as of late 2023.

As shown in **Table 7-3**, seven bridges are identified for improvement. All identified bridge projects were reviewed by the GDOT Bridge Office to ensure that they align with that office's determination of bridge conditions and project statuses. In addition to these bridges, other bridges will experience a decline in condition over time. GDOT, Troup County, and the cities should continue to inspect bridges at regular intervals to update condition ratings and prioritize those that are in poor condition.

| Table 7-3: Bridges in Need of Improve | ements |
|---------------------------------------|--------|
|---------------------------------------|--------|

| Road                             | Feature                                 | Reason for Improvement              |
|----------------------------------|---|-------------------------------------|
| Mobley Bridge Road               | Yellow Jacket Creek                     | 2023 NBI Poor Condition Bridge      |
| Glenn Road                       | Whitewater Creek                        | 2023 NBI Poor Condition Bridge      |
| Adams Road                       | Big Branch                              | PMT/Troup County Input              |

## 7.4 Freight Improvements

There are four corridors in Troup County that are part of the Georgia Statewide Freight Network – I-85, I-185, US 27 and SR 109. US 29 and SR 219, while not part of the Statewide Freight Network, are two other major corridors in the county that carry a significant volume of daily freight traffic. There are two CSX-operated freight rail lines with 76 at-grade crossings in the study area. As both truck and rail freight traffic in and through the county continues to increase, improvements should be made to the freight network to accommodate growing industry activity, while also mitigating negative freight impacts on residents of Troup County. This section outlines currently planned freight improvement projects in Troup County and identifies additional projects.

### 7.4.1 Future Freight Forecasts

According to Transearch freight forecasts, the tonnage of materials moved by freight for Georgia's key industry groups will approximately double from 2019 to 2050, as shown in **Figure 7-4**.

Figure 7-4: Forecasted Growth in Freight Tonnage

Also based on Transearch freight volume forecasts, the Georgia counties that will receive the greatest freight volume from Troup County in 2050 are mostly located in the metro Atlanta area and Savannah (Chatham County), as shown in **Figure 7-5**. **Figure 7-6** depicts the origin counties for freight tonnage going to Troup County in 2050. This is a similar pattern to the 2019 Transearch data presented in **Section 6.5 Freight**.

Figure 7-5: Freight Tonnage with Origin in Troup County, 2050

Data Source: Transearch, 2050

Figure 7-6: Freight Tonnage with Destination in Troup County, 2050

Data Source: Transearch, 2050

### 7.4.2 Planned/Underway Freight Projects

The US 27 corridor, SR 109, and the interstates (I-85 and I-185) carry substantial truck volumes and are on Georgia's State Freight Network. The Georgia Freight Plan (2023) identifies US 27 as a potential alternate freight route between Tennessee and Florida, relieving truck traffic in metro-Atlanta and directing more truck traffic through LaGrange and Troup County. As such, there are multiple improvement projects planned or underway at the following locations along the US 27 corridor:

- PI 322250 US 27 from Auburn Street to SR 219/Morgan Street, widening to four lanes (under construction, as of late 2023)
- PI 0008670 US 27 from CR 188/Old Chipley Road to I-185 widening to four lanes (long-range)
- PI 0008671 US 27 from I-185 to I-85, widening to four lanes (long-range)

The latter two projects are included as identified projects in this plan.

#### 7.4.2.1 Freight Connectivity Between US 27 and the Interstates

For several years, there have been discussions among GDOT and the county and cities about potential bypasses around LaGrange to facilitate access between US 27 and I-85 and I-185 without traveling through downtown LaGrange. Several alignments and solutions have been considered to varying degrees. For example, a bypass north of LaGrange (PI 362910-) and an interchange connecting directly to I-85 and I-185 (PI 310730-) were planned but ultimately discontinued in 2016 due to cost and environmental concerns (such as wetlands, lake, archaeology, etc.).

#### 7.4.2.1.1 Truck-Only Bypass Scoping Study

Concurrent to the *Troup County Long-Range Transportation Plan*, a LaGrange Truck Bypass scoping study was conducted and concluded in fall 2023. This project was a scoping phase to study concepts for a new 1.5-mile truck-only bypass located between the interchange of I-85 and I-185 to the stub at SR 1/US 27 three miles north of downtown LaGrange in Troup County. The scoping study was conducted from the cancelation of the two aforementioned projects (PI 362910- and PI 310730-). The scoping study did not ultimately recommend a truck-only bypass at this location.

#### 7.4.2.1.2 Three-Phase Bypass

As an alternative to the previously considered bypass connecting directly to I-85 and I-185, a scaled-down alternative alignment, the "three-phase bypass" (PI 0014077, PI 0014078, PI 0014079) was programmed by GDOT, as shown in **Figure 7-7**. This bypass shifted the southern terminus of the corridor from I-185 to the intersection of SR 109 at SR 14 west of I-85. Right-of-way acquisition of the three-phase bypass was underway during development of this *Troup County Long-Range Transportation Plan*.

Figure 7-7: Three-Phase Bypass on North Davis Road

#### 7.4.2.1.3 Other Related Projects

A few other projects have been considered and added to GDOT's long-term program (beyond 2050). These include widening South Davis Road from SR 109 to SR 219 (PI 0008678) and widening SR 1/US 27 from I-185 to I-85 (PI 0008671). Together with the three-phase bypass, these projects would provide additional continuous four-lane facilities from US 27 to I-85 and I-185 around LaGrange. These longer-term projects were also evaluated as part of this plan.

#### 7.4.2.1.4 Proposed Improvements to Freight Connectivity Between US 27 and the Interstates

The potential improvements shown in **Table 7-4** were identified as part of this plan to address connectivity among US 27, I-85, and I-185.

| Table 7-4 <sup>.</sup> Proposed | Improvements to Fre  | eiaht Connectivity | Between US 27 | and the Interstates |
|---------------------------------|----------------------|--------------------|---------------|---------------------|
|                                 | improvements to rife | Signi Connectivity | Delween 03 Zr |                     |

### 7.4.3 Identified Freight Roadway Improvements

To support growing freight-related businesses in Troup County and increasing through-traffic on established freight routes, freight improvements should be made to corridors not on the State Freight Network that still experience high volumes of truck traffic. Improvements to consider include widening existing lanes, increasing turn queue storage length, upgrading surface material from asphalt to concrete, deploying access management to reduce number of conflict points with driveways, and reconfiguring intersections for wider turn radii. The following roadway segments were identified for potential corridor freight improvements on their own or in conjunction with other projects, such as planned widenings.

- SR 219/Whiteville Road (from US 27 to Pegasus Parkway)
- SR 219/Whiteville Road (from New Hutchinson Mill Road to SR 18/county line)
- SR 109/Greenville Road (from Callaway Church Road to Meriwether County line)
- US 27 (from US 29/Commerce Avenue to North Page Street)
- South Davis Road (from Upper Big Springs Road to US 27/Hamilton Road)

In addition to the above high truck traffic corridors, Davis Road from US 27/Hamilton Road to US 27/Martha Berry Highway should also be considered for freight corridor improvements. US 27, US 29, SR 219, and SR 109 all intersect at the center of LaGrange, bringing high volumes of truck traffic to the narrow streets of LaGrange's downtown, creating bottlenecks. Rather than applying freight corridor treatments to the historic downtown neighborhood, Davis Road in east LaGrange should be modified (including widening) to function as a bypass to redirect north-south truck traffic on SR 219 and US 27 away from and around downtown LaGrange. Additionally, through-access for large trucks should be restricted on Bull Street and Main Street in downtown LaGrange. All identified freight projects are shown in **Chapter 8 Identified Projects.** 

Troup County Long-Range Transportation Plan

### 7.4.4 Identified Freight Railroad Improvements

At-grade rail crossings without active warning devices are known as passive crossings. These types of crossings have no method of indicating if a train is approaching or occupying the crossing, and therefore can present a hazard to vehicles approaching the crossing. Of the 76 at-grade crossings in Troup County, 67 are passive, lacking active flashing indicator beacons, and 44 lack safety gate arms. These crossings should be further evaluated for active crossing safety improvements such as installation/upgrade of active warning safety devices to alert drivers to oncoming trains. Federal funds for safety improvements at at-grade rail crossings may be available for upgrading these crossings through the Section 130 Program, administered by GDOT.<sup>36</sup>

In addition to safety issues, the FRA, local reports, and stakeholder engagement indicate that some at-grade crossings are regularly blocked by stationary trains for extended periods of time.<sup>37</sup> These crossings serve as key connection points between communities and places of business, requiring significant detours for vehicles and reducing connectivity for residents and commuters. **Table 7-5** below provides a list of crossings reported as being frequently blocked and additional information on each location. GDOT Planning met with the GDOT Office of Utilities to discuss and refine the potential railroad crossing projects.

| Crossing Location   | Blockage Information  |  |
|---|---|--|
| Green Avenue/Johnson Street, adjacent to US 29/SR 14 in Hogansville   | These three consecutive north-south crossings<br>divide Hogansville in half and are frequently<br>blocked for several days at a time, often by a single<br>train, frustrating local residents and city council<br>members. <sup>38</sup> They are also listed as frequently<br>blocked in the FRA Public Blocked Crossings<br>Incident Reporter database. |  |
| SR 54, adjacent to US 29/SR 14 in Hogansville, GA                     |   |  |
| East Boyd Road, adjacent to US 29/SR 14 in Hogansville                |   |  |
| Gabbettville Road, near Robert Taylor Rd in southwest<br>Troup County | This crossing falls on a key route for workers of Kia<br>manufacturing plant commuting from the north and<br>west. When it is blocked, the detour required is up<br>to 10 miles long. It is also listed as frequently<br>blocked in the FRA Public Blocked Crossings<br>Incident Reporter database.   |  |
| US 29/West Point Road in West Point                                   | This crossing is listed on the FRA Public Blocked Crossings Incident Reporter database.   |  |
| SR 109/Roanoke Road in LaGrange                                       | This crossing is listed on the FRA Public Blocked<br>Crossings Incident Reporter database and<br>identified by the Project Management Team  |  |

Table 7-5: Frequently Blocked At-Grade Rail Crossings

<sup>36</sup> <u>https://www.dot.ga.gov/GDOT/Pages/RailroadSafety.aspx</u>

<sup>37</sup> <u>https://www.fra.dot.gov/blockedcrossings/</u>

<sup>&</sup>lt;sup>38</sup> <u>https://www.wsbtv.com/news/georgia/neighbors-are-fed-up-with-stalled-trains-blocking-</u>roads/TVOBUYMYOND4PNSFA4P343EBMU/

| Crossing Location                         | Blockage Information  |
|---|---|
| US 29/SR 14/West 7th Street in West Point | This crossing is listed on the FRA Public Blocked<br>Crossings Incident Reporter database and<br>identified by the Advisory Committee |

In the short-term, a potential solution is the installation of variable message signs on the approaches to these crossings to warn drivers of active blockages and identify alternative detour routes. In the long-term, there may be a need to consider reconfiguring these crossings to be separate grades to reduce impacts of stationary trains on road network connectivity and safety. Specific projects are shown in **Chapter 8 Identified Projects**.

## 7.5 Bicycle and Pedestrian Improvements

The bicycle and pedestrian network in Troup County is primarily concentrated in downtown areas, close to activity centers. Improvements to these networks will allow people to utilize current facilities for more than recreation and incorporate these active modes of transportation into their daily commute. Currently, there are some streets in LaGrange, Hogansville, and West Point that have incomplete or one-sided sidewalk networks that need to be filled or developed to connect people to community resources. Bicycle lanes are sparsely located along a few roadways in LaGrange, but there is not a continuous or consistent network. In addition to the lack of connectivity, the existing pedestrian and bicycle system presents safety challenges for all roadway users, especially vulnerable road users, such as bicyclists and pedestrians. The following sections outline improvements that can be made to address these matters and enhance the effectiveness of pedestrian walkways and bikeways.

### 7.5.1 Identified Pedestrian Facility Improvements

There are several variations of pedestrian facilities that can be implemented in the county, each addressing opportunities for the surrounding community and environment. Connected sidewalks and pedestrian signalization are essential for people to be able to use walking as a primary mode of transportation, rather than just for recreational purposes. The first step to achieving this would be identifying conflict points that have high pedestrian-related crash rates. These locations not only indicate an unsafe or non-existent pedestrian infrastructure, but also reveal locations where people are frequently trying to access as part of their travel or commute. High pedestrian and vehicular traffic locations should be the first locations to identify, as they will likely overlap with pedestrian-related crash rates. The following roadways were identified for developing or improving pedestrian infrastructure.

- Commerce Avenue from Martha Berry Hwy to Youngs Mill Road (7 crashes, 2017-2021)
  - Currently no sidewalks on this segment
- Martha Berry Hwy from Lafayette Parkway to Davis Road Bypass (7 crashes, 2017-2021)
  - o Currently incomplete sidewalks on both sides of the segment

Other such projects have been identified through public input in previous plans. In addition to sidewalk projects, the trail system is one of the main components of the recreational culture in Troup County. With West Point Lake located just west of LaGrange, and large greenspaces surrounding the urban areas, the City of LaGrange has developed what is known as the Thread Trail System that is intended to connect residents within and outside of the city through multi-use pathways. This plan, completed in 2016, has segmented the trail network into 21 sections. The segments that have not yet been constructed are included as projects in this plan, as listed in **Chapter 8 Identified Projects**.

#### 7.5.2 Identified Bicycle Facility Improvements

There are many types of bicycle infrastructure that can be implemented, based on the traffic level and roadway configuration of different areas. Bicycle infrastructure can be used to enhance connectivity and improve safety for all roadway users. **Figure 7-8** identifies some types of bicycle infrastructure that can be implemented according to the LTS (Level of Traffic Stress) experienced by cyclists.

#### **High Stress**

Low Stress

Figure 7-8: Bicycle Infrastructure Types

Image Source: National Association of City Transportation Officials (NACTO)

In Troup County, there are currently few bicycle-specific facilities. The places that would benefit most from expanding the bicycle network are residential neighborhoods, activity centers, downtowns, and major employment sites. This would allow people to use biking as a form of transportation for their commute or completing errands, in addition to recreation or leisure. Identified projects for bicycle facilities include build out of the Thread Trail system and additional multiuse trail segments on Sewon Boulevard and Lukken Industrial Drive, which are important for access to major employment areas. Specific projects are shown in **Chapter 8 Identified Projects**.

## 7.6 Transit Improvements

Transit services provide mobility options to residents, workers, and visitors. Access to transit service can help accommodate future growth in the county and expand employment opportunities. Transit is especially important for people without access to a vehicle, people with disabilities, young people, and aging seniors. Many people in these demographic groups may rely on transit as a primary form of transportation. This section provides transit-related projects identified for the county.

### 7.6.1 On-Demand Transit and Microtransit

Troup Transit currently offers on-demand transit services, giving priority to seniors and those with disabilities. One way to increase awareness and use of the service is to develop and provide marketing materials in community facilities and popular destinations. In addition, expansion of the operating hours of the service would be beneficial. Currently, Troup Transit operates from 7:00 AM – 4:00 PM, expanding operating hours would capture workforce related-trips.

To support expansion of service, as well as promote regional connectivity, Troup Transit should consider a partnership with the Three Rivers Regional Commission. The Three Rivers Regional Commission provides ondemand service for surrounding Butts, Carroll, Lamar, Meriwether, Pike, Spalding, and Upson Counties.

Additionally, the Georgia 2050 Rural and Human Services Transportation Plan provides several recommendations applicable to Troup County regarding regional coordination, partnerships, and expansion of services. Relevant recommendations from this plan were adapted slightly to meet the needs of the County and are shown in **Table 7-6**.

| Improvement  | Description   | Source          |
|--|---|-----------------|
| Leverage Let's<br>Ride app and<br>other existing<br>technologies         | Adopt Let's Ride app for Troup Transit services. The Let's Ride app<br>connects Georgia riders to their local rural transit service provider and<br>allows them to schedule trips. Riders can book a one-way trip or a round-trip<br>for tomorrow or in the future. Let's Ride is not a direct service but a<br>connection to a service. The app is free for users to download and use. |                 |
| Expand capacity of rural systems   | Expand capacity of existing rural systems to serve unmet trip need either through additional vehicles/ drivers or through coordination with other providers.  | Georgia<br>RHST |
| Leverage the<br>Regional<br>Commission                                   | Coordinate with Three Rivers Regional Commission for potential partnerships to expand services in Troup County.   | Georgia<br>RHST |
| Expand service<br>hours  | Providing longer transit service hours will help account for and meet the transportation needs of early morning and late-night shift workers either through additional vehicles/drivers or through coordination with other providers.   | Georgia<br>RHST |
| Expand<br>secondary<br>education and<br>transit provider<br>partnerships | Coordinate with secondary education providers for potential partnerships to expand workforce/ apprenticeship trips.   | Georgia<br>RHST |

#### Table 7-6: Transit Recommendations for the GDOT RHST Plan
| Improvement  | Description  | Source          |
|--|--|-----------------|
| Create<br>connections to<br>activity centers   | Explore microtransit and connections to activity and workforce destinations.   | Georgia<br>RHST |
| Develop branding<br>and marketing<br>materials                                       | The use of messaging, marketing, and information campaigns will improve<br>the public's understanding of public transportation and its benefits to the<br>entire community. GDOT is working with local providers to develop<br>marketing plans and toolkits for their agencies, including social media and<br>graphical support, to help enhance providers' online presence. | Georgia<br>RHST |
| Designate<br>rideshare pick-up<br>and drop off<br>locations at major<br>destinations | Adopt curbside policies for pick-up and drop-off for rideshare users.  | Stakeholder     |

## 7.6.2 Ridesharing Services

Mobile application-based services such as Uber and Lyft operate in the county. These Transportation Network Companies (TNCs) have the potential to operate at all hours, depending on driver availability. TNCs can play a major role in providing an alternative mode of access to work and retail destinations. However, while curbside pick-up and drop-off provides convenience for ridesharing users, it can disrupt traffic flow on some streets. Development of policies and designation of specific areas for pick-up and drop-off locations, especially in downtown LaGrange, can help improve efficient operations of ridesharing services and reduce disruptions to the transportation system.

## 8 Identified Projects

This chapter provides an overview of the identified transportation projects in Troup County. The project list is the result of a review of previous and existing plans, existing GDOT programmed projects, analysis of existing conditions, stakeholder input, and assessment of potential improvements based on the expected future conditions as described in Chapters 5 Review of Existing Studies, Plans, and Documents, Chapter 6 Assessment of Existing Transportation Facilities, and Chapter 7 Future Conditions and Potential Improvements. This chapter also provides analysis of the anticipated impacts of the projects on future conditions and information about project costs. Identified projects are organized by project type, as shown in Figure 8-1.

Figure 8-1: Summary of Identified Projects

Most of the identified projects are intersection improvements that are expected to improve safety and traffic operations. Intersection projects are at locations identified based on crash records, congestion analysis, and through collaboration with local stakeholders. Capacity projects represent the second largest project category. This type of project is intended to provide additional capacity and improve operations and efficiency of the transportation network through widening existing or constructing new roadways. Many of these projects already exist in GDOT's work program and are further informed by this planning analysis.

Projects listed and shown in this report do not constitute a commitment of funding. Potential projects would be considered for federal, state, and/or local funding, as applicable, through existing GDOT and local procedures for project programming.

## 8.1 Identified Project Maps and List

The following maps show all identified projects across all implementation timeframes (Figure 8-2), followed by separate maps for the following timeframes: Near-Term (projects that could be complete or under construction

within 10 years), Mid-Term (projects that could be completed or under construction within 25 years), and Future Analysis (implementation timeframe to be determined). The Future Analysis projects do not have a specific implementation timeframe defined, as they require additional analyses to better understand the issues and funding availability. Additionally, a few projects are anticipated to require 25+ years to complete (Illustrative).

The map of all identified projects (**Figure 8-2**) shows a concentration of projects along state routes in and around the City of LaGrange, City of Hogansville, and City of West Point. Capacity projects provide increased access through the county and between each of the cities, while intersection and bicycle or pedestrian projects are located in areas of high-density land use, such as downtown LaGrange.

Figure 8-2: All Identified Projects

Near-term projects (**Figure 8-3**) primarily include GDOT projects with the current completed or ongoing construction estimates within approximately 10 years and bike or pedestrian projects from the Thread Trail System Master Plan. Noteworthy capacity projects include the construction of the LaGrange Bypass with projects C-1, C-2, and C-3. The interchange project (I-3) in Hogansville is expected to improve traffic conditions with the construction of roundabouts at the I-85 at SR 54 ramps.

Figure 8-3: Identified Near-Term Projects

Mid-term projects that could be completed or in progress within 25 years include several existing GDOT projects and capacity or intersection projects intended to improve safety and operations (**Figure 8-4**). Projects along state routes provide capacity improvements along and around I-85 and I-185. Intersection improvements are also identified and scattered throughout the county to improve safety and traffic operations.

Figure 8-4: Identified Mid-Term Projects

The projects shown in **Figure 8-5** have been identified as addressing specific existing or future opportunities but require additional analysis to determine the appropriate implementation timeframe. Some of these projects could be implemented in the near or mid term, depending on funding availability, while others may need more time, including potential scoping studies to more fully define the project components, configuration, and the exact location in some cases.

Figure 8-5: Identified Future Analysis Projects

The list in **Table 8-1** includes all identified projects organized by project type. It lists the entity anticipated to lead or champion the project towards implementation as the anticipated project sponsor. Costs are shown in year of expenditure (YOE) assuming a 2% annual growth rate. Projects that do not have a defined implementation timeframe due to requiring further scoping or analysis are shown in 2022 dollars.

#### Table 8-1: Identified Projects List

### 8.1.1 Illustrative Projects

Some projects were identified that are likely to be needed in the longer-term and would likely require more than 25 years to complete. These include interstate widenings on I-185 and I-85 in the southern portion of the county, as well as some bridge projects that are programmed for later than 2050. The Illustrative projects are included in the map of all projects show in **Figure 8-2** and listed in **Table 8-2**.

#### Table 8-2: Illustrative Projects

### 8.1.2 SR 109 from South Davis Road to Callaway Church Road

The segment of SR 109 (Lafayette Parkway) between South Davis Road and Callaway Church Road was identified as having a variety of issues for which the type and timing of project implementation needs special consideration. This area is shown in **Figure 8-6**.

The area is expected to have a variety of challenges with the completion of the three-phase bypass, widening of SR 109/Lafayette Parkway to the east (Project C-5), and the development of the planned West Central Inland Port. In the middle of the segment is a partial cloverleaf interchange with the northbound I-85 onramp being a loop that requires a left turn at an unsignalized intersection.

The existing conditions analyses in Sections 6.1 Safety and Crashes and 6.2 Roadway Operating Conditions, show the nearly one-mile segment with a large number of severe crashes and varying LOS, ranging between D, E, and F around the I-85 ramps. Section 7.1 Safety Improvements at Crash Hotspots identifies SR 109 and South Davis Road as a high-crash intersection and SR 109 as a high-crash corridor. Potential projects include, but are not limited to, access management, dedicated left-turn lanes, and roundabouts. Section 7.2 Improvements to Address Future Roadway Operating Conditions shows that without improvements, the LOS is expected to become majority D and E through the segment by 2035 and E throughout by 2050.

Project C-22 exists to assess a series of coordinated improvements in the I-85 at SR 109 interchange area. Due to the complex interactions of issues in this area, further analysis or scoping will be necessary to determine the best combination and timing of improvements in this area.

Improvements may include, but are not limited to:

(1) Interchange modification to accommodate northbound truck access to I-85 from SR 109/Greenville Road, such as reconfiguring the loop ramp to a direct northbound ramp from SR 109 westbound to I-85 northbound. An interim or alternative improvement to the existing interchange (such as to signalizing the existing northbound entrance ramp intersection and lane reassignment) may be beneficial while a longer-term interchange ramp modification is analyzed.

(2) Evaluation of roundabouts at the I-85 ramps.

(3) Access management improvements along SR 109/Lafayette Parkway east and west of I-85.

Figure 8-6: SR 109 at I-85 Area

### 8.1.3 Truck Traffic Enforcement

Stakeholders observed that truck traffic through downtown areas is a recurring challenge. For example, trucks have been observed to avoid interstate weigh stations by traveling on US 29 instead. Solutions typically focus on engineering, enforcement, and education. Several projects aimed at reducing truck traffic through downtown areas include bypass projects, operational improvements, and improvements to interstate access. Regarding enforcement, House Bill 189, which allows for heavier trucks, also has a provision for local law enforcement to ticket for truck weight violations.<sup>39</sup> While local governments would need to identify resources to do so, the ability to enforce the weight limits may reduce the frequency of trucks using alternatives to the interstate.

### 8.1.4 Studies

Study projects include those identified through the planning analysis that require additional consideration and review before formal projects can be identified. These studies (**Figure 8-7**) range from additional safety audits along major corridors to active mobility assessments aimed to diversify multi-modal options.

Figure 8-7: Identified Studies

## 8.2 Project Impacts on Future Conditions

The future-year build scenarios show how the transportation system is anticipated to operate, in terms of roadway congestion, based on forecasted trips and the completion of roadway projects within each timeframe.

### 8.2.1 2035 Build Scenario

The 2035 build scenario includes the projects listed in **Table 8-3** (in addition to those included in the baseline scenario). The 2035 build scenario LOS results are shown in **Figure 8-8**. The 2035 build projects improve congestion in those areas compared to 2035 baseline, but a few areas remain congested, particularly along I-85, US 27, Upper Big Springs Road, SR 109/Greenville Road, and SR 14/Vernon Street.

Table 8-3: 2035 Build-Scenario Projects

| Project<br>Ref. No. | Facility                       | Extents   | Existing<br>Configuration | Improved<br>Configuration | Source             |
|---------------------|--------------------------------|---|---------------------------|---------------------------|--------------------|
| C-4                 | SR 14/US 29/West<br>Point Road | CR 403/Upper Glass<br>Bridge to Old Vernon<br>Road  | 2 lanes                   | 4 lanes                   | GDOT PI<br>321715- |
| C-5                 | SR 109/Greenville<br>Road      | CR 206/Callaway<br>Church to CR<br>238/Chipley Mountville<br>Road   | 2 lanes                   | 4 lanes                   | GDOT PI<br>0008674 |

Figure 8-8: 2035 Build Scenario LOS

### 8.2.2 2050 Build Scenario

The 2050 build scenario includes the projects listed in **Table 8-4** (in addition to those already included in the baseline and 2035 build scenario). The 2050 build scenario LOS results are shown in **Figure 8-9**. The 2050 Build projects improve congestion in the areas of the projects, especially on I-85 north of I-185, US 27 between I-85 and I-185, and Upper Big Springs Road, compared to the 2035 build scenario. However, the interstates and SR 109/Lafayette Parkway west of I-85 continue to experience congestion. SR 1/US 27 to South Davis Road is improved compared to the 2050 baseline scenario (see **Section 7.2.1 Future Baseline LOS Conditions**). It should be noted that some congestion in future years is always expected in conjunction with robust population and employment growth. Additionally, the travel demand model cannot capture benefits from non-capacity-related projects, such as intersection improvements, access management, or non-fixed route transit.

Figure 8-9: 2050 Build Scenario LOS

Table 8-5 shows the vehicle miles travelled (VMT) and vehicle hours travelled (VHT) under congested and noncongested conditions and the vehicles hours of delay (VHD) for each of the five scenarios for the Troup County www.arcadis.com

Troup County Long-Range Transportation Plan

model. As a result of the programmed projects, the build scenarios show reduced VHT and VHD compared to their baseline counterparts. However, there is an increase in VMT, which is most likely to due to population and employment growth and associated increased use of major roadways, such as expressways and interstates. Overall VMT is projected to increase at a steady rate from 2020 to 2050 due to forecasted growth in population and employment in the region.

|               | VMT       | VHT    | VHT (Free Flow) | VHD    |
|---------------|-----------|--------|-----------------|--------|
| 2020 Baseline | 2,719,000 | 54,900 | 49,700          | 5,200  |
| 2035 Baseline | 3,305,200 | 75,300 | 62,300          | 13,100 |
| 2050 Baseline | 3,702,400 | 90,000 | 70,400          | 19,600 |
| 2035 Build    | 3,307,500 | 74,400 | 62,000          | 12,500 |
| 2050 Build    | 3,769,000 | 84,200 | 70,300          | 14,000 |

## 8.3 Estimated Project Costs

Planning-level cost estimates were developed for the identified projects. For existing GDOT projects that already have a Pl number assigned, the costs shown in GDOT's GeoPI/TPRO database, according to the Preconstruction Status Reports (PSRs), were used. In some cases, the cost estimates on the PSR were older and in need of updating. In such instances, a new planning-level cost estimate was estimated using the same approach as for newly identified projects, as described below.

Cost estimates assumptions were based on Troup County's classification as a rural county (outside of designated MPOs), roadway functional classification, proximity to railroads, and existing sidewalk presence or pedestrian activity. In developing cost estimates for widening projects and new roadways, per-mile estimates were used based on the number of existing and proposed lanes. Cost estimates for intersections and interchanges were calculated at a per-unit rate, based on the project type with an additional per-mile cost for sidewalk and shoulder adjustments for projects other than signal upgrades. Right-of-way (ROW) costs for widening projects also considered the possibility of widening into an existing median.

In developing cost estimates for bicycle and pedestrian projects, Troup County's Thread Trail Plan, adopted in 2016, was referenced. Trail segment details with start and end termini, length, and cost estimates for implementation are outlined in the plan. Some segments of the Thread Trail have been completed or are in the construction phase, so multi-use trail and walkway projects in this transportation plan were assigned cost estimates based on an average of the per-mile cost of each segment covered in the Thread Trail Plan. The average cost was multiplied by the estimated length of the trail segments.

Cost estimates for bridge projects were based on GDOT's Preconstruction Status Report (PSR), which identified existing cost estimates for bridge projects under GDOT's jurisdiction. Bridge projects not in GDOT's purview were assessed using the PSR estimates as a guide.

Freight projects identified on state routes referenced the PSR for similar project types when applicable.

To show project costs in year-of-expenditure (YOE) dollars, an annual growth rate of 2% was applied to the project costs, consistent with the GDOT Office of Financial Management approach to future year cost estimate growth. Since projects are not assigned to a specific year within each implementation timeframe, the median year was assumed for all projects with each tier. For GDOT programmed projects with construction programmed in the next three years, the GDOT cost estimate was used for YOE.

**Figure 8-10** provides a summary of project costs showing the proportion of costs that are for projects in GDOT's current work program as well as projects identified through this planning process. The total cost for all identified projects combined is approximately \$2.4 billion in 2022 dollars. Costs represent the total cost for all phases, including completed phases. Some projects do not have cost estimates, as further scoping is needed, and costs will increase by year of expenditure.

Figure 8-10: Project Cost Summary, 2022 Dollars

### 8.3.1 Benefit-Cost Analysis

A high-level benefit-cost analysis was completed for all applicable roadway capacity projects. The analysis requires several inputs for each project, such as:

- Project type and sub-type
- Location
- Length
- Speed limit
- Bike lanes and sidewalks
- Existing and future annual average daily traffic (AADT)

WWW.arcadis.com Troup County Long-Range Transportation Plan

- Existing and future LOS
- Truck percentage
- Total crashes (fatality crashes, injury crashes, and other crashes)

The benefits were then calculated in terms of travel time savings, safety savings, operating savings, and emissions savings, resulting in an overall number that when compared to the project cost, yields a benefit/cost (B/C) ratio that can be used to compare the anticipated impact of projects. For B/C analysis comparison, all B/C costs are in current-year dollars. The B/C ratio for each capacity project is shown in the project summary sheets in **Appendix A**.

The B/C analysis uses each project's annualized cost, A, calculated by:

$$A = P \times \frac{i}{1 - (1 + i)^{-n}},$$

where *P* is the total cost of all four phases, *n* is the design life, and *i* is the discount rate. A standard discount rate of i = 7% and a design life of n = 30 years were used for all projects. The approach and standard discount rate are consistent with the 2023 Update of USDOT Benefit Cost Analysis Guidelines.<sup>40</sup>

It is important to note that the B/C methodology does not fully capture all the benefits of new roads since they lack an existing AADT, crash data, and other elements, so the benefits of new roadways tend to be underestimated when looking at it at a high level. The same is true for projects on local roads that are not part of the GSTDM.

# 9 **Project Evaluation**

This chapter describes the project evaluation used as informative measures to demonstrate how well projects align with the plan's stated goals. The evaluation uses qualitative and quantitative measures based on each of the plan's goals and objectives as outlined in **Section 2.4 Goals and Objectives**. **Table 9-1** summarizes the goals and the associated evaluation measures and their applicability to each project type.

Table 9-1: Project Evaluation Measures

| Goal   | Objective   | Evaluation Measure  | Capacity | Intersection | Bridge | Bike/Ped | Freight | Railroad | Transit | Study |
|--|---|---|----------|--------------|--------|----------|---------|----------|---------|-------|
| Promote  | Address existing and  | Project reduces congestion or<br>improves bridges on the<br>roadway network   | Y        | Y            | Y      | Y        | N       | Y        | Y       | Y     |
| accessibility  | future traffic congestion   | Project improves freight<br>movement on national or state<br>freight routes   | Y        | Y            | Y      | N        | Y       | Y        | N       | Y     |

Troup County Long-Range Transportation Plan

#### Chapter 9 - Project Evaluation

The chosen evaluation measures provide qualitative and quantitative approaches to understanding the impact the project will provide. The resulting nominal classification (i.e., Low, Medium, High; Yes, No) comes from the analysis performed through Geospatial Information Systems (GIS) or through project understanding and technical expertise. Each measure has a defined threshold for Low, Medium, and High impact, as shown in **Table 9-2**.

#### Table 9-2: Project Evaluation Criteria

| Evaluation Measure   | Criteria   | Qualitative | Quantitative |
|--|--|-------------|--------------|
| Project reduces congestion on the roadway network  | Low- 2050 LOS < D and/or project does not reduce congestion and does not improve<br>bridges; Medium- 2050 LOS <= D and project reduces congestion (based on project type),<br>or project is expected to reduce congestion through mode shift (bike/ped); High- LOS > D<br>and project reduces congestion (based on project type) or improves bridges. Congestion<br>mitigating project types include intersection/interchange improvements, railroad<br>improvements, access management, new roadways, parallel facilities/routes, transit<br>projects, roadway capacity, and similar project types. | x           | x            |
| Project improves freight<br>movement on national or state<br>freight routes                              | No- Project is not located on National Highway Freight Network route or GDOT freight route network; Yes- Project is located on NHFN route or GDOT freight route network.   | х           |              |
| Project improves existing transportation facilities  | No- Project is a new facility or other project that does not improve existing facilities or operations; Yes- Project provides improvements to existing transportation facilities or operations.  | х           |              |
| Project is expected to reduce<br>crashes at an intersection or<br>along a corridor                       | Low- Project not expected to reduce crashes and does not improve bridges; Medium-<br>Project expected to reduce crashes through mode shift; High- Project improves bridges or is<br>expected to reduce crashes. Determination is based on project type. Project types<br>contributing to mode shift include bike/ped/transit. Project types anticipated to reduce<br>crashes include capacity projects, intersection/interchange improvements, access<br>management, addition of turn lanes and other operational improvements, and similar project<br>types.  | x           |              |
| Project includes bicycle,<br>pedestrian, and/or transit<br>improvements in or near an<br>activity center | No- Project does not include or enable bicycle, pedestrian, and/or transit improvements connecting to an activity center; Yes- Project includes or enables bicycle, pedestrian, and/or transit improvements connecting to an activity center. Activity centers are city downtown areas.  | х           | х            |
| Project provides access and<br>connections to existing or<br>planned trails                              | No- Project does not intersect or adjoin to existing or planned trails; Yes- Project intersects<br>or adjoins to existing or planned trails.   | х           | х            |
| Project improves connectivity<br>to key activity centers,<br>including freight-related land<br>uses      | No- Project does not connect to an activity center; Yes- Project connects to an activity center. Activity centers are city downtown areas and within 1 mile of freight land uses. Point location projects considered connecting if within 1/5 mile of an activity center.  | х           | x            |
| Project incorporates green<br>infrastructure or sustainability   | No- Project does not include green infrastructure or sustainability elements; Yes- Project includes green infrastructure or sustainability elements.   | х           |              |
| Project preserves the County's natural areas   | No- Project is adjacent to environmentally sensitive areas Yes- Project is not adjacent to environmentally sensitive areas. Environmentally sensitive areas include parks, historic preservation sites, and national wildlife refuge areas. The analysis considers 1/2 mile as adjacent.   | х           | х            |

#### Chapter 9 - Project Evaluation

| Evaluation Measure                                      | Criteria  | Qualitative | Quantitative |
|---|---|-------------|--------------|
| Project minimizes air quality impacts of transportation | No- Project had no expected air quality improvements; Yes- Project expected to improve air quality. Project types anticipated to improve air quality include bicycle, pedestrian, transit, intersection/interchange improvements, and other operational improvements and similar project types. | x           |              |

The final evaluation does not rank or prioritize the projects, but provides a wholistic context that can be used, along with the project cost, by the County to move projects into their community work plan and into funding and implementation.

The evaluation measures are summarized below by their respective goal and objective.

#### **Promote Connectivity and Accessibility**

To assess the connectivity and accessibility of projects and meet the goal objective of addressing existing and future congestion, projects are evaluated by the impact on congestion, resiliency of bridge infrastructure, and the freight network. Using the Georgia Statewide Travel Demand Model (GSTDM), the evaluation indicates whether the proposed project reduces or maintains congestion. Projects also have a higher impact on this objective if the project is along a National Highway Freight Network or GDOT freight route. The outcome of this evaluation allows for a quick selection of projects that are meant to reduce congestion or improve bridge infrastructure.

#### Maintain and Optimize Use of Existing Infrastructure

Troup County and the associated cities have existing transportation facilities that must be maintained and in a state of good repair to maximize the benefits of previous investments. This measure indicates if a project improves the existing infrastructure or if it is a completely new facility. This evaluation measure aims to provide decisionmakers with the ability to quickly identify improvement projects for state of good repair or new facility projects.

#### Promote Safe and Efficient Movement of People and Goods

This evaluation measure focuses on the outcome of reducing crashes at intersections or along a corridor, as well as maintaining existing infrastructure safety. The purpose and description of the project, based on the project type, are used to evaluate the identified projects. Project types anticipated to reduce crashes include capacity projects, intersection/interchange improvements, access management, the addition of turn lanes and other operational improvements, and similar project types. Bridge projects are evaluated favorably for improving infrastructure safety. This measure identifies projects that are designed to reduce crashes, provide a mode shift, and increase safety, or projects that are not designed for safety.

WWW.arcadis.com Troup County Long-Range Transportation Plan

#### Provide a Range of Mobility Options

This objective is to provide for and increase the usefulness of non-vehicular modes, such as biking, walking, or transit. Associated project types are evaluated to indicate if the project includes or enables additional non-vehicular facilities near or around activity centers and for those that provide an increase in access and connectivity to existing or planned trails.

#### Align Transportation Infrastructure with Current and Future Land Use

It is essential that projects are not only built for the needs of the present day but also for the anticipated future demand within the County. Identified projects were evaluated according to their ability to improve connectivity and accessibility between major travel destinations, populations, employment concentrations, and freight generators. The GIS analysis uses population, employment, freight, and land use data to assess each project's ability to serve surrounding land uses.

#### Promote the Health of People and the Natural Environment

As a state, regional, and county goal, identified projects include an evaluation of the impact on the health and natural environment. This analysis was performed to understand the projects' ability to satisfy the objectives of incorporating green infrastructure, stormwater management, and energy conservation, as well as consideration to the overall social, environmental, and economic impact. The evaluation measures include identifying projects that preserve the County's nature areas and if the project minimizes air quality impacts of transportation.

The following sections outline the evaluation process for each project type.

## 9.1 Capacity Projects

The capacity projects were subject to the most evaluation metrics during the analysis. Due to the nature of capacity projects and their large cost and impact on the project area, their range of impact was evaluated through multiple perspectives. Capacity projects contain linear corridor projects that typically have direct impact on congestion and safety but typically have more negative impacts on the environment. They typically include improvements to the intersections at the project termini and along the length of the project if applicable. The evaluation of capacity projects included:

- A review of the existing and future LOS in the project areas and the expected impact on freight traffic
- Improvements that would increase safety
- Alignment with future land uses and promote access to activity centers
- Opportunities for additional investment that enable multimodal facilities by use of ROW

- Necessary maintenance to existing infrastructure
- The potential to incorporate sustainability elements and the project's impact in environmentally sensitive areas

Investments in multi-modal elements such as sidewalks and bike lanes in roadway capacity and other project types will depend on more specific project scoping and may affect total project costs. Capacity projects located in or near downtown areas or activity and employment centers, including freight-related land uses, would benefit from including bicycle and pedestrian access to ensure that people can reach these areas with or without a personal vehicle.

## 9.2 Intersection Projects

Intersection projects, often, provide improvements to existing facilities that are typically intended to increase operational improvements, capacity, and safety for all vehicle types. These projects are evaluated through the applicable measures that provide an understanding of the magnitude and diversity of impacts that can be addressed if the project is implemented. The evaluation of intersection projects included:

- A review of the existing and future LOS at the intersections
- Improvements that would increase safety
- Alignment with future land uses and promote access to activity centers
- Necessary maintenance to existing infrastructure
- The potential to incorporate sustainability elements and the project's impact in environmentally sensitive areas

## 9.3 Bridge Projects

Bridge projects are state of good repair projects that intend to maintain the existing infrastructure of bridges. New bridges are included in any capacity (widening) or new roadway projects as they are built, where needed. Troup County has several waterways, and the transportation network includes several bridges. The main components used to evaluate bridge projects were:

- Existence along the freight network
- A review of the current bridge condition rating
- Improvements that would increase safety
- The potential to incorporate sustainability elements and project impact in environmentally sensitive areas

The tonnage from freight traffic adds additional wear and tear on street surfaces and bridges. Those within the freight network and identified for rehabilitation need to consider the growth of industrial land uses and freight traffic in the county.

## 9.4 Bicycle & Pedestrian Projects

Multi-modal connectivity provides resiliency within the community to reach destinations through multiple modes of travel and is a high priority for the state of Georgia and Troup County. These projects include additional facilities along existing roadways or new multi-use paths and greenways that can increase connectivity and provide recreational activity. The majority of bike and pedestrian were identified by the recommendations of the Thread Trails Master Plan. This analysis provides additional evaluation by considering:
- Safety improvements for cyclist and pedestrians
- Access and connection to existing facilities and activity centers
- The potential to incorporate sustainability elements and project impact in environmentally sensitive areas

### 9.5 Freight Projects

Freight projects focus on the efficiency of movement of economic goods and materials, and the safety of all roadway users along designated freight routes. Freight projects were evaluated by considering:

- The improvement and efficiency of freight movement
- Improvements that would increase safety
- Alignment with future land uses and promote access to economic centers
- Necessary maintenance to existing infrastructure
- The potential to incorporate sustainability elements and the project's impact in environmentally sensitive areas

### 9.6 Railroad Crossing Projects

Railroad crossing projects have a separate designation within the plan due to their coordination efforts and related increased cost. However, improving railroad crossings can have significant impacts on safety and congestion. Railroad projects were evaluated with the same framework as intersection projects, including:

- A review of the existing and future LOS at the railroad crossings
- Improvements that would increase safety
- Alignment with future land uses and promote access to activity centers
- Necessary maintenance to existing infrastructure

# 9.7 Transit and Study Projects

Transit and study projects include high-level ideas that are intended to improve transit operations, safety, or provide more analysis to implement coordinated pedestrian facilities or traffic signal operations. These recommendations were evaluated based on the project understanding and intent, as they are not all directly associated with a location.

# 9.8 **Project Evaluation Results**

The project evaluation results are listed in **Table 9-3**. The colors indicate the degree to which each project meets each applicable evaluation measure, where orange indicates no/low, yellow indicates medium, and green indicates yes/high. Fields marked as "N/A" (not applicable) mean that project was not scored for those measures.

Table 9-3: Project Evaluation Results

# **10 Environmental Screening**

A desktop environmental screening was performed to determine each project's proximity to natural (e.g., wetlands), cultural (e.g., National Register of Historic Places [NRHP] eligible or listed properties), and social (e.g., community resources) environmental resources using a 500-foot buffer. The purpose of this analysis was to determine the potential complexity of the environmental clearance process for each identified project.

### **10.1 Environmental Conditions Examination**

A total of 15 GIS data sets were compiled from six sources to identify environmentally sensitive resources in Troup County, and more specifically, within the 500-foot boundary of each project. **Table 10-1** lists all data that was compiled, its source, and a description of what the data set represents.

Table 10-1: Data Sources for Environmental Screening

# **10.2 Project Screening**

As discussed above, a 500-foot boundary was established for each of the potential projects and resources were identified within these boundaries utilizing the compiled GIS data for Troup County. **Figure 10-1** and **Figure 10-2** display the results of the environmental screening for projects C-10 (SR 14/South Davis Road from SR 109/Lafayette Parkway to SR 219/Whitesville Road) and C-11 (SR 1/US 27/Martha Berry Highway/Hamilton Road).

#### Chapter 10 - Environmental Screening

Project C-10 proposes to widen SR 14/South Davis Road from SR 109/Lafayette Parkway to SR 219/Whitesville Road from two lanes to four lanes (see **Figure 10-1**). Two childcare facilities, one public school, four places of worship, and one fire station were identified within the 500-foot boundary for this project. The project crosses through multiple U.S. Census Bureau block groups that were identified as having higher low-income populations than Troup County and the State of Georgia as well as two Justice40 Disadvantaged Community U.S. Census Bureau Census tracts. Waters are present throughout the corridor and the existing roadway crosses a Federal Emergency Management Agency (FEMA) Flood Hazard Zone AE Regulatory Floodway in two places. Additionally, the NRHP-listed Fannin--Trutti--Handley Place Historic District and Nutwood property are located within the 500-foot boundary. Based on the project type and length, and presence of several community resources within potential Environmental Justice communities, it is anticipated that an Environmental Assessment would be developed to obtain National Environmental Policy Act (NEPA) clearance. Impacts to field-delineated Waters of the United States would require a Section 404 Permit from the U.S. Army Corps of Engineers and mitigation credits for impacts to streams and/or wetlands may be required. In the event the proposed project impacted the NRHP-listed resources, efforts would be required during the design phase to avoid and/or minimize impacts to these resources.

Figure 10-1: Project C-10 Environmental Screening

Project C-11 proposes to widen SR 1/US 27/Martha Berry Highway/Hamilton Road from I-185 to I-85 from two lanes to four lanes (see **Figure 10-2**). Two law enforcement facilities, two places of worship, and one fire station were identified within the 500-foot boundary for this project. The project crosses through multiple U.S. Census Bureau block groups that were identified as having higher low-income populations than Troup County and the State of

WWW.arcadis.com Troup County Long-Range Transportation Plan Georgia and is located within one Justice40 Disadvantaged Community U.S. Census Bureau Census tract. Waters are present throughout the corridor and the existing roadway crosses a FEMA Flood Hazard Zone AE floodplain. Based on the project type and length, and presence of community resources within potential EJ communities, it is anticipated that an Environmental Assessment would be developed to obtain NEPA clearance. Impacts to field-delineated Waters of the United States would require a Section 404 Permit from the U.S. Army Corps of Engineers and mitigation credits for impacts to streams and/or wetlands may be required.

A list of all identified projects and resources found within their respective 500-foot boundaries can be found in **Appendix D**.

Figure 10-2: Project C-11 Environmental Screening

### **10.3 Potential Disadvantaged Communities Identification**

Of the approximately 97 projects that were screened for environmental resources, 90 of those are within a Justice40 Disadvantaged Community U.S. Census Bureau Census tract and/or a U.S. Census Bureau block group that was identified as having higher low-income populations than Troup County and the State of Georgia. Additional desktop research and windshield surveys would be required for programmed projects located within these Census tracts and/or block groups to identify potential Environmental Justice communities. If Environmental Justice communities are identified within a project area, the decision-making process may include coordination with community leaders, community engagement through public involvement, and an evaluation of the project's potential to impacts to these communities. The evaluation should consider how the communities are affected by changes to access, www.arcadis.com

Troup County Long-Range Transportation Plan

#### Chapter 10 - Environmental Screening

displacements or significant ROW takes, alterations to traffic patterns, increased community isolation, impacts to community cohesion, or other issues of community concern and controversy. Efforts to avoid and minimize impacts to Environmental Justice communities must be considered as part of the NEPA process.

# 11 Funding

This section outlines several funding sources that could be used to design and construct the projects identified in this plan. Troup County has historically received funding from federal, state, and local-level agencies to finance roadway, transit, and active-transportation-related projects. The funding sources can be applied to identified projects as appropriate based on the criteria set for each funding program. The majority of funding for transportation projects in Troup County is from federal funding provided through GDOT, often with a percentage match required from local sources. Many of the projects are eligible for the federal discretionary grants listed in this section, but incorporating aspects that will contribute to environmental benefits and a robust cost benefit analysis into the project plan and application can increase the probability of selection, according to the criteria outlined by many of the grant programs.<sup>41</sup>

### **11.1 Federal Funding Sources**

Federal funding comes primarily from FHWA and Federal Transit Administration (FTA) formula funds, which are apportioned at the state and regional levels. The current federal transportation funding authorization legislation is the Infrastructure Investment and Jobs Act (IIJA), also known as the Bipartisan Infrastructure Law (BIL), which provides funding for federal fiscal years 2022 through 2026. In addition to formula funds, the BIL also includes several discretionary grant programs that applicants such as cities, state DOTs, and MPOs can request through a competitive application process.

### 11.1.1 FHWA Formula Funding

In the current fiscal year (FY 2024), there is over \$54 billion dollars in funding for federal-aid highway programs nationwide, including approximately \$1.8 billion in Georgia. **Table 11-1** shows FY 2024 Federal-Aid Highway Program Apportionments under the BIL for the State of Georgia (before set-asides).<sup>42</sup> The process for determining how much each state is apportioned and how much per program are referenced in the notice for Federal-Aid Highway Program funds<sup>42</sup> The responsibility lies with GDOT, on behalf of FHWA, to distribute allocated funds across congressional districts that will be apportioned to counties within the 14 districts. GDOT will assess the qualifications of local governments to receive funding by determining if they comply with federal regulations as outlined by the Federal-Aid Highway Program.<sup>43</sup>

| Total  | \$1,779,698,048 | \$54,605,083,217 |

Data Source: FHWA, Notice 4510.880, FY 2024

Georgia is set to receive \$45 million for bridge replacement and rehabilitation projects, which includes bridges within the federal-aid highway network and bridges located on other public roads, referred to as 'off-system bridges.'<sup>44</sup> This amount of funding has the potential to cover a portion of the cost for the seven bridge replacement projects identified in this plan, which average \$9.6 million for each project. The apportionment of funds through the Bridge Formula Program (BFP) for Georgia are shown in **Table 11-2** in relation to the national expenditure.<sup>45</sup> This funding is a portion of the Highway Infrastructure Program Funds (HIP) appropriated under the BIL and is available for expenditure until 2032.<sup>44</sup>

Table 11-2: FY 2024 Apportionment of Highway Infrastructure Program Funds for the Bridge Formula Program Pursuant to the Bipartisan Infrastructure Law

| Area               | Georgia      | U.S.            |
|--------------------|--------------|-----------------|
| Bridge (main)      | \$38,250,000 | \$4,511,374,999 |
| Off-System Bridges | \$6,750,000  | \$796,125,001   |

#### Chapter 11 – Funding

| Area  | Georgia      | U.S.            |
|-------|--------------|-----------------|
| Total | \$45,000,000 | \$5,307,500,000 |

Data Source: FHWA, FY 2024

The Bridge Replacement and Rehabilitation Program provides funding apart from the BFP apportioned by the HIP, as this is not limited to bridges located on federal-aid highways and focuses on the condition of the bridges in each state. States that have more than 5% of bridges in poor condition qualify to receive priority funding that may be greater than \$6 million.<sup>46</sup> After apportionment for qualifying states, non-qualifying states may receive approximately \$6 million for bridge replacement and rehabilitation projects. Georgia is classified as a non-qualifying state and is apportioned \$8.5 million along with all other non-qualifying states (**Table 11-3**).

Table 11-3: FY 2023 Apportionment of Highway Infrastructure Program Funds for the Bridge Replacement and Rehabilitation Program

| Area   | Georgia      | U.S.            |
|--|--------------|-----------------|
| Bridge Replacement and<br>Rehabilitation (Non-Qualifying<br>State) | \$8,485,348  | \$1,145,000,000 |
| Appalachian Development<br>Highway System                          | \$3,422,578  | \$100,000,000   |
| Total  | \$11,907,926 | \$1,245,000,000 |

Data Source: FHWA, Notice 4510.878, FY 2024

The State of Georgia is set to receive approximately \$20 million from the NHPP funding program for FY 2024. The amount shown in **Table 11-4** is funding to be received post-sequestration, which is a reduction due to budgetary constraints as established in the Balanced Budget and Emergency Deficit Control Act.<sup>47</sup>

Table 11-4: FY 2024 Sequestration of National Highway Performance Program (NHPP) Funds

| Area                    | Georgia    | U.S.        |
|-------------------------|------------|-------------|
| Post-Sequestration NHPP | 19,797,822 | 602,577,000 |

#### Chapter 11 – Funding

Additional funding has been allocated for redistribution from the Federal-Aid Highway programs funding of FY 2023, as shown in **Table 11-5**.<sup>48</sup> The additional funding is sourced from authorized apportioned Federal-Aid Highway program funds that could not be apportioned in FY 2023 due to any obligation limitation (ceiling for how much funds can be committed to be distributed in advance of appropriation of funds) that is in place.<sup>48,49</sup> This funding is available for use until September 30, 2026.

Table 11-5: FY 2023 Redistribution of Certain Authorized Funds Under the Department of Transportation Appropriations Act

| Area             | Georgia    | U.S.        |
|------------------|------------|-------------|
| Authorized Funds | 18,850,905 | 578,443,980 |

Data Source: FHWA, 4510.877, FY 2023

The National Electric Vehicle Infrastructure (NEVI) formula program can be used to advance electric vehicle charging infrastructure and enhance reliability of electric vehicle usage.<sup>50</sup> This formula program cannot be used for any other type of highway formula programs, and FHWA has set aside a portion of these funds for states and localities that require additional financial assistance for expanding their electric vehicle infrastructure, which is shown in **Table 11-6**.<sup>50</sup> GDOT developed a NEVI plan in 2023 that outlines Georgia's plans for investing funds received through the NEVI program. The state identifies the importance of developing public-private partnerships to achieve their primary goal of building out Alternative Fuel Corridors (AFCs) to meet NEVI charging infrastructure standards. While the federal funding allocated for the NEVI formula program will be used to complete this project, additional funding is required for operation and maintenance. Georgia plans to partner with private entities to operate and maintain charging stations that are to be installed and will need to receive a funding match of 20% from partners to have enough funding to implement this plan.

Table 11-6: FY 2024 Apportionment of Highway Infrastructure Program Funds for the National Electric Vehicle Infrastructure Formula Program Pursuant to the Bipartisan Infrastructure Law

| Area                                 | Georgia      | U.S.          |

### 11.1.2 FTA Transit Funding

Troup Transit receives funding from the FTA Formula Grants for Rural Areas (5311) program. The system also receives a smaller portion of its funding from fare revenues. In 2021, 98.8% of the agency's \$374,083 in funding was from federal assistance.<sup>51</sup>

### 11.1.3 Federal Discretionary Grant Funding

Under the BIL, the USDOT, FHWA, and Federal Transit Administration (FTA) have a host of discretionary and competitive grants that applicants such as state DOTs, MPOs, local governments or agencies, and federally-recognized tribes can apply for on a yearly basis.<sup>52</sup> The following is a list of the more relevant potential grants, in addition to the IIJA formula-fund programs, that can be pursued as applicable to the projects:

• Rebuilding American Infrastructure for Sustainability and Equity (RAISE)

The RAISE grant program was designed to provide funding for local and regional transportation projects that contribute to a significant sustainable and equitable impact on communities. This grant provides \$2.2 billion in FY 2023 to be apportioned to select recipients, which can be used for capital projects and planning projects as detailed in the application. <sup>53,54</sup>

• Nationally Significant Multimodal Freight & Highway Projects Program (INFRA)

The INFRA grant awards selected applicants with funding allocated primarily for highway and multimodal freight projects that contribute to safety and reliability and will have a high impact in the region.<sup>55</sup>

Bridge Investment Program (BIP)

The BIP provides funding in addition to the Bridge Formula Program, that is primarily to be used for largescale bridge projects. This funding program allocates \$9.62 billion to be awarded from FY 2023 to FY 2026. Within the BIP, projects are classified on the cost bracket, with large bridge projects anticipated to cost greater than \$100 million and a minimum grant award of \$50 million for all projects.<sup>56</sup>

• Safe Streets and Roads for All (SSR4A)

The SSR4A (amended from the former Safe Streets for All) program provides funding for projects that work towards the 'vision zero' goal of zero roadway deaths and injuries. This program provides two types of grants that can be used either for developing a safety action plan or implementing projects enhancing safety. The \$5 billion in funds are to be apportioned over a 5-year period from 2022 to 2026 for selected projects.<sup>57</sup>

• Reconnecting Communities Pilot (RCP)

Reconnecting communities is a \$1 billion over 5-years pilot program that is designed to have two types of grants which include funding for planning projects and feasibility studies, as well as capital construction. This program primarily works to retrofit and work with existing infrastructure to enhance community connectivity and increase opportunities for mobility and accessibility.

<sup>&</sup>lt;sup>57</sup> USDOT, SS4A, <u>https://www.transportation.gov/grants/SS4A</u>

Promoting Resilient Operations for Transformative, Efficient, and Cost-Saving Transportation (PROTECT)
The PROTECT program has funding appropriated for a formula funding approach and a discretionary grant.
The discretionary grant targets funding towards projects that can address areas vulnerable to natural
disasters and climate events in the form of planning grants, capital improvements, and evacuation routes.<sup>58</sup>

# 11.2 State Funding Sources

GDOT facilitates the allocation of funding received from most federal funding programs and is responsible for statewide distribution to all congressional districts for use in federal, state, and local level projects. In addition to distributing federal funds, GDOT has implemented its own funding programs that either apportion funding to all local governments within the 14 congressional districts based on predetermined criterion, or provide discretionary and competitive grant funding to select projects. The predetermined funding plan is outlined in the STIP document that is updated every 4 years. The FY 2024 – 2027 STIP indicates that there is \$1.6 billion in state funds allocated for state highway projects, of which \$1.35 billion is put towards federal matching. There are several sources of state funding, including the motor fuels state tax and special diesel fuel tax. The fuel taxes can only be used for roadway and bridge projects, so other project types can be financed through other sources and funding programs.<sup>59</sup>

### **11.2.1** Local Maintenance & Improvement Grant (LMIG)

GDOT provides funding to local municipalities (cities and counties) for maintenance, repair, and low-impact projects that do not require a significant alteration to the roadway network through the Local Maintenance & Improvement Grant (LMIG) program. This program allows minor projects to be funded and completed more quickly than large-scale projects. The LMIG receives funding from the state motor fuel tax. Guidelines for applying to this grant include a matching of 10 to 30% of expenses, the project should be completed within 1-3 years, and guidelines outlined by the American Association of State Highway and Transportation Officials (AASHTO) and Manual on Uniform Traffic Control Devices (MUTCD) should be adhered to.<sup>60</sup> LMIG formula funding for Troup County in state FY 2022-2024 is shown in **Table 11-7**.<sup>61</sup>

| GDOT<br>District | County | City             | Total<br>Mileage | Population | 2022<br>LMIG<br>Formula<br>Amount | 2023<br>LMIG<br>Formula<br>Amount | 2024<br>LMIG<br>Formula<br>Amount | Require<br>d LMIG<br>Match |

Troup County Long-Range Transportation Plan

### 11.2.2 STIP Lump Sum Programs

In addition to the initial STIP allocation, there is a Lump Sum project program that specifically sets aside funds for smaller-scale projects that do not have a significant impact on the roadway network or capacity.<sup>62</sup> These funds are categorized into nine groups:

- 1. Transportation Alternative Program (TAP) intended for transportation alternative projects including pedestrian and bicycle facilities, and public transportation (*federal funds, locally administered*)
- 2. Maintenance bridge and roadway maintenance projects (rehabilitation, resurfacing, pavement markings, signage, and other improvements)
- 3. Lighting specific to upgrading lighting systems and light repairs
- 4. Rights of Way Protective Buying and Hardship Acquisitions for acquiring right-of-way (ROW) for future projects
- 5. Safety railroad and safety projects (eliminating hazards, upgrading warning systems, widening, guardrails and other safety measures)
- 6. Operations operational improvements and signal upgrades (installing turn lanes, ramps, interchanges, and signal operation improvements and maintenance)
- 7. Low impact bridges specific to bridge projects that do not have high environmental, utility, or travel pattern impacts
- 8. Freight operations improving all facilities that are used for freight and ensuring safety on truck routes
- 9. Rural development improving broadband, transportation, ITS, and safety infrastructure in rural areas

### 11.2.3 State Transit Funding

GDOT also provides funding for transit through the Transit Trust Fund Program (TTFP) which can be used for any transit related project that will help support or expand the network.<sup>63</sup> For FY 2024, each county transit agency or rural sub-recipient has been allocated funds to support their local transit services, and Troup County is set to receive \$93,260 through this funding program to distribute to local transit services.<sup>64</sup>

### **11.3 Local Funding Sources**

Cities and counties fund projects from a variety of sources, but the primary locally generated sources or "own source" funds come from sources such as property and sales tax revenues. The Special Purpose Local Option Sales Tax (SPLOST) is a primary local funding source for transportation projects. SPLOSTs are a funding mechanism that collects a temporary, voter-approved sales tax of 1% that is collected during sales to collect funding for capital projects.<sup>65</sup> Troup County's current SPLOST (SPLOST V) is for the six-year period beginning January 1, 2019 through 2024 and is expected to generate approximately \$70 million dollars. According to Troup County's Annual Comprehensive Financial Report for the end of FY 2022, approximately \$8 million from SPLOST V County-Wide and \$4 million from SPLOST V County-Specific were calculated as revenue to fund capital projects. The expenditures from this funding source include bridges, roadways, parks and recreation facilities, safety, and sustainability projects. SPLOST funding for county projects includes \$19 million for roads and bridges. Troup County SPLOST funds are an essential source of locally controlled funding for transportation projects and can provide the required local match to state and federal funds and to leverage those larger funding sources, advancing projects more quickly. Troup County also has two Tax Allocation Districts (TADs) – the Gateway TAD and the Mill Creek

<sup>63</sup> GDOT, Transit Trust Fund Program, <u>https://www.dot.ga.gov/GDOT/Pages/TTFP.aspx</u>

TAD that generate revenue for those areas.<sup>66</sup>Local transit projects are primarily funded through passenger fare revenue that is tracked yearly in the National Transit Database (NTD).<sup>67</sup> In 2022, Troup County had collected \$8,443 in total through passenger fares, which is a minimal contribution for transit improvement projects.<sup>68</sup>

# **12 Conclusions**

The *Troup County Long-Range Transportation Plan* serves as the Long-Range Transportation Plan for Troup County, including the cities of Hogansville, LaGrange, and West Point. Transportation improvement projects were reviewed based on the goals and objectives as identified by the plan's interested parties and in alignment with Georgia's Statewide Strategic Transportation Plan. The *Troup County Long-Range Transportation Plan* identified the existing conditions, future conditions, and potential projects for the transportation network.

The identified projects included in this plan were chosen with the intent of improving the multimodal transportation network including highways, local roads, bridges, bicycle and pedestrian improvements, freight, transit, and railways. An evaluation of the identified projects was provided to give understanding to the impacts, benefits, and costs associated with projects. The project impacts include the expected effects on congestion, safety, the environment, and disadvantaged community groups. The plan also includes a high-level timeline for project implementation.

The planning process included coordination among Troup County, the cities of LaGrange, Hogansville, and West Point, the Georgia Department of Transportation (GDOT), a stakeholder Advisory Committee, and a consulting team comprised of Arcadis and Modern Mobility Partners. This collaboration ensured necessary interested groups had the opportunity to provide input in developing and evaluating planned improvements to the transportation network.

This document should serve as the foundation for Troup County's transportation planning efforts and a starting point for addressing transportation opportunities. It should be reviewed and updated periodically to incorporate the latest data and to ensure that the plan's assumptions and projects effectively address the county's transportation opportunities.

## **1** Report Purpose

The purpose of this Travel Demand Model Methodology Technical Report is to analyze the current (2020) and future (2035 and 2050) traffic conditions including contributing factors such as population, employment, households, as well as traffic conditions including travel time index, level of service (LOS), and system performance measures. As part of the *Troup County Long-Range Transportation Plan*, the travel demand models support forecasting the future traffic performance under different scenarios.

## 2 Travel Demand Model Methodology

## 2.1 Base Year Model Update

The Troup County model was based on the existing 2015 GSTDM, which was developed using the 2015 socioeconomic conditions and transportation network. The GSTDM includes all of Georgia and the other states in the Continental United States (US). Troup County planning team decided to use this model since the scale of the model can provide traffic, especially truck origin and destination information between Troup County and other surrounding counties within and outside of Georgia.

It is necessary to update the models to a base year of 2020 pre-COVID condition, including the socioeconomic conditions, which includes population and employment, and the transportation network within the study area with additional details. The updates include:

- The model network was updated to include all road segments with functional class (FC) Minor Collectors or above for greater detail in Troup County.
- The model network was updated to include road projects that were constructed prior to 2020.
- The model network functional class and number of lanes were updated based on GDOT 2020 road inventory data.
- The model network links with traffic counts available were updated using GDOT TADA 2019 data<sup>1</sup> within Troup County.
- Traffic Analysis Zones (TAZs) within Troup County were aligned with the 2020 GSTDM TAZ boundaries in Troup County to ensure smoother loading of the 2020 SE data. Additionally, the TAZs were split to provide greater detail for traffic loading during the trip generation process where necessary.
- The population data was updated using the latest 2020 Census block level data for TAZs within Georgia. At the time when the Troup County model was under development, the GDOT travel demand model team was also developing 2020 socioeconomic data for their statewide model updating purposes; therefore, for areas outside of Georgia, the same datasets obtained from the GDOT travel demand model team were used to replace the 2015 data.
- The employment data was updated using ESRI 2019 block level data that was purchased by GDOT for TAZs within Georgia and using 2020 socioeconomic data obtained from GDOT for TAZs outside of Georgia.

<sup>&</sup>lt;sup>1</sup> Georgia Department of Transportation. (2019). Traffic Analysis and Data Application. <u>https://www.dot.ga.gov/GDOT/Pages/RoadTrafficData.aspx</u>

Once the model input data was updated to a 2020 base year, the model was validated against the collected traffic counts on major roadway segments. The calibration process was conducted to the base year model to meet the modeling standards that are required by federal or GDOT modeling guidelines. Then the next step is to develop the future year models to support the Troup County future condition analysis.

## 2.2 Future Year Model Development

The Troup County future year models include two forecast years, 2035 as the interim year and 2050 as the planning horizon year, and four future scenarios, 2035 Baseline (or "No Build") and Build and 2050 Baseline and Build. Corresponding socioeconomic data and transportation networks for 2035 and 2050 were developed during the future year model development.

Similar to the base year model inputs preparation, the following inputs were used for the two future year baseline scenarios:

- Socioeconomic data
  - The GDOT GSTDM model included 2050 future year socioeconomic data, which was used to develop the Troup County 2050 socioeconomic inputs.
  - Annual growth rates for each TAZ were calculated using the 2020 and 2050 socioeconomic data from GDOT GSTDM, and then the annual growth rates were used to calculate the 2035 socioeconomic data for each TAZ.
  - The annual growth rates were checked for reasonableness against forecast data from REMI for employment and Georgia Governor's Office of Planning and Budget for population.
  - Additional employment, population, and housing units were attached to the TAZs where the future 2035/2050 developments are planned, respectively. The additional employment data was either provided by Developments of Regional Impact (DRI) information directly provided by the local government with assistance from the developers or estimated based on the development size by using industrial standardized conversion factors.
- Future baseline input network: Based on the 2020 base year input network, these projects were coded additionally in the future baseline input network for both 2035 and 2050:
  - o Roadway capacity projects that were either completed or under construction since 2020, and,
  - Roadway capacity projects with construction phase programmed by FY 2027, according to GeoPI/TPRO.
- Special generator: Special generators are facilities that have different trip generation characteristics from
  other facilities in the travel demand model. In this plan, the West Central Inland Port was treated as a special
  generator, and trip adjustments were made to the TAZs where the inland port will be located to make sure
  the trips being generated from this facility in the future travel demand model will match with the trip estimates
  provided by Georgia Ports Authority.

Once the 2035 and 2050 future baseline travel demand model inputs were prepared, these two models were run and model outputs were used to determine the performance measures.

#### **2.2.1** Developments of Regional Impact and Other Planned Developments

Developments of Regional Impacts (DRIs) are defined as large-scale developments that are likely to have regional effects beyond the local government jurisdiction. The scale of impact for DRI projects was determined based on estimates from email communication from the different stakeholders listed below.

- City of West Point provided details on their DRIs (6/27/23)
- City of LaGrange provided details on DRIs and other entitled developments (6/15/23)
- City of Hogansville provided details on their DRIs (6/23/23)

Additionally, LaGrange provided information on other entitled developments that are likely to be built. Only the development projects that have reached a level of certainty to build were incorporated based on knowledge from the local governments.

DRIs are broken down into five categories retail, manufacturing, warehouse, office, and residential. The conversion factors for each category broken down to employment and/or population per square foot are listed below in **Table 2-1**.

| Туре                     | Convert Factor | Unit                  | Source  |
|--------------------------|----------------|-----------------------|---|
| Retail                   | 1450           | Employment / Sq. Ft.  | Energy Information<br>Association (EIA) <sup>2</sup>              |
| Manufacturing            | 4000           | Employment / Sq. Ft.  | Current Employment<br>Statistics (CES) <sup>3</sup><br>assumption |
| Warehouse                | 18000          | Employment / Sq. Ft.  | CES assumption  |
| Office                   | 600            | Employment / Sq. Ft.  | EIA   |
| Residential              | 2.7            | Population / Unit     | Census  |
| Housing Occupancy Factor | .591           | % Households Occupied | Census  |

Table 2-1: DRI Conversion Factors

The total numbers for additional employment and population are added to their respective TAZs to be incorporated into the final model run. **Table 2-2** shows the additional jobs, households, and population from each DRI and their contributions to their respective TAZs.

### 2.2.2 2035/2050 Baseline Model

The 2035/2050 baseline model incorporates all road capacity and interchange projects with construction planned by FY 2027, according to GeoPI/TPRO. Projects with CST beyond 2027 are screened out.

A list of future baseline projects, included in GeoPI/TPRO with CST in or before 2027, is shown below in Table 2-3:

\*Program years were provided by GDOT Planning and verified as up-to-date as of 12/29/23.

#### 2.2.3 2035/2050 Build Model

A list of projects was curated between the stakeholders of the projects to be coded into the 2035 build and 2050 build model based on LOS improvements to road networks that justified it. In general, these areas are road segments that are exhibiting LOS E or worse. Some LOS D roads were also considered for capacity improvement projects on a case-to-case basis. Additionally, other improvements were suggested by local governments and stakeholders. The list of capacity projects are divided into two categories, short term projects (that could be done by 2035) shown in **Table 2-4** and mid-term projects (that could be done by 2050) shown in **Table 2-5**. Short-term projects are included in the 2035 build scenario and the 2050 build scenarios. While Mid-term projects are only included in the 2050 build scenario.

#### 2.3 Validation and Calibration Statistics for Troup County

Traffic assignment reasonableness was reviewed to ensure the validation of traffic assignments with available count locations within Troup County. Year 2020 daily traffic volumes from the GSTDM model were compared to observed 2019 daily traffic counts from the GDOT Traffic Analysis & Data Application (TADA) on a link-by-link basis for available roadways within the county. The difference between the modeled and observed traffic for each link contributes directly to the overall measure of validation. The 2019 traffic counts are used to calibrate the model to reflect pre-pandemic conditions. For areas with greater discrepancies between the 2020 modeled traffic volumes and 2019 traffic counts, the historical traffic counts from TADA were reviewed to ensure there is no irregular trend or error in the 2019 counts. For each individual roadway link in which observed traffic count data were available, the actual deviation between the modeled and observed traffic and maximum desirable deviation were calculated. The following equation, per GDOT's Georgia Statewide Travel Demand Model Report,<sup>4</sup> was used to estimate the maximum desirable deviation:

Maximum Desirable Deviation 
$$(in \%)_{links} = \pm 38.262 * \left(\frac{AADT_{Two-Way}}{10,000}\right)^{-0.4361}$$

<sup>&</sup>lt;sup>4</sup> 2015/2050 Georgia Statewide Travel Demand Report. GDOT Office of Planning prepared by HNTB. September 2019, <u>https://www.dot.ga.gov/InvestSmart/TravelDemandModels/Development%20of%20Statewide%20Model.pdf</u> www.arcadis.com

**Figure 2-1** shows the maximum desirable deviation, represented by a green curve (positive deviation) and a red curve (negative deviation), along with the volume deviation for the roadways within the county, which serves as the validation study area.

Figure 2-1: Validation Statistics of GSTDM 2020 within Troup County

Traditional measures, recommended in the Federal Highway Administration (FHWA) *Travel Model Improvement Program (TMIP) Model Validation and Reasonableness Checking Manual*, such as coefficient of determination (R<sup>2</sup>) and percent RMSE (%RMSE), is used to provide a scalable measurement of model accuracy.

Correlation coefficient (R) is a standard statistical measure, calculated using the equation below. The coefficient of determination ( $R^2$ ) is the square of the correlation coefficient R:

$$R = \frac{N\sum_{i}V_{i}C_{i} - \sum_{i}V_{i}\sum_{i}C_{i}}{\sqrt{(N\sum_{i}C_{i}^{2} - \sum_{i}C_{i}\sum_{i}C_{i})(N\sum_{i}V_{i}^{2} - \sum_{i}V_{i}\sum_{i}V_{i})}}$$

Where,

C<sub>i</sub> = The observed traffic count for link i;

WWW.arcadis.com Troup County Long-Range Transportation Plan V<sub>i</sub> = The modeled traffic volume for link i;

N = The number of links in the group of links including link i.

Achieving an R<sup>2</sup> of 0.88 has been suggested by FHWA's *TMIP Model Validation and Reasonableness Checking Manual* as a standard for determining a model's validity. **Figure 2-2** shows the variation of modeled volumes with counts. The R-squared value is 0.94, indicating that the GSTDM replicates the observed counts well at the system level within the study area.

Figure 2-2: 2020 Modeled Volumes vs 2019 Traffic Counts

In addition to the R-squared value, %RMSE for roadway links for which observed traffic counts were available was calculated using the following formula:

$$\% RMSE = \frac{\sqrt{\sum_{i} \frac{(V_{i} - C_{i})^{2}}{(N - 1)}}}{\frac{\sum_{i} C_{i}}{N}} * 100$$

Where C<sub>i</sub>, V<sub>i</sub>, and N are as defined for the calculation of R-squared value.

www.arcadis.com Troup County Long-Range Transportation Plan **Table 2-6** indicates the %RMSE by count group for all roadway links with observed counts within the validation study area. All count groups and total counts are within the target %RMSE established by GDOT.

| Count Group     | GDOT Target %RMSE | Count Locations | %RMSE |
|-----------------|-------------------|-----------------|-------|
| 0 - 5,000       | <100%             | 65              | 64%   |
| 5,000 - 10,000  | <75%              | 54              | 47%   |
| 10,000 - 15,000 | <50%              | 22              | 26%   |
| 15,000 - 20,000 | <30%              | 9               | 22%   |
| 20,000 - 30,000 | <30%              | 7               | 14%   |
| > 30,000        | <30%              | 7               | 11%   |
| All Counts      | < 35%             | 164             | 33%   |

Table 2-6: % Root Mean Square Error (RMSE) for Troup County by Count Group

It was determined that the model developed for the *Troup County Long-Range Transportation Plan* achieves the traffic assignment reasonableness check. The future year (2050) model from the same plan is used for Future Existing (E) plus Committed (C) Projects, by modifying the network to reflect programmed projects accordingly.

## **1** Introduction

This appendix presents the current Federal Highway Administration (FHWA) and Federal Transit Authority (FTA) Planning Emphasis Areas and describes how the *Troup County Long-Range Transportation Plan* addresses them, as applicable.

## 2 FHWA Planning Emphasis Areas

On December 30, 2021, FHWA and the Federal Transit Authority (FTA) issued their updated Planning Emphasis Areas (PEAs). The agencies state that "the PEAs are areas that FHWA and FTA field offices should emphasize when meeting with the metropolitan planning organizations, State departments of transportation, Public Transportation Agencies, and Federal Land Management Agency counterparts to identify and develop tasks associated with the Unified Planning Work Program and the Statewide Planning and Research Program." PEAs are intended to provide clarity regarding existing requirements and are non-binding. The updated 2021 PEAs are:<sup>1</sup>

- Tackling the Climate Crisis Transition to a Cleaner Energy, Resilient Future
- Equity and Justice40 in Transportation Planning
- Complete Streets
- Public Involvement
- Strategic Highway Network (STRAHNET)/U.S. Department of Defense (DOD) Coordination
- Federal Land Management Agency (FLMA) Coordination
- Planning and Environment Linkages (PEL)
- Data in Transportation Planning

Several of these areas are addressed in the *Troup County Long-Range Transportation Plan*, as described in the following sections.

#### 2.1.1 Tackling the Climate Crisis – Transition to a Cleaner Energy, Resilient Future

This PEA is related to the FHWA and FTA directive for state DOTs, MPOs, and providers of public transportation to ensure that transportation plans and infrastructure investments work towards the national greenhouse gas reduction goals of 50-52 percent below 2005 levels by 2030, and net-zero emissions by 2050, and increase resilience to extreme weather events.

The *Troup County Long-Range Transportation Plan* includes project recommendations that promote low- or nocarbon emissions modes like public transportation, walking, and biking. While the project recommendations also include roadway widening projects that can be expected to result in increased vehicle miles traveled and increased emissions in the long term, those projects can have short-term emission benefits due to reduced congestion in the near term. The project list includes a diverse mix of widening and other types of projects aimed at reducing congestion and providing for multiple modes of transportation.

<sup>&</sup>lt;sup>1</sup> FHWA/FTA 2021 Updated Planning Emphasis Areas, <u>https://www.transit.dot.gov/sites/fta.dot.gov/files/2022-01/Planning-Emphasis-Areas-12-30-2021.pdf</u>

#### 2.1.2 Equity and Justice40 in Transportation Planning

FHWA and FTA regional offices aim to work with state DOTs and MPOs to advance racial equity and support for underserved and disadvantaged communities. As described in the *Troup County Long-Range Transportation Plan* **Section 3.4.1 Justice40**, FHWA has defined specific geographic areas that meet the threshold for Transportation-Disadvantaged Communities. These locations were mapped as part of the plan's existing conditions analysis and potential impacted were considered during the project identification and evaluation processes, including the environmental screening process detailed in **Chapter 10 Environmental Screening**.

#### 2.1.3 Complete Streets

This PEA is focused on safety for all road users and transportation infrastructure, particularly non-automobile transportation modes. It describes complete streets as roads with safe pedestrian facilities, transit stops, and crossing opportunities at sufficiently frequent intervals to allow for accessing destinations on both sides.

This plan's recommendations include a mix of project types with several bicycle/pedestrian/multiuse trail projects that aim to improve safety and access for non-motorized forms of transportation. Additionally, the plan includes recommendations for transit improvements to promote improved access and experience for users of public transportation. All GDOT projects would also be subject GDOT Complete Streets policy.<sup>2</sup>

# 2.1.4 Strategic Highway Network (STRAHNET)/U.S. Department of Defense (DOD) Coordination

FHWA and FTA encourage planning and project programming processes to consider the connectivity needs for Strategic Highway Network (STRAHNET) routes.

The STRAHNET routes within Troup County are I-85 and I-185. Connectivity to and along these interstate facilities were foundational considerations throughout the planning process, as access to the interstates is essential for the movement of people and goods to, from, and within Troup County. Due to the substantial and growing role of freight in the area, safe and reliable interstate access is a key consideration in the plan's project identification and evaluation processes. Ultimately, the project recommendations include multiple projects on and connecting to the interstates.

#### 2.1.5 Planning and Environment Linkages (PEL)

Planning and Environment Linkages (PEL) refers to the processes of considering environmental, community, and economic goals early in the transportation planning process with the goal of serving communities' transportation needs more effectively and avoiding negative impacts on people and natural resources.

This plan included a detailed environmental screening analysis to identify potential impacts on specific natural and historic resources as well as on communities and disadvantaged communities. This analysis resulted in findings related to anticipated environmental documentation and associated impacts on project implementation timeframes and costs. This led to a more feasible and realistic project list.

<sup>&</sup>lt;sup>2</sup> GDOT Complete Streets, <u>https://www.dot.ga.gov/PartnerSmart/Public/Viewpoint/CompleteStreets.pdf</u> www.arcadis.com

#### 2.1.6 Data in Transportation Planning

This PEA is about encouraging data sharing within the transportation planning process to promote efficient use of resources and improved policy and decision-making.

This plan used a wide range of data sources including many from GDOT's public and internal databases such as GeoPI (GDOT project database), Numetric (crash data), TADA (traffic counts), and the GSTDM (travel demand model). Local data was provided by the county and cities to support the plan's analysis. For example, cities and the county provided detailed information about their upcoming developments and growth projections to tailor the GSTDM future population and employment forecasts to Troup County, thereby improving the future traffic projections.

|--|

## **1** Environmental Screening Results Summary

A desktop environmental screening was performed to determine each project's proximity to natural (e.g., wetlands), cultural (e.g., National Register of Historic Places [NRHP] eligible or listed properties), and social (e.g., community resources) environmental resources using a 500-foot buffer. A total of 15 GIS data sets were compiled from six sources to identify environmentally sensitive resources in Troup County, and more specifically, within the 500-foot boundary of each project. Provided below is an environmental screening table split into six sections, one for each project type: Roadway Capacity, Interchanges & New Roadways; Intersection & Corridor Safety Projects; Freight Improvements; Bridge Improvements; Bicycle & Pedestrian improvements; and Railroad Crossing Improvements. The table (**Table 1-1**) includes nine columns. Parks, water resources, FEMA Flood Zones, and Justice40/Environmental Justice resources are indicated by present or not present within the project area. Community resources and NRHP resources are listed individually, and the anticipated NEPA document and potential costs associated with environmental activities are included for feasibility and budget purposes.

#### Table 1-1: Environmental Screening Results

| Project<br>ID # | Parks   | Water<br>Resources | Community Resources   | NRHP Resources   | FEMA Flood Zones | Justice40 and<br>Environmental Justice | Anticipated NEPA Document      | Additional Costs Associated with<br>Environmental Activities |  |  |  |

- Modern Mobility Partners
  - Kirsten Mote, Principal-In-Charge
- Arcadis
  - Jaap Tigelaar, Project Manager
  - o Otto Clemente, Principal-In-Charge

#### Agenda & Notes:

- 1. Introductions
- 2. Modern Mobility Partners gave a presentation with opportunities for interactive polling feedback via the polling tool Mentimeter, which allows participants to enter responses on a smart phone or computer. Below is the general sequence of slides and the verbal input provided during the meeting.
  - Study Purpose
  - Schedule
  - Existing Conditions: Demographics
    - Population Historically, Troup County's population growth rate was lower than the statewide growth rate, but there has been substantial recent growth, and future population growth in the county is forecast to be closer to the statewide growth forecast.
    - Employment There are several major employers that provide large numbers of jobs, particularly in manufacturing, which accounts for the largest share of jobs in the county (30 percent).
  - Existing Conditions: Transportation System
    - Roadway Operating Conditions Traffic Congestion
      - Mentimeter poll question: Are there particular areas of congestion we should know about that were not identified on the map?
        - o Input recorded in the Mentimeter application.
          - 24 comments were provided and are included in the attached Mentimeter poll results summary. Locations mentioned multiple times include West Point Rd/Pegasus Pkwy/Jefferson St (PM peak), Davis Rd, Vernon Rd, I-85 @ SR 54.
        - Additional (verbal) input, separate from Mentimeter: Portion of Highway 29 between W Lukken Industrial Dr. and Glass Bridge Rd. (shown in Yellow) usually gets more congested than appears on the map.
    - Safety & Crash Summary
      - Crash locations correlate with vehicles volumes, with the highest number of crashes in and around LaGrange.
    - Freight

- Truck trip volumes and freight tonnage are highest on I-85, I-185, and US 27.
- Statewide, Troup is among the top 20 counties for combined origin and destination of manufacturing tonnage.
- Public Transportation
  - Only 0.1% of commute in the county is via public transit. What might be the reason for that? Is there much demand?
    - Currently, the service prioritizes elderly and disabled patrons.
    - Additional need is there, mostly on the employment (people using the public transit for work) side.
    - Troup County Transit has not been able to capture that yet. There is a need for more vehicles and reliable employees to do so.
    - Drivers are retiring and the numbers of available drivers are dwindling.
  - Encourage discussion about working with private companies to provide coverage.
  - Team to refer to Countywide Transit Plan by the Regional Commission for more information.
- 3. Draft Plan Goals & Objectives
  - The previous (2006) Troup County plan's goals and objectives were presented, and feedback was sought via polling.
    - Most respondents indicated that the goals related to connectivity and accessibility, optimizing the use of existing infrastructure, providing connection between land use and transportation, and enhancing quality of life were still highly relevant. Accommodating modes besides automobiles was seen as still relevant, but less relevant than the other goals. The responses to the draft objectives were similar, with most being still relevant, but providing for non-vehicular modes was less relevant than others.
  - The final poll questions were:
    - What is currently SUCESSFUL in terms of transportation in Troup County?
      - Responses mentioned more than once include bypasses and that most parts of the county have low levels of congestion.
    - What would you like to IMPROVE in terms of transportation in Troup County?
      - Responses mentioned more than once include improve congested areas and provide public transit.
  - Additional feedback recorded during the meeting
    - Troup County School System expressed concerns regarding N Davis Rd. Bypass turning into 4 lanes Highway 27 to Lafayette Parkway.
      - Near the area where Gardner Newman Middle School and the Troup County Board of Education are, there needs to be a center lane with 4 lanes going NB and SB with deceleration lanes for both. Similar situation in another location north of this intersection. Troup County Schools has submitted the drawings and GDOT provided more information on the existing project and the timeline (under design and part of a three-phase bypass project). GDOT District 3 said that they will check if the suggestions were received.
    - There are concerns about safety at the intersection of S Davis Rd. at Lafayette Parkway. This intersection has a lot of congestion on account of the medical center.
    - The attendees suggested looking at the Thread Plan (trail master plan) to see how the recommendations in that will coincide with new intersection improvements.
    - Team to also look at the study on Ray by the Georgia Conservancy.
- 4. Next Steps
  - The next advisory committee meeting will be in fall 2023 and will cover future conditions assessment, environmental screening, and potential improvements. The final plan will be presented at the final advisory committee meeting in late 2023 or early 2024.

#### 5. Polling Results

Below are the results of the poll questions that attendees provided throughout the meeting. Topics included: traffic congestion, draft goals and objectives, what is currently successful, and what do you want to improve regarding transportation in Troup County.

## Are there areas of congestion we should know about that were not identified on the map?

 Hwy 54/ Interstate 85 & Bass Cross Rd- 37,417 vehicles per 24
 Hogansville is only Troup County exit with no traffic signals.
 Industrial area in Meriwether County has new industry proposed that will increase heavy trucks using 85/54 interchange allowing for approximately 1,100 truck parking slips.

 Increased waste traffic trucks from Hwy 29 up Hwy 54 to Turkey Run landfills. This also impacts traffic at infication interstate.
 Hogansville was originally slated for design of roundabouts to for heavy truck and vehicular traffic that directly impacts.

| Not from my view                    | Non vehicular methods.   | Maintain existing road surfaces |
|-------------------------------------|--|---------------------------------|
| Replace the non-vehicular mode goal | Please consider areas of most impact. Hogansville<br>currently has no manufacturing but is highly<br>impacted by heavy truck traffic at and near the<br>85/54 interchange. |                                 |

## How Relevant are these Draft Objectives?

Reduce transportation-related crashes, injuries, and deaths. Maintain existing transportation facilities. Address existing and future traffic congestion. Provide for non-vehicular modes, such as biking, walking, and transit. Consider the overall social, land use compatibility, economic, energy, and environmental impacts of projects. Improve connectivity and accessibility between major travel destinations and population and employment concentrations. Incorporate green infrastructure, storm water management, and energy conservation into transportation projects. 36

## 2 Advisory Committee Meeting #2 Notes

09/08/2023, 11:00AM - 12:00 PM

Troup County Fire Administration Building, 2495 Hamilton Road, LaGrange, GA

#### Attendees:

- Troup County
  - Eric Mosley, County Manager
  - o James Emery, Director of Engineering and Development, Troup County Board of Commissioners
  - Corey Dunn, Transit Coordinator, Troup Transit
  - Patrick Crews, District 1 Commission Chairman
  - o Jenny Parmer, Community Development Director
  - o Ruth West, County Planner, Community Development
- City of LaGrange
  - Meg Kelsey, City Manager
  - o Bill Bulloch, Assistant City Manager
  - o Mark Kostial, City Planner
- City of West Point
  - o Ed Moon, City Manager
  - Steve Tramell, Mayor of West Point
  - o Dennis Dutton, Community Development Director
- City of Hogansville
  - o Lynne Miller, Community Development Director
  - o Niles R. Ford, Assistant City Manager
- Development Authorities
  - o Barbie Watts, Director of Promotions and Marketing, Downtown LaGrange Development Authority
  - o Vickie Brown, Hogansville Downtown Development Authority

- Georgia Port Authority
  - Wesley Barrell, General Manager of Inland Operations
- Kia Motors Manufacturing
  - o April Bartley, External Affairs Manager
- Troup County School System
  - Chip Giles, Transportation Director
- GDOT
  - o Matt Markham, Planning Deputy Director
  - o Andrew Torrey, Rural Planning Branch Chief
  - o Tyler Peek, District 3 District Engineer
  - o Adam Smith, District 3 Preconstruction Engineer
  - Beatrice Shakal, Policy Planning Coordinator
  - Dennis McEntire, District 3 State Transportation Board Member
- Modern Mobility Partners (MMP)
  - Julia Billings, Project Manager
  - Kirsten Mote, Principal-In-Charge
  - Freyja Brandel-Tanis, Transportation Planner and Engineer
  - o Matt Reeves, Transportation Planner
- Arcadis
  - o Jillian Bostwick, Project NEPA Planner
  - o Savannah Kimbrell, Planner

#### **Other Invitees:**

- City of Hogansville
  - Lisa Kelly, Interim City Manager
  - o Jake Ayers, Mayor
- City of LaGrange
  - o Dr. Willie Edmondson, Mayor
  - Development Authorities
    - Kevin Patrick, Chairman West Point Development Authority
- Arcadis
  - o Jaap Tigelaar, Project Manager
  - o Otto Clemente, Principal-In-Charge
- GDOT
  - o Harland Smith, District 3 Planning and Programming Coordinator
  - William Boyd, District 3/Area 5 Engineer
  - o Kelly Martin, Assistant Director Rural Metro, Policy & Freight Planning
  - o Vivian Canizares, Assistant Office Head for Rural & Metro Planning
  - o Jacqueline Williams, Planner
  - o Casey Langford, Metro Planning Branch Chief
  - Sara Darroux, Planner
  - o Merishia Robinson
- Three Rivers Regional Commission
  - o Jeannie Brantley, Interim Executive Director
  - Paul Jarrell, Senior Planner
  - LaGrange Troup County Chamber of Commerce
    - Connie Hensler, Chamber President
- Kia Motors Manufacturing
  - Stuart Countess, CEO
  - o Natalie Tullberg, Senior Manager Team Relations/Public Relations
  - Georgia Ports Authority
    - o Duke Acors, Director of Strategic Operations
#### Agenda & Notes:

- 1. Introductions
  - Troup County and GDOT gave introductions. All attendees briefly introduced themselves.
- 2. Study Purpose and Schedule
  - Modern Mobility Partners provided an overview of the purpose of the study and timeline.
- 3. Goals and Objectives
  - Study goals and objectives were updated based on the input that the Advisory Committee members provided at the last meeting.
- 4. Environmental Screening
  - Arcadis provided an overview of the environmental screening process. This process includes desktop evaluation of each project for nearby environmental resources that may affect project feasibility, cost, or timing.
- 5. Draft Recommendations
- Modern Mobility Partners summarized how each type of project recommendation was developed.
  6. Draft Projects Workshop
  - Áll attendees reviewed the printed maps and corresponding list of draft projects and provided feedback as listed in Table 2-1. The feedback focused on the draft projects, additional projects that should be added, and when projects should be implemented.

| Table 2-1 | Stakeholder | Comments on      | Draft Proiects |

| SR 219   | From 0.2 mi N of Pegasus<br>Pkwy to SR 1/US 27                                      | Lower Priority   |
| SR 219 @ Pegasus Parkway   |   | Higher priority, expected new developments coming  |
| SR 219/Mooty Bridge Road @ N<br>Greenwood Street                           |   | Higher Priority  |
| SR 109/Lafayette Parkway @ Patillo Road                                    |   | Suggested that it is not viable  |
| Upper Big Springs Road @<br>Callaway Church Road and John<br>Lovelace Road |   | Should mention realignment   |
| US 29 @ Bull St/W Lafayette Square   |   | Higher Priority, include protect left signal phase   |

| Project Name           | Extents | Stakeholder Comments   |
|------------------------|---------|--|
| Northwest Bypass Study |         | Observation that the 10-mile difference in<br>NW bypass versus existing planned<br>bypass may make it unnecessary;<br>however, this does not prevent the study<br>from being done, as it could be the<br>conclusion of the study |

## 7. Suggestions for Potential New Projects

### Table 2-2 Potential New Project Comments

| Location  | Comments   |
|---|--|
| SR-109 W of LaGrange  | Noted lots of Freight along SR-109 to/from Alabama; curious if anything was planned/if that corridor was considered  |
| S. Davis Rd @ Lafayette<br>Parkway                                | New intersection capacity and safety project   |
|   | problem with local and state signal timing differences.  |
| General Sidewalk &<br>Active Transportation<br>Projects           | Neighborhoods east and southeast of Piney Woods Lake   |
| US 29 / SR 14   | Passing lanes and deceleration, turning lanes (to Webb Rd)   |
| General Downtown<br>Westpoint Intersection<br>Improvements        | 9 <sup>th</sup> St, 8 <sup>th</sup> St, 7 <sup>th</sup> St, 3 <sup>rd</sup> Ave, and railroad crossings along US 29. Signal timing improvements, turning storage |
| US 29 @ 10 <sup>th</sup> St                                       | Dedicated turn signals / signalized intersection improvements  |
| US 29 @ 7 <sup>th</sup> St Rail<br>Crossing                       | Turning lane congestion & Digital message signs  |
| 3 <sup>rd</sup> Ave / State Line Rd<br>@ Oseligee Creek           | Bridge Rehab   |
| E 7 <sup>th</sup> Street  | Sidewalks (or complete street redesign)  |
| Callaway Church Rd<br>from Walmart/ inland port<br>to I-85/SR-109 | Comment/concern that there is no project addressing this stretch of road (note: this stretch is already 4 lanes)   |

www.arcadis.com

| Location             | Comments              |
|----------------------|-----------------------|
| Sewon Blvd           | Sidewalks, bike trail |
| Lukken Industrial Dr | Sidewalks, bike lanes |

8. Summary of Workshop Discussion

Below is a summary of the topics discussed by participants during the workshop. Project-specific comments are noted in the tables above, while general comments and observations and listed below.

- Freight
  - SR-109 to/from Alabama There is a lot of freight movement along this corridor.
  - Traffic concerns on Callaway Church Rd from Walmart/inland port to I-85/SR-109.
- Capacity
  - There will likely be expansion of use in the area southwest of LaGrange after Kia Pkwy expansion.
  - US 29/Vernon St from Ferrell Dr to Broad St Right-of-way does not allow for 4 lanes, but a 3rd lane can be added as center turn lane. This is a top priority.
  - Roundabout near GA-219, visibility and speed concerns near Greenwood St.
  - US 29 widening and safety down to West Point, poses concern as commercial traffic does not use often, usually only from Kia workers.
  - Traffic concerns between I-85/I-185 interchange on holidays and weekends.
- Transit
  - Agreed with project list.
  - Parking lot project will make the biggest difference.
  - The County does not have the capacity now to expand micro-transit.
  - There is a two-year plan for getting vehicles, drivers, and improving transit facilities.
     Primarily need better parking lots at bus facilities, nearing capacity.
  - Transit facility at Hamilton Rd
    - Daily pick-up and drop off locations:
      - Senior Center (Ragland St/Calumet Center Rd)
      - Pathways Center (Gordon Commercial Dr N of Lukken Industrial)
      - Hogansville Senior Center (Church St/Collier St)
  - Most riders are not using cell phone apps, so need to fully automate like Gainesville or Valdosta micro-transit.
  - It can be hard to integrate Department of Human Services rides with public rides.
  - Transit statistics
    - Approx. 20 public trips/day, 88 trips/day total
    - 23k trips/fiscal year
- Bypass
  - The bypass will impact school traffic.
    - Schools in this area Gardner Newman Middle and Callaway High.
    - 'Worst' intersection is at S Davis Rd and SR 109/Lafayette Pkwy.
- Land use
  - New residential projects coming near Hogansville Rd & Hamilton Rd.
  - Callaway land near NW of LaGrange, could prevent road connections (concerns of being redeveloped with new housing).
  - Concern about unknowns associated with undeveloped land between Hogansville and LaGrange.
  - 1,300-1,700 workforce housing units expected along S Davis Rd so widening on SR 14 Spur/S Davis Road needs to occur sooner.

- New fulfillment center near SR 219 at Pegasus Pkwy with nearby multi-family and commercial activity.
- Concern about large tracts of undeveloped land near S Davis Rd, down SR 219, up SR 29, and along lake. Development can greatly impact traffic patterns.
- New mixed use developed "Newman Property" near SR 219.
- New water line coming near SR 1/US 27/Martha Berry Highway/Hamilton Road, potential for new growth.
- Support for Kia parking, Kia Blvd maintenance, and bridge on Kia Pkwy.
- GDOT programmed projects not on the maps (added after the meeting):
  - PI 0018022
  - PI 0017139
  - PI 0016359

  - o Vivian Canizares, Assistant Office Head for Rural & Metro Planning
  - o Jacqueline Williams, Planner
  - o Casey Langford, Metro Planning Branch Chief
  - Beatrice Shakal, Policy Planning Coordinator
  - o Merishia Robinson, Program Manager
- Three Rivers Regional Commission

- Jeannie Brantley, Interim Executive Director
- Paul Jarrell, Senior Planner
- LaGrange Troup County Chamber of Commerce
  - Connie Hensler, Chamber President
- Kia Motors Manufacturing
  - Stuart Countess, CEO
  - Natalie Tullberg, Senior Manager Team Relations/Public Relations
- Georgia Ports Authority
  - Duke Acors, Director of Strategic Operations

#### Agenda & Notes:

- 1. Introductions
  - Troup County and GDOT provided a general introduction to the project. Modern Mobility Partners began the presentation and asked all attendees to provide a brief introduction.
- 2. Summary of Planning Process
  - Modern Mobility Partners summarized the planning process as well as key highlights from the existing conditions analysis. This included overviews of the forecasted population and employment growth; data on crash and freight traffic, and the baseline projections of congestion for the years 2035 and 2050.
- 3. Summary of Identified Projects
  - Modern Mobility Partners presented the identified projects. Projects were presented by the project categories, a total cost summary, and the implementation timelines. Project highlights were given for projects related to the LaGrange Bypass and improving capacity and connection to and along the interstates.
- 4. Next Steps
  - Modern Mobility Partners explained the remaining steps for the study and provided contact information for any follow-up comments.

#### 5. Open House

• The open house lasted for approximately 30 minutes and allowed attendees to view ten poster boards. The posters showed the entire identified project list with project details, assigned timeframes, estimated costs, and anticipated project sponsors. There were also posters with the projects mapped and the final evaluation results.

#### Table 3-1: Comments on Final Plan and Identified Projects

| Stakeholder Comments  | Response  |
|---|---|
| What happens with the plan document once it is complete? Will there be an adoption by the County or cities? | The plan will help Troup County and the cities make decisions about transportation infrastructure and investment. There is no adoption process necessary. |
| Will the final plan document be available online?   | Yes, the final plan document will be available through Troup County's website.  |
